"This test," said Doctor Bolton, "has great value. Suppose you have something that must be memorized permanently. If you know how long you can carry a thing in your mind after overlearning, *you know exactly when you must relearn.* You will then relearn it at the end of three or four or five days, whatever your span of forgetting may be, and when you have relearned it three or four times you will find that it is fixed *permanently* in your mind, and no more relearning is necessary. So, if you want to master the learning of anything, *learn it* to the point of repeating once, *overlearn* it to the point of repeating twice, and *relearn* it at periods of four to five days, for about a month.

"This is a much more effective process than trying to learn permanently at a single sitting, because our brains are so operated that *rest between periods of learning helps to fix things in our memories.*

"POETRY is easier to memorize than prose, because of its rhythmical presentation. And doggerel rhyme has been the means of making many people remember rules, dates, and incidents. Poor spellers, for instance, are all familiar with

> *I* before *e*,
> Except after *c*,
> Or when sounded like *a*,
> As in neighbor, or weigh.

"If you are a rhymster and making doggerel comes easy, *you have a master key to improving your memory.* It is the essence of wisdom to use the tools you have to do the work you want done. Fix names, dates, facts, by making rhymes. It is your natural aid to memory.

"Rhyme not only assists in rapid learning and permanent holding in the mind, but it is a *cue to quick recall.* Cues of any kind are valuable. But if you have no cue, one effective method is what is known as *the law of lingering.* That is, you make your thoughts *linger* about such facts as you *can* recall, until association brings forth the fact you want. In this lingering you must be sure to relax and not to struggle to remember.

"A few months ago a student asked me to write her a letter of recommendation. I could not at the time recall the name of the town in which she lived. But I did have *associations and distinctive marks.* I knew that the town was on the Atchison, Topeka and Santa Fe Railroad. I lingered along this path and found my mind turning to the name of a town beginning with T. But a mental search for a town whose name begins with T proved futile and my mind meandered to W. W proved no good. In despair, I was going for a geography, when suddenly there appeared in my imagination: 'Ottawa, Kansas.' The T and the W were present, but I had not lingered long enough to get them into proper place.

"As a last means of help, cease worrying. You are not losing your memory, but you may be piling facts into your mind with no method for storing and recalling them. Try to carry facts in your notebooks and not in your mind. Use your memory as the index to a filing system and let the files contain the bulk of the material, useless without the index, but cumbersome to carry with you."

List of Things to Be Seen in Picture Number One

You may see more than this list shows. But be certain that what you see *is there.*

1. Four persons in the picture.
2. All in a canoe.
3. One woman and one white man.
4. Two Indians.
5. The woman fair; the man dark.
6. One Indian with a hat on.
7. The others bareheaded.
8. Man and woman covered to waists with blanket.
9. Plaid blanket.
10. Old-fashioned clothing.
11. Attitude suggests elopement.
12. Bundle and two cans stacked between seats in front of couple.
13. Canoe covered with bark.
14. Propelled by paddles.
15. Stream swift.
16. Shore rocky.
17. Woods rough, suggest pines.
18. Stream winding.
19. Intent look on face of man in prow.
20. Broken trees on bank.

List of Things to Be Seen in Picture Number Two

1. Old-fashioned room.
2. Two people.
3. Man and woman.
4. Dog.
5. Woman in dark dress, lustrous, Empire style, high-waisted, puffed sleeves edged with lace. Neck low.
6. Hair dark, in knot at back, bound with white band.
7. Arms well shaped; hands cover face; attitude suggests grief.
8. Handkerchief on lap.
9. Tip of one slipper visible under hem of skirt. Skirt hem trimmed with two rows of ribbon or braid.
10. Woman sitting on fauteuil, chair of French design, with two arms but no back.
11. Slipper on fringed, figured rug.
12. Man opening door, right hand on knob.
13. Hat in left hand.
14. Hat suggests tricorn.
15. Hat trimmed with cockade.
16. Man's hair long, tied at back.
17. Head bowed.
18. Coat lighter than trousers, long, almost to knees.
19. Two buttons under pocket flap on hip, one button on side at lower edge.
20. Black shorts buckled below knees.
21. White stockings.
22. Black slippers with buckles.
23. Right foot advanced.
24. Door colonial, paneled, two short panels at top, two long beneath.
25. Far wall contains two portraits in fancy frames; left, of youthful lady in low-cut gown; right, of man with wig.
26. Beneath each portrait a silhouette, framed in oval, bow at top, decoration at bottom.
27. Right profile of the man; left profile of the woman.
28. Below silhouettes, sofa, upholstered, with wooden legs.
29. Before sofa, table with curved legs, white cloth upon it, trimmed with scroll border.
30. On table, glass vase containing two roses.
31. Basket of some kind of wire.
32. Table on figured rug.
33. Before table, chair with front legs curved.
34. Near center of room, small dog, light, looks like spaniel.
35. Floor of wide boards.
36. Right wall, grandfather's clock, with ornate top and small face over dial.
37. Right wall paneled to height of about three feet.
38. Woman sits by right wall, her fauteuil under mirror in ornate frame decorated with bird at top.
39. Reflection in mirror shows edge of a picture frame.

THE WHOLE FAMILY CASTS A VOTE IN BUYING CANDY

Whitman's finds a new way to "Sweeten" the value of the advertising dollar

STEPHEN F. WHITMAN & SON, INC., famous candy manufacturers, noted that other big advertisers had recently investigated *family buying habits.* These investigations indicated that buying today is influenced by the opinions of two or more members of the family.

To test whether candy also came under the rule, Whitman made their own independent investigation. They questioned the candy-buying habits of 6,000 American Magazine families in towns large and small. And 70% of the answers said the kind of candy bought depended on the consensus of *family opinion.*

No matter how luscious the bits of cream and chocolate, how bright the boxes, candy usually has to be known and approved by *two or more* members of the family in order to win a place on the family shopping list.

Whitman also asked the same group of people which magazine *the family as a whole* preferred. The American Magazine was the all-family choice in 56% of the answers—more than for all other magazines combined. These results also coincided exactly with those obtained recently by other large advertisers, advertising agencies, universities and research organizations.

Here then are two facts—now scientifically proven by a number of tests—for every national advertiser to ponder. *First,* that buying today is largely governed by the opinions of the whole family. *Second,* that The American Magazine offers the means of reaching the whole family in 2,200,000 homes, at one advertising cost.

We have some interesting data on these various marketing surveys which we will be glad to present in detail, without obligation to you. Write or telephone The Crowell Publishing Company.

Seven other national advertisers whose investigations check closely with those of Stephen F. Whitman & Son, Inc.

Campbell Soup Company
Colgate-Palmolive-Peet Company
Dunlop Tire & Rubber Company
The Hoover Company
National Piano Manufacturers Association

The Best Things

(*Continued from page 39*)

bably demands it," Nancy returned itedly.

Position, my eye! He ought to have ition enough to be able to do what he its to in his own house. Well, tell them 's a dress suit every night they don't d ever to invite *me!*"

They probably won't," Nancy said, the unhappy thoughts surging Lack. c would be so out of place in that ironment.

he day she left, with all her clothes fully refurbished and her new ones ressively placed in the top of her ık, Jack was ridiculously gay as he : her to the station. But just before stepped on the train he held her close, ıgh their good-bye was supposed to e been said.

Gee, I love you, honey!" he whis- d in her ear. "And I'll miss you!"

ROM the moment Nancy entered the tately doorway of the old Sloane house, knew that *at last* she was against the ıer background. And some subtle ıing of manner and behavior seemed escend upon her. She accepted the er, the white-capped maid, and the ınce of the furnishings as if she lived with them from infancy. She just the right things to Grace, who grown to look much older and more ified. She dressed for dinner in a m of excitement which flushed her ks and made her admit to herself that eally *did* look rather wonderful in her lace dress.

ıen she met her host. Her first im- sion was surprise at his youth. Why, ouldn't be more than ten or fifteen s older than Jack! But in his manner eemed to possess all the dignity and m of the ages. Such polish! Such *r faire!* And Nancy rose to the sion instinctively. Never had she more animated. Never had she made ıany clever comments on literature life. Her conversation sparkled with ıt bits of patter she had picked up and there. She even used her *mellow* h about the play. It was flatteringly ved by Mr. Sloane.

ust the words I should myself have n to sum it all up—that is, if I had clever enough to think of them," he d, with a gallant bow.

ace listened for the most part, a little y-looking, now and then putting in enchant sentence. Nancy and Mr. ıe tossed the conversational ball een them. And always by the ght look of admiration in his eyes, y knew that she had made an excel- impression.

e went up the stairs at last as if ings, and once in her own room she l before her mirror taut and tri- ıant. She could do it! She could her own on any social plane. She *ged* in a home like this, with con- l people! She was being wasted e she was! She meant to lie awake aste to the full the interesting bitter- of the situation, but she went sud- to sleep.

SO SMOOTH • SO FLAWLESS

CAN'T HOLD DIRT EMBEDDED!

YOU can't afford the time—or the effort — required to scrub smudges off ordinary paint. And your high-priced domestic help probably feels the same way about it!

Walls and woodwork painted with Barreled Sunlight can be kept immaculate by occasionally wiping with a damp cloth. The fine dust and dirt that sift indoors everywhere today can't permanently soil this paint enamel. It has no pores to hold dirt embedded.

•

Barreled Sunlight has a distinctive, rich depth all its own, and is guaranteed to remain white longest.

Remarkably easy to apply, too. Flows freely and spreads evenly, without leaving "laps" or brush marks.

Has such opacity, or "hiding power," that fewer coats are required.

Gloss, Semi-Gloss and Flat Finishes. All-sized cans and drums. Readily tinted any shade. Where more than one coat is required, use Barreled Sunlight Undercoat as the first coat. See coupon.

Also ask your dealer or painter about Outside Barreled Sunlight, the new *exterior* paint. Brilliantly, intensely white; velvet-smooth; richly lustrous. Lending new distinction to white-painted homes everywhere.

U. S. Gutta Percha Paint Co., 33-P Dudley Street, Providence, R. I. Branches: New York, Chicago, San Francisco.

Distributors in all principal cities. More than 7500 retail dealers.

A pure, lustrous white— easily tinted any shade

You can easily tint Barreled Sunlight any shade you wish. It is an "all-oil" product and blends readily with any good oil color, producing beautifully clear, lasting tints.

Dealers carry handy tubes of Barreled Sunlight Tinting Colors. Quantities of five gallons or more are tinted to order at the factory, without extra charge.

The new French panel heel in Iron Clads No. 922 at $1.50 a pair! Chiffon, silk to the top. No. 922 comes in the latest, loveliest shades of sunbronze, suntan, breezee, mistery, Manon, beach tan, Cuban sand, Reveree, mirage, light gun metal, evenglow, pastel parchment, pearl blush, grain, skin, atmosphere, white and black —size 8 to 10. If your dealer can't supply you, send us his name with your remittance and we'll mail your hose direct, postage prepaid.

Charm

. . . may be enhanced . . . even created by strict attention to dress details. And what detail is more important than a critical choice of hosiery?

Iron Clads are the natural selection of those who realize a lovely ensemble may be completely marred by mediocre stockings. Sheerly, yet firmly, woven, the delicate pearly lustre of Iron Clads melts angles and reveals unsuspected loveliness of contour. Their soft, silken caress exploits your charm as no other stocking can.

Economy, no less than charm, demands the unusual *wearability* and *washability* of Iron Clads. Repeated wear and washing can't destroy their delightful freshness. And there's an Iron Clad *guarantee* of satisfactory service or a new pair of stockings to prove it!

COOPER, WELLS & COMPANY
204 Vine Street, St. Joseph, Michigan

Iron Clad

Iron Clad

In the days that followed, Nancy felt herself miraculously reincarnated. She lunched, she drove, she dined with the smart, gay, glittering people who belonged in the Sloanes' exclusive circle: people who had read everything, seen everything, been everywhere. And though it took some skillful hedging sometimes, and some hasty dips into this or that fresh "classic," she managed to keep up her end of the brilliant conversational game at which they all seemed to be playing. She wondered sometimes if they really *meant* all those hard, witty things they said about—well, about marriage and love, for instance. If Jack could hear them he would say it was "the bunk." But of course he *would* say some vulgar thing like that!

There was one time when she always thought of Jack. That was when she looked out of the windows of her room, which Grace had chosen for her because of its quiet. She somehow expected each time to see a garden, but instead she saw black roofs and brick walls beyond the small cement court. She wondered how the new rosebushes were growing at home, and whether the peonies were in bloom. If they were, the perfume would come right up to the bedroom windows. It seemed strange for people to live all their lives without a garden.

Jack had sent her an absurd sketch of himself leaning on his rake, large tears dropping to the ground; a caterpillar, a June bug, and a worm, all greatly elongated, were weeping copiously in the path beside him. Below ran the legend: "We're lonesome without you in the garden." Grace had seen the paper on her desk and looked at it strangely. Nancy had explained it to her a little shamefacedly, for Jack had drawn his denim overalls with uncanny accuracy. Grace had not laughed. She had only looked and looked at the little sketch, and then laid it down quickly and left the room without a word. Nancy wondered if she pitied her.

AS THE days passed it was more and more clear that Mr. Sloane, who had now become Fred, enjoyed Nancy's society. He took her driving. He sat next her at the theater, whispering pleasant nothings in her ear. He spent long evenings with her in the library, while Grace read in the living-room, talking with a kind of hard brilliance of his work, of art, of literature, and of the world in general, always looking with a gaze of open admiration into Nancy's eyes.

And Nancy was a little surprised and very much flattered. She even went so far as to wonder what her life might have been if Jack had not appeared suddenly in the small town where she had been teaching, three years ago, and swept her off her feet with his ardent wooing! She even went as far as that, which, as every woman knows, is very far indeed. And she lay awake often now, too nervously excited from the strenuous, glittering day to go to sleep, and pitied herself. She wondered how she could ever go back to the narrow life at home—how she could ever again be happy with Jack.

It was at the beginning of the last week of her stay that she noticed Grace's serious, tired-looking eyes watching her and her husband. Fred had grown more eager in his efforts to amuse her. He had taken her to tea downtown when Grace had to attend a board meeting; he had borne her off to a studio party, the night Grace had a headache, and introduced her to a group of *literati*.

Nancy moved as if among the angels; though the brilliant repartee and sharp discussions were not at all of a celestial nature. Even Nancy's lately acquired sophistication was not quite equal to some of it. But she waved aside any feeling of shock, as provincial. She was really *living* at last, and was thrilled to the core.

THAT night Fred held her hand a long time at the foot of the stairs and stared boldly into her eyes.

"Must you really go this week?" he asked. "I'll miss you terribly."

And Nancy wept nervously into her pillow before she slept. She hardly knew why.

The next day was busy and important. There was a formal dinner party in the evening, and Nancy helped Grace with the details.

"I'll put you beside Mr. Griscom, who has just come from New York on business," Grace said, as she surveyed the table late in the afternoon. "He's a saturnine creature, but he owns a few little railroads and plays around with factories for toys. He's important, so he must be amused. I know you'll do it. I'll have to have the district attorney and old Mr. Price by me. I won't put you next your host tonight, for I want him to notice there are other ladies present." She smiled a wry little smile, and then turned swiftly to her friend. There was a catch in her voice:

"Oh, Nancy dear, I've been longing to say something to you, but I was so afraid you would put it down to petty wifely jealousy. Nancy, *don't*, *don't* take Fred's admiration seriously. Don't let it sway you a hair's breadth from—from Jack. You have so much in your life that I haven't. You have love, and laughter, and peace—all the best things! Don't ever make the mistake of selling them for husks. Fred, you see, isn't—isn't," she hesitated, and then looked at Nancy with swimming eyes, "isn't a good man. I'm just standing by, trying to do my duty till the big break comes."

When Nancy reached her own room she sat down limply. All the sharp tension of the last weeks, all the excited elation, were suddenly gone. She was conscious at first only of feeling very, very tired. Tired of trying to be witty and clever, tired of being constantly on the alert to please. Tired—she might as well admit it—of pretending to be something she was not. All that Grace had said stood out before her like handwriting on the wall.

She thought of Jack. He loomed before her giantlike in contrast to Fred Sloane's slim, elegantly tailored figure. Jack, with his nonsense, his banter, his slang. But with the clear, honest, adoring eyes. Jack, lacking indeed in a certain form of worldly polish, but true as steel. Jack, who might scoff at gray spats and free verse, but who never scoffed at honor. Jack, of the clownish antics and the big heart.

The best things! Grace has said that she, Nancy, possessed them. *Love and laughter and peace!* Those were the ones she had listed.

To College Men who want Summer Work

. . . and to those who are seeking permanent and profitable careers

Five hundred carefully picked college men will be added to the national sales staff of this company for special work during June, July, August and September.

These men will earn $1.35 per hour or more, depending upon the ability and effort of the individual. Each man will be given a thorough training in salesmanship and will earn while he learns. No previous experience is necessary. Requirements are merely sound health, good character and a willingness to work.

The college men we select will become, temporarily, important units of a world-wide organization. Four thousand men, doing similar work full time for this company, are conceded to be the highest type of merchandisers in their field.

Many men in positions of responsibility started with vacation employment and returned to become permanently with us after graduation. Earnings run as high as $5,000 a year . . . and considerably more for those who qualify for advancement.

Many college graduates now teaching in high schools and preparatory schools find summer employment with us a pleasant and profitable way to add to their incomes.

Our summer program calls for college men in practically every part of the United States and Canada. Those who "make good" and wish employment in 1930 will be taken back. Those who, after graduation, desire to make this company a permanent career will find large rewards and rapid advancement.

If you are a college man and this opportunity interests you, fill out the coupon below and mail it today. Applications will be considered strictly in the order in which they are received.

To mothers, sisters, sweethearts of college men. You know Fuller Brushes . . . how necessary they are in the modern home. Even 4,000 present Fuller Men are unable to keep pace with the increasing demand. We need the temporary help of college men this summer. Talk to students you know about this opportunity.

It was a subdued, tired-looking Nancy who went slowly down to dinner in her new evening dress. She had looked forward to this event as the great triumph of her visit. Now she sat down to the shining, flower-decked table, wondering what she could think of to say, so confused and weary was her mind.

Fred was apparently greatly interested in the young woman at his right. His eyes were resting upon her as admiringly as they had on Nancy. He hung eagerly upon her words.

A sick, shamed wave swept over Nancy. How easily she had been flattered! A voice at her elbow. Mr. Griscom was speaking:

"Do I have your name right? Is it Mrs. Blair?"

"Mrs. Jack Blair, from Woodlawn, New Jersey," Nancy smiled up at him.

The saturnine gentleman suddenly smiled back.

"Well, then, it really is the charming coincidence I almost dared to hope it might be. You see, I know your husband!"

Nancy was doing some quick thinking. Griscom? Griscom? Had she ever heard Jack speak of him? How awkward that she couldn't remember! Oh, *Griscom!* Why, that was the name connected with the big order Jack was so elated over, that frightful night when the Lynns came to dinner.

Mr. Griscom was going on:

"I've just begun turning some business over to your husband. Of course, he's a fine salesman, up in all the psychology of the thing, but it wasn't that which won out with me. It was his wonderful personality. When he finally did nail me, I believe I was as pleased as he was! He's the first man for years who could make me laugh! He's a regular tonic. Always in good spirits. Not just the regular social veneer pleasantness, but real, downright joy in living. Very rare, that!"

Mr. Griscom paused, but he had not finished.

"The truth about your husband goes deeper than that. He's not veneered at all. He's genuine through and through. No sham. He does his own thinking, and isn't afraid to hold his own opinions, even if they are old-fashioned. Great judge of character, too. Never seems to make a mistake. I wish," he added in conclusion, "that I could persuade you both to come up to my farm in the Catskills later in the summer. I'm a lonely old fellow, and it would be doing me a great kindness. You see, I'm really fond of this young man."

NANCY heard indirectly afterward that she had been very charming that evening; but she never knew what she had said. She only knew that as soon as she dared she slipped off to her own room and sank down at the window looking out over the spot where there should have been a garden. Certain facts were beating upon her brain: All that Mr. Griscom had said of Jack, and much, much more, that no one knew as well as she. Her eyes seemed suddenly opened.

But in the same flash she saw herself abased. Against his genuineness she saw herself as a shallow, selfish, silly little *climber!* Straining after what she fondly believed to be culture, posing and pattering her tidbits of secondhand knowledge to make an impression on people like the Lynns, who were, perhaps, in their turn, posing too; while Jack, with his naturalness, had made a friend of a really great man like Mr. Griscom!

But, oh, if that were only *all.* If she could fly back to Jack now with nothing worse than that on her conscience. The thing that burned deep was her disloyalty. She had been ashamed of him, and wished she were free! Those horrible thoughts had had no words, but they had crossed her heart, soiling it. And now, when she longed with all her might to go home and be again in his arms, they stood between her and her old place.

She looked sickeningly out on the little cement court that showed in the light of a wan city moon. It was a symbol of the life of that household: hard, cold, artificial. No sweet, living growth from the earth itself. No natural, spontaneous blossom of joy! Poor, poor Grace.

She hated meeting Fred's bold eyes again. And Grace's sad ones made her heart ache. She wanted to go *home;* but how could she until she had somehow absolved herself!

It was in the stillness of the early morning as she lay wakeful that a forgotten sentence of Mr. Griscom's came back to her.

"He's a wonderful judge of character. Never seems to make a mistake."

NANCY sat straight up in bed. Jack *loved* her Then she couldn't be all silly and selfish and vain. There must be something fine and stable underneath; the something that Jack loved.

She sank back with a sob of relief. There *was.* She knew it. Far below the little straining vanities that had made up her married life she knew that another woman dwelt waiting. The kind of woman who belonged in the small white house with the green shutters that Jack was working so hard to pay for, who belonged to the simplicity and reality of the little garden. That's what she really was when she got down to herself.

And, knowing this, she also knew something else: She suddenly knew what her *Next Interest* was going to be. Not a new club, nor the course in psychoanalysis, nor the lectures on social service! No! Something else. She had waited long enough for it. But she knew now. She knew!

And with the thought hugged tightly to her breast like a tiny, warm body, she fell asleep.

She left for home the next day. Her parting with her host was very bright, and with Grace very tender. She did not wire Jack. She wanted to surprise him.

It was late afternoon when the taxi brought her to her own door. There was no sign of Jack about the house, but Nancy surmised where she would find him. She dropped her bags on the step and stole around the lawn. There, by the peony bed, sat Jack on the rustic seat he had built. He slumped wearily.

She slipped up behind and put her hands across his eyes.

"Guess who," she whispered in his ear.

With a great spring he was on his feet, incredulous. She came swiftly from behind the bench, and his arms went around her.

"Why, Nancy, *honey!* Where in the world— Oh, *say*, but I'm glad!"

When she looked up at last she saw that his eyes were wet.

They sat together on the rustic seat, while Nancy drew in deep breaths of the scented air.

"Some swell dump, I suppose, at the Sloanes'! Quite a come-down now, eh?" Jack asked, a shade anxiously.

"A *come-down*," Nancy repeated indignantly. "Why, Jack, they never have this at all!" She made a gesture toward the garden. "City house all winter, hotel in Maine all summer! I wouldn't trade!"

"Met a lot of high-brows, I suppose?" Jack inquired later.

"Oh, yes," Nancy agreed, "lots of clever people, *so* much more clever than I am, or ever could be. But they seemed . . . they were—" Nancy paused. Then, very seriously, she went on:

"Do you know what those people in the Sloanes' crowd say about marriage? They say it's an outgrown institution, and that some day civilization will cast it off entirely. And at a studio party I was at, they all seemed to think that free love was the only thing for people who wanted to be spiritually honest, and that—"

Jack launched his big voice into the dusk with hearty finality.

"That's a lot of bunk!" said Jack.

Nancy's lips curved in a tender smile; but the quick tears came to her eyes. She drew a long, happy breath.

"Oh, I *knew* you would say that!" she whispered, and snuggled her head against his shoulder in perfect contentment at last.

You Can't Have Fun Alone

(*Continued from page 19*)

to go. You'd seen all the shows you wanted to see for weeks to come. You were fed up on that sort of thing.

"Well, I've found people who wanted to go to the theater; who were hungry for it and miserable because they couldn't afford it. And I've set them down in the best seats in the house where they could hear and see everything and be comfortable. In short, I've been doing things for a few people who couldn't do anything for me in return, and it's been a real experience."

THE souvenir postal card with the scrawled line, "Wish you were here," has been laughed at and ridiculed, but just the same it is an echo from the human heart.

It is a trite phrase, but it expresses an everlasting truth. It is born of the human wish to share our pleasures with our friends. It implies: "Here we are where the scenery is lovely and the breezes are cool; here we are by the ocean or in the mountains, away from the common tasks of the day; here we are at play—and we wish you were here. This is our joy today and we would share it with you."

To be the only one to see a glorious sunset is not enough. Always we long for someone else to share it with us.

One night my wife and I stood together on a cliff at Pointe Aux Barques, Michigan, watching the sun go down. It was a magnificent spectacle—almost terrifying in its beauty.

"I wish Jeff and Ella were here now," she said softly. "They would both enjoy this so."

The reason a secret is so difficult to keep, it seems to me, is that keeping it is not the really friendly thing to do. Our impulses rebel against it.

We have been told something in strict confidence. We have information in our possession which others would enjoy. It may be good news or bad news, but, good or bad, it would greatly interest certain people we know and love. And this faithful old friend of ours would enjoy knowing what we know. So we tell it to him—just to make him happy. Then he has something in his possession—given to him in the strictest confidence—and the difficulty is that he likes to share with others what he has or knows. He ought to keep it to himself, as he promised to do. We should have kept it locked within our breasts, as we promised to do. The trouble is that it burns and throbs and pounds away at us until we do share it.

I am quite sure that the only really good things in the world are those which you can share.

Could you go to a circus alone?

I doubt it. The last circus Bud and I attended together came to town a year or two ago. As we wandered about the grounds I saw one man who couldn't make a go of it alone. He had started out alone, but he soon discovered his mistake.

What attracted my attention to him was a sudden cry he made to a small boy staring at the colored posters on one of the side-show tents.

"Hey, sonny!" he fairly shouted. "Do you want to see the circus?"

The boy's eyes stretched wide. "Sure," he said. "Will you take me?"

"You bet I will," the man answered, grinning. "You and I'll do this thing together."

I was behind him as he stepped up to the ticket wagon. He knew I had been watching him and he turned to me with a sheepish grin and said:

"All I'd see after I got in there by myself would be some kid outside, itching to get in. There's no fun at a circus without a boy along."

I knew the manager of the show and I mentioned the incident to him later.

"It happens many times," he told me. "I've seen any number of men step up bravely and buy a single ticket. And then just before they get inside, they rush back and find a boy and buy a ticket for him and take him along. They just simply couldn't go it alone."

PETE ESTEY is dead now, so I may use his name. Pete was one of the rare souls in the newspaper world. The Chicago boys will long remember him.

Pete never made a great deal of money but he made friends and kept them. And one of the charms of Pete Estey's character was that he was always ready to

ese latest Gruens will double
ation joys. Like all Gruen
ons, they express the Guild
-to offer you in a fine watch,
eatest value for every dollar.

Your Graduation gift

. . . a GRUEN GUILD Watch!

Fortunate even the nobleman of centuries ago who might present to his son or daughter a guild watch.

Princes vied with each other in the possession of those famous timepieces! They knew how patiently, with what devotion to the finest tradition of his craft, the guildsman toiled over every one.

Today the modern Gruen Watch Makers Guild has restored this fine tradition in the art of watchmaking!

Every Gruen Watch is a product of this spirit, inherited by modern Gruen craftsmen from famous guild watchmakers of centuries ago.

PRECISION
Trade Mark Reg.

This GRUEN pledge mark is placed only upon watches of higher accuracy, finer quality and finish—none less than $50. Made only in the Precision Workshop

Look for the mark PRECISION *on the dial*

For Graduation, especially, is a Gruen Guild Watch appropriate.

It is more than a fine timepiece, the one gift every Graduate hopes to receive. It is more than a watch of rare beauty and timekeeping accuracy.

It embodies with these qualities a tradition of attainment, resembling the Graduate's own, to serve as a lifelong inspiration.

In style, too, the Gruen Watches pictured here are exactly the type your boy or girl would select.

Your Gruen jeweler—one of the best in your community—can show them to you, also many others to suit the taste of every member of the family. Prices $3500 to $27.50.

GRUEN WATCH MAKERS GUILD
TIME HILL, CINCINNATI, U. S. A.

Branches in various parts of the world

Engaged in the art of making fine watches for more than half a century

This emblem is displayed only by jewelers of high business character, qualified members of the Gruen Guild

When Thomas Edison

groped in the dark

IN 1859 Edison was a newsboy on the trains in and out of Detroit. He spent every hour he could spare in the public library "grappling bravely with a certain section, and trying to read it through consecutively, shelf by shelf, regardless of subject."

Admirable determination! Edison was destined to be well read, just as he was destined to become the greatest inventor of all time. But his early desire for fine reading was a blind groping in the dark. The books in a modern public library would take fifty lifetimes to read!

Now everyone can be well read

Just as America's greatest inventor brought light into the world through the great medium, electricity—America's greatest educator brought light to everyone through the medium of good reading. Dr. Charles W. Eliot, from his lifetime of study, selected the pure gold from the world's literature. Into a single set he assembled the essentials of a liberal education, the books that everyone must know to be well read. In the Five-Foot Shelf are the carefully selected writings of 302 immortal authors.

DR. ELIOT'S FIVE-FOOT SHELF OF BOOKS

(*The Harvard Classics*)

Carlyle once said, "If time is precious, no book that will not improve by repeated readings deserves to be read at all." Time nowadays is more precious than ever before. We cannot, like the young Edison, attack the countless shelves of public libraries. Probably none of us possesses the persistency and patience which guided his early reading. We must have only the really great literature, the books that make us think straight, talk clearly and increase both our power to succeed and our enjoyment of life.

The Harvard Classics answer these requirements to the last detail. Already they are read and cherished in thousands of cultured homes. They are constantly bringing keen enjoyment and deeper understanding into busy lives. "Reading," as Edison himself says, "will never take the place of doing, but it enables us to travel twice as far with half the effort."

The Five-Foot Shelf is not a "rich man's library." By the famous Collier plan these wonderful books are brought within easy reach of everyone. Do not put off finding out more about this invaluable set. Mail the coupon today!

Since 1875 COLLIER Good Books

share what he had with another who had less.

For that reason, Pete Estey remained E. LeRoy Pelletier's friend to the end. Roy Pelletier and Pete had been comrades in hardship. Pete never lived to know luxury of his own, but Roy Pelletier later found fortune. He had a country estate at Orchard Lake, Michigan. Here Pete Estey always lived and played whenever he visited Detroit. It was his home.

"You know," he said to me, "I own Roy Pelletier's farm."

"You own it?" I said in surprise.

"Sure. He gave it to me. Of course he keeps the title to it and pays all the expenses, and hires and fires the help, and buys the blooded cattle, and builds the expensive chicken houses, and loses money on the apples and the currants and the milk and the eggs. But aside from that, the place is all mine. I can use it whenever I want to. I can go there at any hour of the day or night and my bed is always ready for me. The servants wait on me and do everything I ask. I have Roy's expensive eggs for breakfast and his prize-winning poultry for my dinner. Fact is, I do just as I please out there. If that isn't owning the place, I'd like to know what it is!"

WHAT Pete didn't know was that he was only a partner in that beautiful estate. I owned it too in those days. The orchards were mine, just as they were his. I could go there and know them in blossom time and fruit time. I could have all the apples and cherries I wanted.

And the curious thing about it is that Roy ceased to love the place after Pete Estey died and some of his other friends ceased to make use of it. Now it is subdivided and for sale. This might never have happened if Roy Pelletier's friends hadn't bought summer places of their own.

I spoke to him about it once and he said in his characteristic happy way:

"There's no fun doing anything for the rich. Entertaining people who have as much or more than you have is just a waste of time and good material. You haven't a thing to offer them which they aren't already tired of. It's all right to live your life with the people you like and it's fine to have powerful and influential friends. It's nice to know the Somebodies and have them call at your home and be on easy terms with them.

"But if you want to be genuinely happy and feel just a little proud of yourself, give your love and a part of the good things which have come to you to the Nobodies. Share your good fortune with those who have less than you.

"There are too many people on this earth administering their medicines to the strong and healthy. They're feeding the already overfed. I like to feed hungry people. I like to have guests out on this farm who wouldn't otherwise see an orchard in bloom. I like to take shut-ins out automobile riding and poor boys to circuses. And another thing: I never get quite the fun out of this place that I do when I've got a few friends out here to whom everything is new and beautiful.

"I don't say that I'm not proud of my rich friends. I am proud of them and fond of them and grateful for their friendship. The point is that I can't make them any happier than they now are. I can be

Digitized by Google Original from UNIVERSITY OF IOWA

th them and walk with them and visit th them, but I can't do anything for em which they can't do for themselves. "I have other friends, though, who do ed me. When they are in trouble, there something I can do. Gifts should ten burdens. They should gladden arts and enrich lives. Why give a gold tch to a millionaire who can buy any tch which strikes his fancy? If you lly want to make somebody happy, e that gold watch to the patient, plod-g friend—the father of a family—who never been able to afford that bit of ury for himself. Slip up behind him e day, blindfold his eyes, remove that -fashioned timepiece from his vest ket, and put a good watch in its place. Then ask him what time it is, and d off and see what happens to that n. If you're a keen observer, you'll see ired old heart start in to pump as it n't pumped in years. You'll see pride joy and gratitude all jumbled to-ner, and you'll have the satisfaction of wing that you have made one man py on this earth.

HAT'S Roy Pelletier's philosophy. How different from the philosophy of ther man I knew in my reportorial days se name I am not going to mention. was a politician and held public office years. I was with him one day when or, dilapidated old darky entered. Hello, Uncle Mose," he said. "Glad ee you; glad to see you! Would you a cigar?"

he old darky delightedly accepted, the politician said to his secretary: Will, give Uncle Mose a couple of e good cigars in the second drawer." t of the second drawer came a box e cheapest excuses for cigars I have seen. The grateful old darky had culty in getting one lighted. Only a entirely devoid of taste and choice I have endured it. After he had left, wily politician grinned and said: w, Will, get out the regular cigars." out of another drawer came a choice d.

keep these for my friends," he ex-ed, "and those cheap ones for the callers."

thought about that for a long time wards. It may have been good my, but it was poor giving.

is practice isn't confined to poli-s. It runs all through our social m.

o-and-so are coming to dinner," says roud lady to her maid. "They're poor old friends we have to have in a while, so you needn't get out the silver or go to any trouble. Just get ordinary meal—anything will do em."

e poor friends aren't used to style. urse, they're not. They never get a e to see it in action. You are their friends, but you keep all your style for the higher-ups. Don't do it. Pull out the good silver for the folks who don't have it at home. Light the candles in the best sticks; get out the costly dinner service and the shining glass and get up a real dinner for them. They'd like to see that good silver; they'd like to handle it. They'd like to try their appetites on a course dinner. If you really have asked them out to make them happy, go the whole distance. Give them the best you have. That's real hospitality.

Hey, you, son o' mine, get this into your head: The pretty and popular girl at the ball can have all the dances she wants. You needn't worry a minute about her. She won't miss you if you don't ask her to dance with you. You're not making her any happier by crowding your attentions upon her. But over there in the corner is a little girl, rather plain and slow and backward. She's having a miserable time. These boys are all so busy chasing the butterfly that they can't see her all alone. Beat it over there and make her happy. Give her your politest bow and your finest manners, and dance with her. She may be a better dancer than the butterfly and she may not—but don't you care—you dance your best with her. Make her happy.

Don't do it grudgingly because you consider it your duty. I'd rather you'd stay away from her than make her feel worse than she already feels. Dance with her because you want to; dance with her because she's a girl and at the party and is entitled to your attention and her share in the enjoyment. Dance with her because you want her to have just as good a time as the butterfly. In that spirit you will have as much fun as she does. Maybe more.

IT'S a queer world and we're all queer people in it. Apparently, we are put here to play the game of life without knowing much about it. But the rules work whether we know them or not, whether we obey them or not. Here are some that never fail:

Loneliness is the price the bachelor pays for his freedom.

Loneliness is the price everyone pays for selfishness. If you take, you must give. The things you keep to yourself turn to poison. If you cease to think of others, others will cease to think of you.

Try to go it alone and you'll soon find yourself in miserable company. The funny thing you have seen is of no value until you have told it to another. The solitary laugh yearns for an echo.

The garden is lovely today. The zinnias and coreopsis and nasturtiums are at their finest. Keep them all to yourself and they'll go to seed before the week is out. So you gather an armful of them for your friends. What good are flowers if you don't give some of them away? Who would want the loveliest garden in the world if he had to look at it alone?

EFT of the sense of hearing, as well as of sight, Helen Keller hears ong of the whippoorwill; she knows the glories of the sunset and alm beauty of moonlight; even the majesty of Niagara is very real to Next month she tells you how she sees, hears, and lives through a ic sense which, allied to her acutely developed senses of touch and , enables her to apprehend and appreciate the beauties of nature. u read her article it will seem incredible to you that Miss Keller never seen with physical eyes one thing of which she writes.

American School, Chicago

Charter. The School was chartered in 1897 as an educational institution.

Not for Profit. Being conducted as an educational institution, not for profit, it is exempt from all income taxes.

Satisfaction Guaranteed. The School guarantees every graduate satisfactory instruction or his money back.

Home-Study Council. The American School, like the home-study departments of colleges and universities, is not a member of the National Home-Study Council.

Get Ready for a Better Position

You want to earn big money—steady promotion. Are you prepared for the position ahead of you? For a more responsible position at better pay, a fairly good education is necessary. To write a sensible business letter, to prepare estimates, to figure costs, and to prepare reports, you must have a certain amount of training. Many concerns will not hire men who are barred from promotion by the lack of elementary education.

If You Have Not Completed High School

and are under thirty, we urge you to do so at once. If you can't go back to your local high school, take our simplified High School Course. We use the same standard textbooks as your local high school and will give you equivalent training. Get at once the foundation training required for success and big money. YOU CAN DO IT.

If You Have Completed High School

you are ready to specialize in some well-paid trade or profession: Architecture—Drafting—Electrical—Mechanical—Business—Automotive Engineering, etc. A knowledge of higher grade work brings promotion. The work you are doing today fits you to continue doing it. Promotion doesn't mean longer hours—but shorter hours and more pleasant work. It is the reward of the man who has fitted himself for the more important positions.

Qualify for a Better Position

To prove to you how easily and quickly you can learn by our home-study method, we want to **send you samples** of our special lesson papers. We guarantee you **satisfactory instruction or your money back** on graduation.

Let us show you how to get on the road to success. Write today. It costs you nothing but a stamp.

How America's Secret Agents Caught Germany's Master Spy

(*Continued from page 53*)

touch with highest and lowest. In the same day he talks with Walther Rathenau, head of the commercial staff at the German Legation, which we have long suspected did legitimate business through the front door and secret service through the back; then with a bank teller accused of theft, who the same day gets a first-class Swiss lawyer and provides high bail."

"We have heard something of it," the American said. "The man follows in Stieber's footsteps."

"In Stieber's crooked footsteps!" the Frenchman exclaimed. "That degenerate founder of the Prussian secret service used every base means to force men to work for him. Here in Switzerland this Master builds an edifice like Stieber's Green House in Berlin, where, through the lowest desires, through lust, and avarice, then through threat and blackmail, he bent all to his purpose.

"A Mephistopheles!" the Frenchman cried, with despairing rage. "He does us more harm than half their German generals. He steals the British signals, and destroys more airplanes than Richthofen. Every day many French and British and Italian and American soldiers die because of him."

THAT affair, which the French Chief had called terrible, might have been unsolved but for events that had happened in Germany before the World War began or was even dreamed of by normal, happy people. Then, a family of such people, *wohlgeboren*, of position and means, lived in a picturesque city of the romantic Rhineland. They had peace and comfort, busy days and happy evenings—father and mother; the daughter, Margrete, blue-eyed and fair, always laughing; two boys, one straight-backed, ruddy, proud of his uniform of officer in a crack German regiment. How happy they were, they and their American friend and guest, when the young soldier was ordered to join the Kaiser's personal staff.

"I feel as I felt in 'seventy when I won my Iron Cross," said his old soldier father, as they bade farewell to the new aide-de-camp of their emperor.

"It is a great honor," he confided to the American, "but our Kaiser is strict with his personal staff. What an opportunity!"

A few days later the American had to leave reluctantly, to say good-bye to Margrete with her songs and laughter, standing arm in arm with the other brother, who must find a career less arduous than the army. They had corresponded, then suddenly the letters from Germany had stopped coming. Then had come the war, and though the American had wondered often, he had heard no more. When the United States entered the war, the American, like many who knew Germany, had been assigned to secret service work in Switzerland. And now he had been asked to help hunt The Master.

On this task he concentrated eagerly, studying papers in The Master's dossiers in French or American files, cudgeling his brains day and night, seeking odd haunts, watching every face. And so, because he courted Lady Luck, she smiled on him. One day, out of the procession of faces in streets, cafés, theaters, that he scanned intently, he caught sight of a familiar one. It was the face of the slight, home-keeping younger brother of the peaceful Rhineland days. But how changed!

The body, slighter than ever, was bent a little as if under a weight. The face was emaciated, eyes staring from haggard, putty-colored cheeks. The American was shocked. A rush of old memories made him follow the German, who was in dark civilian garb, down a side street, to slap him on the back and cry his name in German.

Startled, the man turned, then grasped the American's hand with both of his.

"We are still good friends," he said. "Your Wilson has said it is only the Imperial German Government that America is fighting. You and I are not enemies!"

They talked for a few minutes, the German seeming always tense, controlling himself with difficulty. No wonder that his appearance had shocked the American. He told that he had been discharged from the army as consumptive. Then he reverted to President Wilson—the American part in the war. Was it true that the Americans were really fighting to dethrone the Hohenzollerns, help Germany free herself? Again and again, he asked about that with a fanatical earnestness almost gruesome.

"This man," thought the American, "is keeping something to himself, and it's nearly killing him." And aloud he said: "What are you doing in Switzerland?"

The German's face contorted painfully.

"I am doing—government work," he said at last; "work that I hate."

"Government work—that I hate." The words leaped into fire before the American's eyes. What had he learned in the secret war?—"Distrust everybody. Secret service knows three powerful motives: patriotism, hatred, greed. Use them." But how? Which was the key to his friend's secret? Calmly and deliberately the American decided to use all the craft, tact, resource he had to probe the German's mind.

"IT IS not a nice thing," he said to me ten years later in his quiet American home, "to wheedle and goad an old friend into telling his inmost thoughts. But war is war. No one who does not know now must ever know who that man was."

Then, on promise that the German should be called, as the American secret service really called him, "Zero," the American retold the poor fellow's horrible story. He had heard it first, there in Berne, after hours of talk, in which Zero had refused, with fearful reluctance, to mention "the good days before the war." Suddenly, he gave in completely.

Their pain wrings your heart

A PITIFUL scream. Blanched faces . . . The pain, the anguish of burns . . . later the cruel disfigurement of scars!

Where is the mother who does not fear it—this danger that may come, who knows when?

But you can be prepared, today. The pain of the most frightful burn yields to Unguentine—the *antiseptic* surgical dressing 8 out of 10 hospitals use.

Almost instantly, Unguentine soothes. It safeguards against infection. Clean, quick healing begins. And in nearly every case—not a scar remains.

Keep a tube always ready in the bathroom. Keep extra tubes in the accident danger zones; kitchen, office or shop and auto kit. Buy Unguentine today. At your druggist's—50¢. Send for free household manual, "What To Do," by M. W. Stofer, M. D. The Norwich Pharmacal Co., Norwich, N. Y. Canadian address, 193 Spadina Ave., Toronto, Ontario.

"Not a scar was left"

"Our little girl fell against the heater while playing. When I snatched her away bits of skin adhered to the stove . . . I applied a thick coating of Unguentine . . . Now her chin and neck are almost well and her hand and arm have healed nicely."

"Tommy was toasting marshmallows . . . his little linen blouse caught fire . . . the mother of one of the other children beat it out with her hands . . . By the time I was called they had put on Unguentine, which soon soothed the pain. There was no scarring. Believe me, after that experience we have never been without Unguentine!"

Now the new Unguentine Soap for tender skins

forget the habits of a lifetime and betray this detested servant of a detested ruler and government? Repeatedly the American assured him that would help bring to Germany the democracy for which the Americans were fighting. He used every argument he could think of—the invasion of Belgium, the Lusitania, other acts of the Imperial German Government.

"All the world fights against that Government," he cried. "Why shouldn't you? It has fought you, killed your brother and your mother, ruined your sister, wrecked your health. If you don't take this chance, it will be on your soul until you die."

Finally, he won.

"GOD help me, I'll do it," Zero whispered, and he began to tell what he knew about The Master. He could tell more than almost anyone in Switzerland, but not all at once. Fear would seize him, or some vestige of loyalty to the Fatherland of before the war. The American trembled lest The Master's figure, just assuming tangible shape, should melt away before flesh and blood could be caught surely. Conferring with the chiefs, French and American, searching records, he shaped a cross-examination of Zero as comprehensive as it was hazardous. Now that he knew Zero's connection with the German secret service, he knew they could not be seen together. So each meeting must be in a different place, always one well hidden. Danger was constant, and the American carried to these trysts revolver and blackjack. Always in the back of his mind was the thought, "Suppose he is leading me on, after all."

But such of Zero's information as could be checked up, proved true. Then, at a night meeting in a forest on the outskirts of Berne, the American pressed the German to "Come clean," and Zero promised.

"Tomorrow morning," he said, "take the early train for Zurich. The last compartment of the last first-class carriage. Come alone."

The American came alone, but even then, as with one hand he opened the door of the last first-class compartment, with the other he held in his pocket a Colt automatic. There might still be a trap. At first he saw nobody in the darkened compartment, then a hoarse voice whispered, "Take this." Zero, paler than ever in the half light, crouched in a corner. He pushed a violin case into the American's hands.

"It's all there," he gasped, "inside the violin. Put on these"—he handed the American a long, flowing tie and a big-brimmed black hat—"and get off at the next station."

Zero scrambled out, and the train started.

A few hours later the American and his chief brought strange notes from the violin, notes written upon the thin paper used for spy reports. Time after time they had wondered: "But who really is The Master?" Here at last was the answer! His full stature stood revealed.

He was a man of mark, of influence and power in Germany before the war. Social success had been added to professional prestige. He was widely cultured; he spoke seven languages; he was an amateur actor and a master of make-up. War in 1914 found him a *Syndicus*, a municipal councilor. As officer on the Western front, he won the Iron Cross. Wounded, they told him:

"You can do bigger things in secret service."

His dramatic sense influenced the decision, then helped him create and sustain his three personalities as he spread his nets in Switzerland. Attached to the commercial staff of the German Legation at Berne, he strove to outwit the restrictions of the Swiss government, under Allied pressure, upon trade with blockaded Germany. Introduced to powerful pro-German Swiss business men and bankers, having ample funds, he engineered daring deals. He evaded the Swiss regulation that no cotton goods could be exported to Germany by shipping there thousands of cotton nightshirts of Falstaffian proportions, eight feet long, balloon-sleeved, with a few stitches of embroidery. "Embroidered goods" could go. Rubber he sent labeled "Glue." Ruses failing, he bribed customs officials passed anything. To conceal his smuggling, he set up a brokerage office and imported to Switzerland two million francs' worth of merchandise a month—which crossed into Germany. As dummy head of this office he installed the sickly Zero, who seemed an easy tool.

Unavoidably he had let Zero see how he not only supplied the Fatherland illegally—despite a blockade he and most Germans considered cruelly illegal—but made himself super-spy, super-counter-spy, spinning a web that enmeshed hundreds, thousands, of others.

AS SPY, he, or others for him, conducted a little school in Berne, where education was sometimes compulsory. Some pupils were Alsatians or Lorrainers from among the interned Germans whom Captain von Einem visited; some were under world characters, accomplished crooks recruited by Herr Michaelsen; some were Swiss, bribed, blackmailed, threatened, by The Master. Some were loyal, patriotic Germans who did the work willingly. They were taught how to get into France, the parts to play when they got there, what information to seek, how to report. All too many returned safely.

As counter-spy, The Master loved to undermine the Allied Intelligence. Twenty-one Frenchmen caught and snuffed out just before the German Spring Offensive may have been his greatest single stroke, that won him the valued German decoration of the Order of Merit. But two hundred, not twenty-one, was the total of his victims. Two hundred Allied agents had stumbled into The Master's web, which caught them in barbed wire hidden in high grass. When he could not find out through his own secret service, or from his friends in the Swiss police, he got from a traitor.

As the French Chief had feared, there was in the French secret service an "agent double," who had worked first in Switzerland, then in France. He had sold out The Master, and he, more than any other man, had been responsible for the twenty one being tracked down and shot. It was not long before this man faced a firing squad in the blue uniforms of the French Republic he had betrayed.

To mask his work, The Master

ANTIQUATED METHODS

to protect beautiful teeth and gums

Today we know that first you must guard The Danger Line from acids

WOMEN who suffer from slow poisoning by decaying teeth and infected gums may not be actually ill. But they may find charm and beauty waning. For, lack of vitality makes faces old. Pain and worry soon cause wrinkles.

It is recognized today that the most serious dental troubles begin at The Danger Line—where teeth and gums meet. In the tiny V-shaped crevices there, acids attack the teeth and irritate the gums. And these crevices, particularly those between the teeth, are beyond the reach of any tooth-brush.

The Squibb Laboratories realized this several years ago, and, upon the advice of prominent dental authorities, they developed a dental cream that not only cleans perfectly . . . but also protects the teeth and gums against the dangerous acids.

Your physician, your dentist and your druggist will tell you that Squibb's Milk of Magnesia, from which Squibb's Dental Cream is made, is the finest you can buy. It is pure and pleasant to take because it has no earthy taste. Its unsurpassed antacid qualities and mild laxative action make it also truly valuable in promoting proper alimentation.

Physicians and dentists have long recognized that Milk of Magnesia is the most effective of all products for neutralizing those acids which attack the teeth and gums. Squibb's Dental Cream contains more than 50 per cent of this safe, pleasant antacid—enough to neutralize the mouth acids at The Danger Line and give protection long after use.

Don't risk your health and charm another day. Consult your dentist regularly. Get a tube of Squibb's Dental Cream—made with Squibb's Milk of Magnesia. It contains no soaps, no grit, no abrasives—nothing that can injure the most tender mouth. Use it tonight. Then you may be sure that your teeth and gums are safeguarded. At druggists—40 cents a large tube. E. R. Squibb & Sons, New York, *Manufacturing Chemists to the Medical Profession since* 1859. The Priceless Ingredient of every product is the honor and integrity of its maker.

Listen in every Friday evening from 7.15 to 7.30 Eastern Standard Time over Stations: WJZ, WBZ, WBZA, WHAM, KDKA, WJR, KWK, WREN, WTMJ, KOA, KSTP, WLW, *for interesting talks on the preservation of health by eminent authorities through broadcasting facilities provided by E. R. Squibb & Sons.*

aken every pains, aided by his Swiss olice friends. They told him whom they uspected as Allied agents, and when he ave them confirmatory evidence, they ept him out of it. He appeared openly ut twice: at the Brestline and Margeot spionage trials, and then only in one of is identities, without revealing the Iaster Spy.

But the hand of The Master slipped vice. He did not fathom Zero, and in ie character of Michaelsen he permitted imself a gay life that could not but react. here were not alone the apartments in erne and in Zurich. There was a seluded villa at Thun, across Lake Conance from Germany. A convenient spot r The Master. It was guarded carefully. swift motorboat was always ready.

That was the tale the notes from Zero's olin told to the two American secret rvice officers in Berne that summer day 1918. Not an incredible tale to them, no knew the labyrinth of intrigue in vitzerland and could check by other formation The Master's part in it.

"We've got him," said the American nief. "This clinches the thing. It's nat the French have longed for. We'll ve it to them—"

"If our American service gets the edit openly," he explained, as the unger man looked disappointed, "we se our greatest advantage in this game. ow they all think we don't know anying. Let the French appear in it—and rough stuff. There's enough to put m behind bars in Switzerland for years."

The Chief rubbed his hands cheerfully. "Guess we've done a little Master ying ourselves," he chuckled.

So, triumphantly, the French Chief owed to someone higher than any police icer his proofs of The Master's violation Swiss neutrality. The Swiss officials re amazed. This man was an important rson, a friend of many prominent Swiss. ll, Swiss police went to the Berne artment, where French agents had been guard against a "tip-off." The knock the door was unanswered. They burst open and caught The Master, von nem, and Herr Michaelsen all in one.

OOKS and papers in the apartment and in Zurich bore out Zero's charges, licated still greater flights of The Mas's genius. After the first Russian revoion of early 1917, the German secret vice had taken Lenin from exile in itzerland through Germany to Russia, his promise, when he had seized power, dissolve the Russian army which still ed the Germans and make peace with m. Some men prominent in Allied ntries had begged that Lenin and er Bolsheviks with him be assassinated. t they had gone safely, in their "sealed in," with what result the world knows. ere seemed to the Americans some dence that the hand at the throttle of t train had been The Master's. Proof that would be highly valuable as rmation and propaganda in the highly sitive Europe of 1918—might even uence events in Russia. Was there h proof?—this question the Americans ed Zero by devious ways.

In the enclosure of the Lake Constance a," he replied, "is an outbuilding ering a cesspool. In a suitcase hanging a peg under the ledge, he kept very important papers. Look there, at once."

That suitcase never was found, for, secretly though he had moved, a few of The Master's satellites besides Zero knew something of his methods. They were frantically covering his trail. Powerful friends, German and Swiss, went to work with equal alacrity—Germans to save a Master Spy; Swiss, lest the story of his relations with their police come out. So The Master had one of the best Swiss lawyers, who discovered that confinement, his old wound, and the humiliation of accusations had weakened him physically and mentally. He was transferred from prison to a private asylum near Zurich, where his condition was pronounced not serious enough for strict confinement.

One evening, as he and an attendant amused themselves in the billiard room, gongs rang. There was a cry of "Fire!" The attendant ran out—but first he opened the window. To that window the patient leaped, seized a rope dangling there, lowered himself to the courtyard, and ran to a corner of the surrounding wall. He tossed over a handful of pebbles, and the top rungs of a ladder appeared. He snatched it, and was up and over like a flash, to jump into the tonneau of a waiting automobile that started instantly—an automobile of the German Legation. To Lake Constance it sped, to Arbon, where the motorboat was waiting.

NEXT morning the Chief of the American secret service found on his desk an intercepted telegram from Friedrichshafen, in Germany, to the German Legation in Berne. In code, it said:

"Arrived here safely last night."

With The Master out of Switzerland, his secret service broke up. It had been so secret that, lacking him, most of its wheels ceased turning. Few others had known part of its ramifications; not even Zero had known all. Infuriated at such a blow, the Germans sought an informer, at least a scapegoat, and fixed upon him. They had the Swiss arrest him for a minor passport violation.

Feeling cold fingers close around his own throat, in an agony of fear and physical weakness he sent word to his sister, Margrete, to avenge whom he had got into this situation. Hoping that through her they could get proofs of her brother's guilt, the Germans let her come. At a heartbreaking meeting in the Berne prison Zero begged her: "Go to the American. He is our only hope."

She went, and would have bravely told again the story of what had happened to her, had not this old friend of happier days gently stopped her.

"You needn't tell me that," he said. "Your brother has helped our cause, and I will help him."

He was breaking one of the ironclad rules of secret service:

"Never acknowledge a spy or an informer who has served you and been caught. Even though you have paid him secretly, deny it, disown him."

Zero had neither asked nor received a cent. But to the young American other rules seemed to apply, too—the rules of humanity, of friendship, of chivalry, even of common sense, for suppose Zero, despairing, revealed the American's part in the affair? He sent away a Margrete weeping tears of joy.

Spring-Air

. . . easier to handle than a mattress . . . . far more sanitary . . . . . by all odds more comfortable

The days of your heavy, clumsy mattress are numbered. Spring-Air is here to convince you that it is more wonderful than any mattress can possibly be. Actually, to handle this new bed-cushion is but child's play. The removable cushion covers can be cleaned like the rest of your bedding. Spring-Air is forever fresh, always renovating itself. You can't wear out the life or shape. Indeed, Spring-Air has stepped so far beyond the limitations of the old-style mattress that the output for our first two years was entirely taken by over 600 of the most prominent hospitals and hotels. Why they enthusiastically endorse Spring-Air is explained by the free book, "Sleeping Relaxed", which the coupon brings.

Makes You Sleep Relaxed

Amazing as are its practical advantages, your greatest thrill will come from the comfort of Spring-Air. It will make you sleep more comfortably than ever before in your life. It will invigorate you with a new feeling of vitality and poise. All because the patented construction of this bed-cushion compels your body to sleep relaxed. We know this sounds too good to be true and so we ask that you sleep on Spring-Air for ten nights at our expense. Not one penny will it cost you to personally discover the benefits of Spring-Air. You will not be urged to buy; simply decide for yourself if your present mattress can be tolerated once you have slept on Spring-Air.

You Can Save $20 Now

Now, while we are directly introducing Spring-Air on a free-trial basis, the price is considerably below what dealers would charge. Soon this price will be raised. Now is the time to save more than $20 by returning the coupon today.

Good Swiss lawyers took fees in dollars as well as marks, and in a few days Zero was out of prison, but not safe. His belongings had been ransacked. Wherever he went he was followed. In frightful anxiety, more haggard than ever, he sent word by his sister again:

"For God's sake, get me out of Switzerland."

FOR some days and nights Zero and his sister kept in hiding, guarded by an armed member of the American secret service. Then, by night, their friend took the devoted pair to the Italian border, and left them, in full belief that they were safe at last from the Empire that they hated and had helped to ruin. From that day to this, no word has come from them. Did the German secret service reach out and strike them even in Italy? Did his dread disease claim Zero? Their American friends who tried to save them hope not—but they do not know.

The defeat of The Master is the war exploit of which the American agents are proudest. It won for both participants decorations. The principal actor, Zero's friend, whom the French Chief begged for aid, has another token of which he is proud, a large photograph, autographed "John J. Pershing."

The Master, when last heard of, had resumed his pre-war identity and was director of important works in one of the largest cities in the thriving German Republic.

There were other American secret service affairs in Switzerland; that of the big-eyed woman spy, "Bella Donna," for instance. Her story, and the story of other women spies, will be told next month. "The war of the women" was a cunning, thrilling war.

The Higher Summons

(*Continued from page 17*)

with some strange sort of fever, did they manifest the slightest interest. No, Martha made no speech. And after a fashion, not having occasion to go into the hills northeast of the town again, her time and attention were centered on Arthur.

He was a tall, reticent chap—Winbolt. His head was half-bald in front. He had slate-colored eyes—calculating eyes—and a trick of smiling down one side of his face. I don't suppose anyone ever heard Art Winbolt laugh heartily. Some people declared he was solemn by nature, made worse by the death of the wife who had borne him three children.

And yet I give him credit: I don't think he'd asked Martha to take her place merely as a nurse for those children. He really loved the Fawcett girl, although it might have started with what she'd done for him. To Arthur, however, love meant possession—monopoly—ownership—or nothing.

THOSE summer months before their marriage he treated Martha with a deference that was good to see. And Martha was heart-starved for that sort of attention. She had cared for others so long! . . with never a thought on their part that she too could hunger for care.

On the whole, Sam and I viewed the affair as a trifle pathetic. And whenever I thought of it so, something stirred in my brain and recalled that noontime when my partner had introduced the patrician chap, Randolph. What had become of him? Had Martha and Art been to dinner with the family? I applied to Flo Lawrence one night in the drug-store.

Willowy, Flo was, long-limbed and blond. Someone had told her that nonchalance was culture, that to be sophisticated one need only be *risqué*. You've met the type. A girl having the natural aptitude to wear clothes like a French fashion plate but fingernails over-manicured—like the claws of a cat. The sardonic lines deepened down the sides of Flo's mouth when I asked about Martha.

"I never spent such an evening in my life. I know Patsy pretty well—that's Art's sister—and so I know Art. But that hospital frump! You ought to have seen her. I suppose she called the frock she wore, sensible. But beside the smart gowns around that table it was Gibson-Girl stuff—"

"Old-fashioned, you mean?"

"No, the style was all right. But when half a dozen women are half naked round a table, it's awkward when one sits in with her clothes on. And the way she fussed over Arthur! . . . She did everything but tuck the napkin under his chin and wash his fingers afterward. Women like that spoil men."

"By the way, how's Merton?"

"Well, he isn't having his napkin tucked under his chin—even if that were being done in the best circles nowadays—Not by me at any rate. I hope I'm too wise. And that's where Martha's at fault."

"Fault!"

"And yet she gets by. Can you imagine Helen Stackpoole falling for her so hard that she actually offers her home for the two of them to be married in?"

"You mean Martha and Arthur may be married in the Randolph place on the Hill?"

"That's exactly what I mean. What *is* it in a woman like this Fawcett person that people seem to fall for?—real quality people—like Mrs. Stackpoole—"

"Florence, if you were told, I doubt if you'd get it."

"Thanks for the dirty dig, Old-timer. Well, see you at church—or at Martha's wedding."

THE twentieth of August, that wedding was to be. And rain, rain, rain—all the week—floods of rain. Hay had mildewed in the fields. Vermont's potato crop was a dank, rotted loss. Not a cold, raw rain either. Warm, misty, clammy, treacherous. In a tropical climate it would surely have meant fever. Still, despite their added duties, the nurses at the hospital found time to give Martha a "shower" that had nothing to do with the wretched downpour—and to tell her, as she made final preparations to leave Putney Memorial for good, that "a miserable beginning would mean a good ending," and

Her hair is dry

She should use Packer's Olive Oil Shampoo

Like all Packer soaps, this shampoo is a vegetable oil soap . . . in addition, it contains a rich, soothing emollient (and nothing to dry the scalp). Dry scalps will never feel a stinging sensation when they use this special shampoo. Leaves your hair soft and silky to the touch—more manageable—and delicately perfumed.

Her hair is oily

She should use Packer's Pine Tar Shampoo

If you have the kind of hair that loses its fluffiness shortly after shampooing, use Packer's Pine Tar Shampoo. This preparation is tonic and mildly *astringent* . . . approved by dermatologists. It leaves the hair fluffy, with a natural sparkle. Use it every four or five days at first; later, every week or ten days may be enough.

He has dandruff

He should use Packer's Tar Soap

the soap that made pine tar famous for shampooing. Pine tar is antiseptic, healing, with properties valuable in the treatment of dandruff. For almost 60 years dermatologists have endorsed Packer's Tar Soap for skin and scalp. For noticeable dandruff use Packer's Tar Soap every few days until improvement begins.

Select the shampoo your hair needs

Acute cases of dryness, oiliness and dandruff need a doctor's care. But nearly all scalps *tend* to be dry or oily, and many are mildly affected with dandruff. Now—each type of scalp can have the special shampoo which meets its particular needs. The coupon is for your convenience. The regular size of each shampoo is for sale at your drug or department store.

Help your digestion *when it's good!*

MILLIONS have found Beeman's Pepsin Gum a pleasant and wholesome precaution against indigestion. Millions prefer the fresh, keen flavor of Beeman's, its smoothness and fine quality, and the pleasant way it stimulates digestive action after meals. Perfected by Dr. Beeman over 30 years ago, this delicious gum is today the favorite of people who chew gum as an aid to digestion. Help your digestion when it's good—enjoy a stick of Beeman's after meals!

BEEMAN'S PEPSIN GUM

aids digestion

And then came more girls from the hospital.

"Martha," cried a nurse named Otter, awesomely, "*it's the black smallpox that's broken out up there!* . . . Doctor Johnson telephoned down from Hastings' store! . . . he's up there alone. . . . Thank Heaven, we girls don't have to respond to that sort of thing. . . . For once in my life I'm glad I'm attached to the hospital."

"The black smallpox!" whispered Martha faintly. Was she sensing a first faint call of duty in those moments—she who had arrived at the apex moment in a normal woman's happiness? Was that what bothered—this thing to come *now?*

"It'll probably clean out the Hollow—black pox! All those cheap, scrawny families with their filthy offspring. Not a nurse in the county will go near them, of course. Besides, what money would that lot of hill-billies have, to pay for nurses?"

"Doctor Johnson, you say, is up there alone?"

"Well, he walked into it, so to speak. Got up there—found out at last what it was—found himself stuck."

MARTHA felt suddenly faint. She asked for a chair and sank down in her wedding dress.

"What the dickens are you getting so white about?" demanded Maud Pitcher. "You're out of it, anyhow. In another hour more you'll be a married woman."

Martha swallowed hard. Her eyes caught sight of a telephone on a near-by table. The scene was being played in Mrs. Stackpoole's chamber. Pauline Otter gave me photographic details later that evening. Martha made a gesture as if to cross to the phone. Then she seemed to come to herself—to remember where she was—what was afoot—

"Martha! What ails you?"

Martha tried to smile. She glanced from face to face.

"I—I—don't know, girls. Only—only—something seems to get me pretty hard—*in here.*" One of her firm, capable hands was pressed against her bosom.

"That's just your training, Marty. You hear of someone sick and it's instinctive to respond."

"But—but—an epidemic—black pox—and old Doctor Johnson up there *alone!*"

"For pity's sakes, what can *you* do about it?"

"I feel as if I'm shirking, somehow—getting married tonight—attempting to be happy—with that sort of thing so close!"

"Oh, applesauce! What are those people to you?"

Her vocation had calloused Maud. Besides, she was there to see a swanky wedding. The effect on Martha was as striking steel to flint. She suddenly found her feet.

"Miss Pitcher," she said calmly, "I don't know what nursing means to you. But when I got my cap, it meant more than pretty lace to pin on my hair. Twelve years I've been at it. Never once have I refused a call that I was physically able to take—"

"You're not being called, honey; you are being *married!*"

"I'm not so sure that I'm not being called. Why should I suddenly feel this way inside?"

"What way?"

But how could she tell them? She crossed to the bureau and stood there gripping it.

"Go down and get Arthur," Maud whispered to Lucy.

"No, I won't. Don't you know it's bad luck for a groom to see the bride before—"

"Well, go get Mrs. Stackpoole. What do you have to bring that epidemic business up now for, anyhow? Mart's just that ninny that she'd stop the whole works if she really got it into her bean that her place was with Johnson up in that pigsty."

Lucy fled to get their hostess. Being flighty by nature, she spilled the whole business through two or three rooms in her search for Mrs. Stackpoole. Winbolt heard at once.

"Of course, she won't get any such fool notion. I won't let her," he announced.

"Huh—I bet if she really got it, you wouldn't stop her!" sauced Lucy.

The situation was given the *coup de grâce* by the little Templeton boy. He rang the front doorbell and gave his message to a servant.

"Mamma says . . . Doctor Dodd, the minister, telephoned her for me to come up here and tell all of you that you good get someone else to marry Mr. Winbolt."

Arthur overheard the shrill, piping voice above the splash of rain on the steps. He pushed through a group, with Maud close behind.

"Yes, sir . . . he was over to Foxboro the first of the afternoon to preach a funeral. He came back through the Hollow and met Doctor Johnson. There's a lot o' people sick up there and I guess he stopped to help 'em. Anyhow, you ain't got no minister unless you grab another."

I heard a frou-frou at my left. Martha, in her wedding dress, was coming down the stairs. A group of white-faced women followed in dismay.

SHE stood very quiet when the facts had been reported. Then she turned and studied Arthur. The hush of tragedy seemed falling on that houseful.

"Arthur," she said, in a voice so hollowed it can scarcely be described, "we've got to postpone getting married, you and I."

"Postpone it! I can get another minister."

"It—isn't—that. Arthur, I'm a nurse. And *a call is a call!*"

"Nonsense, Martha—!"

"See here, Arthur!" Martha's voice was sharp—disturbingly sharp. It stopped his surly grumble. Standing before him, Martha's strong hands stole up to his shoulders. Regardless of fifty to hundred persons looking on, she said, "I care for you enough to marry you, Arthur. I think I've shown that. But you . . . you must be a big enough man to put yourself aside at a time like the present. Or have I misjudged you?"

"It's not a question of bigness. Think of our guests. Think of Mrs. Stackpoole."

"I've already spoken to Mrs. Stackpoole. She understands perfectly. Arthur, an old country doctor is up in the Hollow alone. Even *one* nurse would halve his labors. I've . . . I've got my call as ringing clear as I've ever got a call in my life. And I say again, *a call is a call.* I'm going up there, Arthur, and do what I can for those stricken people. And

only won't try to dissuade me, but ll drive me up there as fast as you make it."

But you're not a nurse any longer. re practically my wife. And you owe me—"

Very well, Arthur. If you won't e me up there I'll find someone who ."

I'll consider it a privilege to get you o the Hollow, Miss Fawcett," said t Randolph quietly over Art Win- s shoulder.

ARTHA came down the front steps in the traveling suit intended for her ling trip. The big canary roadster drawn to the doorstone.

Would you stop at my sister's first, e?" asked Martha. "I'll need my and a couple of uniforms."

e gears clacked. Rain beat on the n-canvas top and the hood. A mist ned the people watching their de- ure from the Randolph veranda.

feel that this is an imposition on Lawrence," the nurse declared, as ar splashed down the drive, "taking away from her."

had a bit of a—a—settlement with " returned the man, "while you were ging from your wedding dress. Of se, she didn't relish my going off up , so close to those infected houses. seemed to think this smallpox thing d reach out and get me on the wing. a bullet, so to speak."

've known it to behave so," was tha's answer. No other word was en until they got down to Pleasant et.

e stayed in the house but a handful of ents. When she came out she was ying a valise. A battered valise, it that had gone with its owner on a sand such errands till the very leather ed as mellow as its mission.

We'd better go out by the East d," suggested Martha. "I hope this as a covered carburetor."

What do you know about covered uretors?" He tried to speak ban- gly—because he was thrilled by the g she was doing and, manlike, sought ver it with jest.

When you've answered as many calls nd these mountains as I have, you'll w the advantages of a covered car- tor in plowing through valley roil."

ut East Main Street the great road- tore, over the tracks by the Process ks, through the covered bridge, ss the rush-bog that stretched be- d the river—then a veer to the left— the awesome fight began.

hose long days of rain had left the a morass. Vast yellow pools in series ahead. And ruts—frightful ruts— chasms in red clay—water-sunk ders—tree boughs—débris—straight em came the catapult of a mammoth g of steel. It struck the water squarely sent it toward the treetops. It rocked, med, swayed, panted, grappled—*and through.* Water and mud was opaque the windshield. The chassis was uled with the drule from that bog. the car was a thoroughbred—like the er at its throttle. It sprawled from maelstrom and got in higher ground.

Bravo!" cried the nurse.

I'll trust Old Betsy to do her stuff,"

The Kelvinator manufacturing plant pictured herewith belongs to the greatest group of plants in the world devoted exclusively to the manufacture of refrigeration.

The *first* name and the *greatest* name in Electric Refrigeration

The difference in Kelvinator is that Kelvinator embodies every worthwhile new feature of performance, *plus* a proven reliability found nowhere else.

From the outset, in 1914, Kelvinator has never lost sight of the ideal of unfailing reliability. Its inventions, improvements and experience have influenced the whole trend of the industry since its beginning.

Test and inspection devoted to every part and process in building Kelvinator are applied to insure dependability before ever a single unit may leave the factory.

Broadly speaking, the pioneering of Kelvinator represents the fullest experience to be found. And because Kelvinator has dedicated its best efforts to lasting reliability, your choice becomes very simple.

You will be better served by the reliable Kelvinator.

In the New 1929 Kelvinator

Silence—Positive and Permanent . . . Completely Automatic Operation . . . Flexible Rubber Trays for Ice Cubes

The new 1929 Kelvinator is the latest word in modern electric refrigeration offering true and lasting silence of operation, wholly automatic service and the reliability which the name Kelvinator has consistently meant for 15 years. New flexible rubber ice trays enable you to extract the ice cubes in a flash, simply by bending the tray. Beautiful new cabinets —any one of them a gem in any kitchen. Do not wait to buy your Kelvinator. Enjoy it now on Kelvinator's attractive ReDisCo monthly budget plan. Be sure to see the new 1929 Kelvinator at the nearest Kelvinator display room.

FOR SORE MUSCLES
GIVES PROMPT RELIEF
Rub in Absorbine Jr.
THE activities of Spring develop many unexpected and unwelcome aching muscles. Keep Absorbine, Jr. handy—rub it in at the first indication of soreness. Relief will come at once. A few applications of Absorbine, Jr. will invigorate the lazy, winter-bound muscles, and round them into mid-season form. Keep a bottle in the locker for tired feet—or a vigorous rub down when you have been out in the rain—it's great for that. Absorbine, Jr. is not greasy. It does not stain the skin. It has many other uses. Read "Timely Suggestions."

W. F. YOUNG, INC., Springfield, Mass.

said Big Mert, "if she gets half a break." Then, sharply: "Hang tight!—here's another!"

The water splashed about them. The car skidded, writhed, grunted, strained—and shot onward. The wiper plied furiously on the windshield as if excitedly enjoying the mad adventure. Around a blind curve, up over a hillock, into some woods where the mud flew behind, out again to the open, up another rise, down again—more puddles.

Swish! Swash! *SWISH-SH-SH!*

Their speed was cut abruptly by resistance of thick waters. A pond stretched about them. Big Mert threw into second, into third. Water boiled over both running boards. The car seemed a boat. Slow but steady—somehow finding bottom—the roadster kept in motion. Finally, like a battle-tank, the front wheels bumped to safety. Up the opposite side of the great pool they mounted. The big tires behind churned roil till the chains caught. A wrack, a jounce—and the juggernaut hurled onward.

Speed again now, a clean mile of it, with rain seeping in or beating in their faces. Both of them were drenched; the dash ran rivulets down the man's pants-legs. Yet the roadster splashed on like the thoroughbred it was. On through the rain. So much of it. Wherever did it come from?

"MR. RANDOLPH, you're doing a splendid thing, lending yourself and your car to—"

"How about yourself, Miss Fawcett?"

"But what I'm doing is my business."

"Business? I wonder!"

Up around the Town Farm, over the tracks into Marshall's quarry, through the woods that fringed Langley's Pond, up the long hill past the Bradley cellar-hole, down the other side, past a black, frowzy orchard—then scrub country—meadows gone to seed—pastureland and swamp—deer-flat and bog.

The great roadster rode ruts, dropped with wracking bumps to the bottom, climbed out, dropped again, skidded. Yet it always stayed upright, always kept in motion. The day grew darker. . . .

"We're getting to it," said Martha finally. "Top that next rise."

Randolph's shoulders were afire. His foot on the accelerator had a bad case of cramp. He pulled up sharply when the woman cried out:

"Wait a minute! Stop here! This is the Fork."

"Fork?" echoed Merton, obeying subconsciously. For the first time since leaving Pleasant Street, the doughty car halted. "Where are you going?" he demanded of Martha. "This can't be the Hollow."

She had opened the door. She started to get out.

"You've carried me as far as necessary. Driving into the Hollow is nothing but nonsense. You'd never get out. You couldn't turn round."

It had stopped raining for a time, though the leafy world still dripped. Martha alighted and reached for her bag. Big Mert followed, sliding stiffly from under his wheel.

The dash clock, mud-streaked, showed a quarter to six. The sun still shone over behind those western cloud banks. Enough

Your *coolest* summer with sunshine every day! *plan it now...*

YES, *Southern California* has ideal summer weather. For your authority—the U. S. Weather Bureau publishes records of *fifty years mean temperatures in Los Angeles*, and they may surprise you; June, 66 degrees; July, 70; August, 71; September, 69. Rain in summer is practically unknown.

And even on the warmer days there is no "stuffiness"—no high humidity—no discomfort here. The secret lies in the prevailing westerly winds that blow across the cool Pacific. You will wear light wraps in the evening and sleep under blankets ten nights out of eleven.

Fine ocean beaches, fresh water bathing at mountain lakes, motoring, sailing, golf, camping, fishing—anything and everything that you like to do.

If you are interested in getting a glimpse of western commerce and business look over the billion dollar oil industry of Los Angeles County or movie picture making in Hollywood. Visit the orange groves and packing houses. Los Angeles County alone produces agricultural products valued at $95,000,000 annually. From Los Angeles harbor ships sail over the southern route to Hawaii and to the Orient.

Enjoy this great trip yourself this coming summer—or *come now* if you wish, for Southern California is a *year 'round* playground, equally attractive any time.

Mail coupon for new illustrated book—a work of art—containing 73 large pictures in gravure showing magnificent scenery, sports, musical and social events.

Special low round-trip rates are in effect from May 15 until October 31. While here see the entire Pacific Coast at small extra expense.

Lovely hair
is healthy hair

Glossy hair, healthy hair—glowing scalp, free from dandruff. Use Sergeant's daily for the hair—and the scalp. Use it freely. Rub it into scalp with finger tips. Prevents dry hair, dry scalp. Helps hair to grow. Keeps it beautiful.

For fifty years, Sergeant's Mange Medicine has proven an effective treatment for dandruff and other hair and scalp complaints. After many years of research, Sergeant's chemists have refined this product so that it retains all the therapeutic qualities of mange medicine, but none of the disadvantages.

Ask your dealer for Sergeant's for the Hair—75c. Use it daily. Comb your hair with it. Rub it in. Keep the handy bottle in a convenient place. Write for free booklet on treatment of hair. Polk Miller Products Corp., 2309 W. Broad Street, Richmond, Va.

Sergeant's for the HAIR

us, not what we are, but what we should be; charting us true across the maelstroms of error.

"Miss Fawcett! Wait a minute! *WAIT!*"

Merton swung beneath his wheel, started his engine, pulled the tired roadster to one side of the highway. Then he kicked off its switch and snapped off its headlights. Over the highway he came. Down that left road.

"You mustn't come any farther, Mr. Randolph."

"But I am going farther. *I'm going with you!*"

"You're—you're what?"

"Don't you understand? We'll make it together—"

"But, Mr. Randolph! *Please!* It's dangerous for you to go down there. It's a form of plague infesting this hamlet. It might cost you your life."

"Do you think that I—a man—could take that road safely home? And all the rest of my life see you starting down this hill alone—in the cold and the rain—sacrificing yourself and calling it your 'business'? What sort of a chap would I be, and not offer to help?"

"But you can't help."

"THE devil I can't help! Didn't I serve twenty-one months in a Red Cross base behind Soissons, after I was gassed, rather than go home and leave it to others to fight the mess out somehow? I guess I know this job. I've done it before. I'm going down with you. We'll fight it out together."

"But, Mr. Randolph. You're different. I'm a—a nobody! I—"

"So? A nobody? I wonder if God and the archangels think that, when they see a trained nurse setting out on her 'business'?"

"But you're the son of—of— What I mean is, your life's more *valuable* than mine—"

"MARTHA!"

A queer, queer place to play a love scene—a man and a woman, mud-splattered, standing ankle-deep in muck.

"Don't you see?—I've loved you ever since that noontime in the newspaper office when first I took your hand. If you really loved the other fellow—if you were really happy in marrying him—it wasn't for me to question or disturb—"

"Arthur—Arthur failed me. You heard what he said? Things between us can never be the same again—"

"And Florence failed me, too. We got all mixed up, somehow, the four of us. It needed this emergency to sort us out—show us who belonged to who—"

"Come on, then," Martha said tersely. But her eyes were shining brightly.

A door opened ahead of them some ten minutes later. Weak light fell outward from a tawdry little house behind a twisted fence. It made an aureole about the iron-gray head of a tired old physician with cuffs rolled back to his elbows.

"Martha!" he cried huskily. "You!"

"Let me wash off this mud and get into my uniform, Doctor Johnson. How many are sick in this settlement?"

"—and Merton Randolph! Good God! Thank His blessed name there's *two* of you. We can lick this thing if it doesn't get worse. All over the county the minister phoned. Not a nurse would respond. He's up at the Renny place now—Dodd—doing what he can for a man with four children. The mother died at noon—"

"Suppose you lie down a little while, Doctor. Get a little sleep and leave things to me."

Martha Fawcett was the cool-eyed, nerveless attendant on human suffering—back at her 'business'—*taking her call.*

THERE were no more deaths in the mountain hollow.

September came—the snappy zest of fall. The rain stopped; autumn sunshine burned the miasma away. Quarantined, isolated, the district was, till late in October. But on a golden day in Indian summer, Martha and Big Mert came up the hill from the Valley of the Shadow.

"It was your fearlessness, dear, in the face of that plague," the man sought to explain, "that first made me realize how wonderful you are."

Martha Fawcett laughed, wearily but happily. Then she was grave.

"Don't give me any credit for that, Merton. I don't deserve—"

"But you ought to take credit."

"No, Merton." She faced him. "On and off between my hospital work—a dozen years—I've gone up and down this county, taking cases, working with doctors. And in all that time, Merton, I've never contracted a single malady—I've never suffered a scratch. And do you know why?"

He waited, thinking what a beautiful picture she made standing in the angle of that old, crooked fence, autumn wind fanning the hair from her face.

"Because," said the woman, "long ago the conviction came to me that no one who goes straight toward his duty is ever harmed, Merton. That conviction has been an armor. I can't help feeling it for those who go reluctantly to meet their obligations who are hurt, my dearest."

"In other words, the old, old proverb, 'Boldness avails even with Heaven'—"

"Not in the sense of audacity, Merton."

"How else?" he said whimsically.

"Call it loving sacrifice—if that doesn't sound maudlin."

"I GIVE it up," Dr. Johnson said hopelessly, in our newspaper office of a week in November. "Dodd called all over Paris County for nurses that night to come out and help. When none'd respond, he got down on his knees—got down and *prayed*. When he rose up he says calmly: 'One will come, Doctor Johnson.' An' six o'clock brought Martha—best nurse in central Vermont!"

It was quiet in our office. I was thinking of the details herein recorded as Big Mert had confided them to me. The physician continued:

"An' do you know what Martha says when I mentioned Dodd's prayin'?"

"What?" asked Uncle Joe, present and listening.

"She tells me 'bout her queer sensation that same hour in Mrs. Stackpoole's bedroom. And then she adds, in that grave way of hers: 'All calls mayn't necessarily come over a phone wire, Doctor.' An' what answer could I make?"

"There ain't no answer," said Uncle Joe awesomely.

Roy Andrews—the Dragon Hunter

(*Continued from page 49*)

counters with wild animals; and almost nstant grips with desert thirst under pitiless sun.

'Of course, it was interesting," he modly admitted to me. "Central Asia is last important unexplored part of the th's surface. It has an area of roughly 00,000 square miles, or about twords the size of the United States. It s the outstanding adventure of my life.

'The heart of this area is the Gobi Des. It is almost completely unknown, is sted with bandits and seamed with h mountains. Between the mountain ges lie wide, sandy plains in which are ther food nor water. The weather is hly undependable, varying abruptly ween bitter cold and scorching heat.

ROM Marco Polo to Sven Hedin, all expeditions had used camels. But I ldn't cover the ground I wanted to if I egoing to move slowly. 'You're a fool!' ple openly told me when I proposed to automobiles for the first time in Central a. 'A car can't last ten days in the des- even if you ever get it there. You will nired in the valleys and wrecked in the ands. Sand will ruin your gears.'

But I thought I might as well take a nce. Exploration is full of chances, way. So I collected seven standard cks and touring cars, got a couple of d mechanics, and started out."

Ie got a few thrills almost before he Peking. For instance, though a war in progress, he had managed to get sports through the area occupied by defenders of the city. Then, unextedly, a general with thirty thousand ps deserted to the enemy. But Anws could not delay without wasting a on. So he again took a chance and le a dash for it. Halfway across the tle-stricken section that lay just westd, he was caught in an air raid and rly lost his life. He kept on and ran a barrage meant to open an attack.

Five of us ran the gantlet of machine s and rifles between the lines," he told "and escaped with our lives only bese the Chinese soldier is the worst shot he world.

After that we had a peaceful time for a hundred miles until we got into bancountry. Here, I was very much afraid t I'd lose my supplies. If I did, there ld be nothing to do but give up and e another year. I had four thousand ons of precious gasoline, one hundred ons of oil, two tons of flour, a ton of ar, thousands of pounds of rice and er food which had to subsist us while were in the lifeless desert.

When we came to the first bandits, we ldn't tell them from soldiers because all wore uniforms.

The bandits were polite, but firm, in r demands that we pay a bounty for g permitted to pass. If we didn't, told me, they'd capture our whole n and drive us back.

As they outnumbered us a hundred to , it was good business to dicker with n. The price was not high. For five

Magic for teeth *and gums*!

CLEANS *and* MASSAGES

THERE'S THE MAGIC of health in the new Pro-phy-lac-tic! Healthy teeth come from firm, active gums; and gums to be active *must* be gently massaged each time you brush your teeth.

Cleans and massages—now every Pro-phy-lac-tic brings you this vital double benefit!

Pro-phy-lac-tic is scientifically shaped to clean every part of every tooth glistening white—front, back, and sides. The bristles are perfectly spaced to slip in and clean *between* the teeth. More—they are live, springy, specially blended to massage the gum tissues to firm, rosy health.

Try a fresh Pro-phy-lac-tic tonight. Brush from the base of the gums to the tips of the teeth. Feel your whole mouth respond with an exhilarating glow of good *health*. Pro-phy-lac-tic Brush Company, Florence, Mass. Pro-phy-lac-tic Brush Co. (Canada), Ltd., Montreal.

ABOVE—*The famous Tufted Pro-phy-lac-tic* . . . LEFT—*The Masso Pro-phy-lac-tic—designed for gums that need special massage* RIGHT—*The Oval Pro-phy-lac-tic—for the smaller-than-average dental arch. All these brushes come with handles in six colors.*

America does business with a pencil. A really good pencil adds efficiency, speeds routine, eases nerves. And saves money by lasting longer! That's why so many offices use Dixon's Ti-con-der-oga.

DIXON
"TI-CON-DER-OGA"
An extraordinary five cent pencil
Made in the U. S. A. by
JOSEPH DIXON CRUCIBLE COMPANY
PENCIL DEPT. 161-J JERSEY CITY, N. J.

dollars the traveler is allowed to take one camel unmolested. For our motor cars I paid a hundred dollars apiece for a hundred miles, or a dollar a mile.

"The trouble was that sometimes we got into territory that was disputed by two or more gangs of bandits. In such cases we had to use our own judgment. For, had we paid both sides and met the increasing figures that each placed on us in jealousy of what the others got, we should soon have been bankrupt.

"I remember one day when our cars were bumping along over a rough camel trail hundreds of miles from the nearest civilized town. Suddenly, out of a narrow ravine rode about fifty men in the uniform of Chinese soldiers. As we had already paid our bandit tax, and since the newcomers outnumbered us five to one, we had to take prompt and decisive measures.

"I quickly passed the word to my men to stand by with rifles. They knew as well as I that if the newcomers were soldiers we should not be molested; but that if they were bandits we might have to shoot for our lives.

"I now had the leading motor head at top speed for the 'soldiers.' With its cut-out open, the big, seven-passenger touring car roared ahead, followed closely by the others. Then the three of us in this car opened fire over the heads of the Chinese.

"The move was effective. With a wild and concerted cry of dismay, the holdup gang, as they must have been, turned and fled into the desert and we never saw them again."

After telling me this anecdote Andrews quickly reverted to his former stand that real adventures were few and far between.

"It was mostly a long grind of motoring through a trailless country; sometimes it was sandy desert, sometimes rocky ravines or saddlebacks. Now and then we would be overtaken by rain and become mired in spots that would delay us for days. We lived on a very simple diet, husbanding our supplies so as not to cut short the period of our stay. From day to day we could not tell whether we should be able to dress in our khaki or in the costume of an arctic explorer, so sudden and violent were the changes in temperature."

"WHAT do you consider the high point of your work to date?" I asked him.

Apparently there wasn't any doubt in Andrews's mind as to what his greatest thrill had been. Instantly his eyes shone and he asked me to let him tell the whole story.

"You know," he said, "that this business of China's putting dragons on her flags is real stuff and not fake. I mean to say that there used to be dragons in China. They started there, and spread to Europe and America before they became extinct."

By dragons, he explained, he meant the huge monsters which lived on the earth in prehistoric ages.

"Once upon a time," he went on, "a real, live dragon lived in the center of what is now China. It had a huge and horrid body, ending in a long, thick, slimy tail which lay on the ground. It had talons on its bent and scaly legs; and in its head were great, round eyes which did not blink. Its face was thin, with a long, hooked beak, and was surrounded by a strange, bony frill that was hard as the top of a turtle.

"It was just the kind of beast you and I used to read about in our fairy books, or that a man dreams about who has eaten two helpings of welsh rarebit half an hour before he goes to bed.

"This dragon I'm telling you about lived happily with some other dragons on the edge of a swampy pond. One day it waited until the other dragons were off hunting and then came sneaking down to the edge of the water, wagging its fantastic head from side to side to be sure that no other animal saw it. Presently, with its hideous, taloned feet, it scooped out a small hole in the soft, wet earth and deposited something in it.

"JUST then a terrible thing happened. There came suddenly from behind the dragon a soft, swishing sound in the tall, prehistoric grass. With a frightful snort of rage and fear, the dragon sprang up, its scaly tail stiffening and its unblinking eyes protruding. For a moment it just stood there, panting in great gasps that moved its clammy sides in and out like the cheeks of a huge bellows. Then, splashing through the shallow water, it scuttled ponderously away.

"Almost instantly from the high grass hurtled a massive body, bigger even than the dragon. It was the dragon's enemy. It didn't have claws as long and sharp as the dragon's, but it had jaws bigger than a crocodile's and a neck as thick as a chimney to drive them.

"There was probably a horrible crunching of teeth and tearing of flesh as the ugly pair rolled into the pond. The water about them became dyed crimson with their lifeblood. But after a while the convulsive struggles of both slowly ceased until, finally, the two mountainous bodies slowly sank beneath the surface and disappeared forever in the quicksand.

"That night, as so often happened in the age of reptiles, it rained heavily. A near-by river overflowed its bank and swept an extra layer of sand, not only over the vanished bodies of the dragon and its enemy, but over the little depression in which the former had hid its treasure. A month later the river again overflowed its banks and added more sand. And several times in the following summer. And again and again for years and centuries and thousands of centuries."

As Andrews sat and quietly told me the story, I could see the picture as if he were painting it on canvas before me. But the thing that gripped me was the knowledge that it was a *true* story.

"And then," he went on in his matter-of-fact tone, "came a wonderful coincidence. At least ten million years later my party and I camped on the very spot where that pond of the dragons had been. Of course, the water had long ago disappeared. Indeed, the bottom of the pond and the bed of the near-by river had been raised by a slow, geological shifting through the ages, until they composed the summit of some high cliffs.

"The next day we all laughed when we began to pick up splinters of what seemed to be a new kind of mineral. We thought it was a good joke on our staff geologist because he couldn't identify our finds.

"We hadn't the slightest idea of the thrill that was in store for us.

"Someone suggested that the new mineral looked a good deal like eggshells.

Corns
new scientific way

Stops pain quick!

Imagine—in one minute you won't feel the slightest corn pain when you apply Dr. Scholl's Zino-pads! You never experienced anything like it before. It's the only *scientific* way to treat corns. *Removes the cause*—friction and pressure of shoes; relieves and heals. No risk of acid burn to the toes as with harsh liquids or plasters, or danger of blood poisoning from cutting your corns.

Dr. Scholl's Zino-pads are thin, dainty, protective, cushioning—guaranteed safe, sure. Doctors recommend them.

Bunions and Callouses

Dr. Scholl's Zino-pads are also made in sizes for Bunions and Callouses. At all drug, shoe and dept. stores —35¢ box.

For free sample (mention size wanted), and booklet, address The Scholl Mfg. Co., Chicago.

Dr Scholl's Zino-pads

Put one on—the pain is gone!

LEARN TO WRITE SHORT STORIES

Jack London said: "As a veteran in the Short Story Game I feel justified in giving my judgment that your simple, direct, straight-from-the-shoulder method of presenting the course is excellently comprehensive and practical." He endorsed **no other.**

With our **unlimited personal criticism** and **manuscript sales service**, you, too, can learn to write the stories of your dreams and experiences. Many earn $5,000 to $10,000 yearly. Over 25,000 publications buying stories today! Write for **free book** "The Art of Story Writing." Also our Special course in English. No obligation!

Drafting Lessons *actually* FREE!

to prove you can get ready for a well-paid Drafting Job—at home, in spare time!

If you want a better job and a bigger pay-check and brighter future prospects, we'll show you how to get them. Drafting is easy to learn, fascinating, and a stepping stone to success in all building and manufacturing lines. Look into this life-time chance—write today for Drafting lessons, free, and guaranteed job and raise offer.

AMERICAN SCHOOL, Dept. D-51, Drexel Ave. and 58th St., Chicago

This idea made us laugh some more. In fact, we began to collect some of the shell fragments to take back with us. Then, to our amazement, we found they actually were pieces of shells, because *we found a whole nest of petrified eggs!*

"We could hardly believe our eyes. We knew that snakes and other members of the reptilian family all laid eggs; and that therefore the prehistoric reptiles must also have laid them. But this was just a scientific theory. Up to this moment no one had ever found the slightest trace of anything to prove it.

"And now we were looking for the first time at the eggs of the gigantic dinosaur, which lived millions of years ago. We were looking at the nest—just a hole in the ground, of course—which that dragon I told you about had scooped out just before it was set upon and killed by its enemy."

What a story it was: The winding, slender thread of circumstances, finer than ever a spider spun, more invisible than thought, and stretching over that vast abyss of ages until the predestined Roy Andrews was drawn thither into the lifeless desert to make the great discovery!

For days the world rang with the news. Museum experts, at first incredulous, became as excited as schoolboys. Offers of $10,000 an egg, $100,000 an egg, even more, were cabled! Scientists began to revise their picture of the early globe.

The wonderful part was that the eggs were only a beginning. In the five succeeding years Roy made one wonderful find after another.

IN NOVEMBER, 1928, he returned to New York with new triumphs: He brought with him the first full skeleton of the Baluchitherium, the world's largest mammal; a case of hunting implements of prehistoric man that are believed to predate by thousands of years anything of the sort ever discovered before. He even had the remains of the biggest and fiercest flesh-eating beast that ever lived. It has justly been named the *Andrewarchus*, after its discoverer.

"I'm sorry to say," he laughed, in describing how he located these treasures, "that our fossil finds indicate that there were mosquitoes ten million years ago already equipped with suckers!"

That doesn't sound like the Garden of Eden, does it?

Probably the most outstanding characteristic about Roy Andrews is his simplicity. He is a good-looking chap; has lots of physical and moral courage; is always cheerful and alert; makes friends easily—and keeps them; loves his pretty wife, Yvette, and his fine boys, George and Roy, Junior. But every single one of these other items, commendable as they are, seem subordinated to one big trait of absolute, direct naturalness in all he thinks and says and does.

May it not be that this is the keynote of his whole character?

Yet Roy says: "In the fifteen years of my work in Asia I can remember just ten times when I had really narrow escapes from death. Two were from drowning in typhoons, one was when our boat was charged by a wounded whale; once my wife and I were nearly eaten by wild dogs; once we were in great danger from fanatical lamas, or priests; two were close calls

WHAT'S FOOD WITHOUT FLAVOR?

it's A MALE TASTE

NOT but what the ladies like it, too. But a man will claim A. 1. Sauce as his own wherever he meets it. Even in France, the birthplace of good cookery . . . in those little sidewalk cafes, where a few francs buy a dinner fit for a king . . . you'll find a bottle of A. 1. Sauce ranged alongside the pepper and salt. They give the male diner his due . . . those French chefs. On this side, of course, every A. 1. home and restaurant has A. 1. Sauce right on the table. Sold by grocers everywhere at not more than 35 cents per bottle, usually less. *Send for the free recipe booklet, "25 WAYS TO A MAN'S HEART." G. F. Heublein & Bro., Dept. 55, Hartford, Conn.*

NOT A SHAVING CREAM

when I fell over cliffs; once I was nearly caught by a huge python; and twice I might have been killed by bandits."

No matter how hair-raising they are, Roy tabulates these thrills in his matter-of-fact way, until you begin to wonder whether you could possibly take them as calmly as he does.

"You can," is the gist of what he says, "if you are in good physical and nervous health, have a sense of humor, and don't take life too seriously."

Perhaps . . . . . .

BERNARD M. BARUCH, noted financier, tells next month "What is in Store for American Business." Looking and guessing ahead is always a fascinating occupation, but it can also be made a profitable one if you know how to read the signs of the times. In his article Mr. Baruch suggests how you may train yourself in the profitable habit of looking ahead so that you may cash in on it.

IN A HILARIOUSLY FUNNY golf story Don Marquis introduces into the magazine next month a super-salesman who almost sold a mirage in the desert while playing golf on a cactus ranch. Golf fans will revel in the oddities of the game, and those who don't understand or care about the ancient and honorable pastime will gurgle over its fun and give a whoop of joy at the outcome.

What Your Handwriting Tells About You

(*Continued from page 25*)

That, too, is a 'muscular action.' Yet it is so individual that we easily recognize a person by his walk.

"Not only that, but his walk reveals a good many traits of his character. It shows whether he is energetic or lazy, timid or confident, boastful or unassuming, decisive or hesitating, and so on.

"These muscular actions, we must remember, are dictated by the brain. If the brain goes on, millions of times, dictating *the same way* of performing the action, can you deny that the action becomes a true expression of mental traits?"

QUESTION NUMBER FIVE: "How can handwriting be a reliable guide to character, since it varies according to our physical condition? When I am tired, or ill, my writing shows it."

"Of course it does!" says Mr. Meyer triumphantly. "Fatigue and illness cause temporary changes in your personality. Normally, you may be optimistic, energetic, and good-tempered. But when you are sick, or dead tired, you become depressed and irritable. You hate to make an effort. Instead of being on your toes, you are in the depths. These are the very things which your writing betrays.

"If you want to find out about your real self, don't study a specimen of writing made when you were sick or over-tired. It is not a good expression of your normal

"It Is Just Like Finding Money"

WHEN I first wrote to you I had gotten into a terrible rut. Life seemed stupid at moments, although my duties as a wife and mother were many, and, of course, interesting.

"Still I had to have some outlet for my energy and so I seized the chance the Pin Money Club offered to make money at home. I started with perhaps some trepidation but my self-confidence quickly grew.

"I was pleasantly surprised, too, to find how quickly I could earn the extra dollars you offered. It was just like finding them My work, which is hardly work at all, can be picked up at odd moments—that's the nicest part of it all. And so I am glad, oh so glad, to be a member of our delightful Club."

Mrs. M. W. L——, a Massachusetts member of the Pin Money Club, one of our newcomers, wrote this letter to me recently.

I hope it tells you that you too can make money here with us? You can—and not just $5 or $10, but $500 and more.

You don't need a cent of capital nor a day's experience. Just a little spare time—that's all that is necessary to make money in the Pin Money Club, a money-making department for readers of The American Magazine. So don't wait any longer—*write me today.*

personality; although an expert would probably be able to detect the fundamental characteristics even then."

Question Number Six: "Sometimes two persons, unlike in character, have similar handwriting. Or two persons, alike in character, write very differently. How do you account for this?"

"In the first place," says Mr. Meyer, "such cases are very rare. In the second place, a thorough analysis of both character and handwriting will show that there is no inconsistency.

"One case which came to my notice was that of two women who seemed quite different in character. Yet to most people their writing appeared almost identical. But neither of these apparent facts was a real fact.

"Fundamentally, the two women were very much alike. Both were sincere, energetic, logical, and modest in their tastes. Both had loyalty and honesty. You will admit that these qualities showed the same basic character.

"Here is the reason why they *seemed* to be different: One was deliberate in her actions and her judgments, while the other was very quick. The result was a great difference in *manner*. People saw this superficial difference. If they had stopped to analyze all that was beneath it, they would have seen the fundamental similarity. And if they had examined the two handwritings, they would have discovered that there were different *combinations of details*.

"That is one thing which always bothers the amateur. He gets the idea that a certain detail infallibly indicates a certain quality; which is almost never true.

"For example, suppose the letters in a person's handwriting vary in size. In a general way, this variation shows a changeable nature. But if you find it in very small handwriting, it indicates versatility, the ability to do many things well.

"The explanation is that very small handwriting shows concentration, force of character, and unusual mental equipment. These qualities dominate; and in a person of that type, mere changeableness becomes the ability to use energy and purpose in a wide range of activities.

"If letters constantly change in size, and in addition the cross for the *t's* is always at the *left* of that letter, these things indicate a person who simply can't make up his mind about anything; a 'wobbly' procrastinator. So you can see how important it is to study the *combinations* of details."

Question Number Seven: "Why don't all musicians write alike? All poets? All plumbers? And so on?"

"People who ask things of that sort," says Mr. Meyer, "show an absolute misconception of the subject. It is true that handwriting indicates mental traits and tastes. But it indicates moral and physical traits also! And in these moral and physical traits a poet and a plumber may be more alike than two poets are.

"To a large extent your *character* has nothing to do with your occupation. A musician may be honest or dishonest, frank or secretive, loyal or disloyal. Whichever he is, it will show in his handwriting. If he is naturally and instinctively a musician, that also will appear. And in the

CAMPBELL'S ELECTRIC RANGE

details which show this natural inclination and fitness, all true musicians do write alike! The expert can easily discover these details.

"Not long ago, a man whom I did not know asked me to analyze his writing. Among other things I told him that he would make a good lawyer.

"'I'm glad you think so,' he said, 'for I happen to *be* a lawyer.'

"I might have said the same thing to another man whose handwriting would seem very different to you. The differences would show that the two men were unlike in certain respects. But the details which indicate fitness for the legal profession would be present in the handwriting of both men. Yet the second man might not be a lawyer! Circumstances, or inclination, might have made him a business man instead. But if it is true, I know he is using in his business career the qualities which make a good lawyer."

QUESTION NUMBER EIGHT "Some people continue, all through life, to write a copy-book hand. How then can their handwriting indicate their character?"

"It does do it!" declares Mr. Meyer. "Because people of that sort may have copy-book characters. It is a curious fact that they are always inordinately proud of their spencerian curves. They haven't enough individuality. If they had, they wouldn't write as they do."

QUESTION NUMBER NINE "It is easy to say that handwriting indicates character; but is there any proof that the theory is correct? How do you know that certain characteristics mean what you say they do?"

"The only way to prove any theory," says Mr. Meyer, "is to test it out. In regard to graphology, this testing has been going on for more than three centuries. Literally countless specimens of handwriting have been studied. Their characteristics have been tabulated. The characteristics of each specimen of handwriting have been 'checked up' with regard to the character of the person who wrote it.

"If you find that a hundred persons who have a certain trait of character in common have also certain details of handwriting in common, it looks as if you had begun to prove something, doesn't it? And if you find that another hundred persons who lack this particular trait of character do *not* have these details of handwriting, the evidence becomes even more convincing.

"This tabulating, comparing, cataloguing, and cross-cataloguing has been applied so long and so extensively that I don't see how the results can be questioned.

"But I want to emphasize one point: Reading handwriting is not fortune telling! You would be surprised to know how many people think it is something of that sort! I am often asked to foretell a person's future from his—or usually her—handwriting. That is manifestly absurd."

QUESTION NUMBER TEN: "What are the most conspicuous signs by which you judge handwriting?"

"In response to that question," says Mr. Meyer, "I have picked out those which even the untrained observer can easily detect.

"Take, for instance, the general appearance. Anyone can see whether handwriting is small or large. However, be sure that a specimen is in the size which the person *usually* writes. Don't take a post card on which he has tried to crowd as much as possible.

"If your natural and habitual handwriting is very small, you may congratulate yourself on one point; for it indicates a mental equipment far above the average. It also shows concentration and attention to details. But don't jump to the conclusion that a larger handwriting necessarily indicates inferior mental equipment! For the larger specimens may have certain important *combinations of details* which, taken together, indicate a fine mentality.

"On the other hand, while small handwriting practically *always* shows a high degree of intelligence, you must look for the details which will show *how* this intelligence is used. A keen and active mind, for example, is sometimes directed by a selfish and grasping nature. In that case, the evidence will appear in the writing. For instance, the final *e* of a word may be hooked; or the words may be compressed into the shortest possible space. If both these signs are present, the writer is inclined to be stingy and 'small.'

"I always study the thickness of the pen-strokes. There are, I repeat, details which affect the significance of any handwriting characteristic; but, in general, fine and delicate lines indicate refinement and simplicity. If the lines are thicker, the writer is inclined toward materialism. Carried still further, this characteristic shows strong will, self-confidence, and love of sensuous pleasures. Muddy writing is one of the worst signs. It has a smeared look, as if it had been smudged in blotting. It indicates lack of stability.

ANOTHER characteristic which I don't like to find is an uneven base line. This may show merely carelessness and lack of dependability. But if you get it with certain other combined details, it suggests various undesirable qualities, including deceitfulness and dishonesty. The persons whose letters keep on a straight line can pretty certainly be depended on.

"By a straight line I do not mean that it must be *horizontal*. It may run uphill or downhill. But the letters themselves should not jump up and down.

"People who habitually write uphill are inclined to be ambitious and optimistic. The reverse is true of those who habitually write downhill. If these angles are only occasional, they simply reflect the writer's mood, not his character. If the line is horizontal, but drops down with the last word or two, it is an almost infallible sign of the blues.

"If the letters are uniformly even in size, it indicates conscientiousness and consistency. If they *constantly* vary, it shows a changeable nature.

"If the small letters, such as *m* and *n*, are pointed, it shows energy, quick thinking, and initiative. The more they are rounded at the top, the greater the inclination to idolence and to lack of initiative and enthusiasm. When the letters are almost square, it shows mechanical ability and inventiveness. The handwriting of Thomas Edison is a beautiful example of this type.

"Another thing I look for is the width of the margins; especially the one at the

AGENTS Every business firm, man or woman, will by Calculator on sight. BIG COMMISSION.

left side of the paper. On the whole, narrow margins indicate thrift. A very broad margin all around, particularly if the lines are widely spaced, shows extravagance. An extremely narrow margin at the left indicates a general lack of artistic sense.

"This, by the way, is a point on which people are curiously sensitive. They don't mind being told that they are selfish, insincere, lazy, irritable, or even dishonest. But tell them that they lack imagination and artistic sense and they resent it hotly.

"Another thing that should be examined is the way a person finishes off the last letter of a word. We call these endings 'finals.' The letter *e* is the best one to study.

"You probably will find that they are not always the same; but you will also find that one length is the *predominating* one. When these 'finals' are practically always absent, it indicates selfishness. If they are short, it shows reticence. If very long and horizontally straight, it indicates decided opinions; but it may also show extreme generosity. There is a great variety in these finals, which makes them very interesting.

"Another significant detail is the way *a* and *o* are made. If they are open at the top, it indicates frankness; although combined with certain other details, it will show a tendency to gossip. If they are not only closed, but tied with a knot, it shows extreme reserve, or secretiveness.

"When these letters are open *at the bottom* it is time to stop, look, and listen! For this suggests hypocrisy.

"THE graphologist is the first person to admit that any one characteristic of handwriting cannot be taken at its apparent 'face value.' It must be studied in relation to all the other characteristics which are present. But I regard the *a's* and *o's*, open at the bottom, as positive evidence in themselves.

"Backhand writing is an example of the importance of a thorough study of each specimen. Some analysts claim that this shows a cold-blooded nature and is characteristic of criminals. Sometimes this is true. But very often it decidedly is not true.

"The normal slope of letters is at a forward angle; but a great many persons, especially young girls, reverse this angle. This detail—and their writing will have other details which confirm this—shows that they are self-conscious, dissatisfied with what they think they are, and afraid of betraying themselves to people who perhaps will be critical and unsympathetic.

"A person who is cold-blooded and heartless may write backhand because it is *natural* to him. But when the persons of the opposite type do this, it is precisely because it is *not* natural. It is an attempt to conceal, or to protect, the true inner self. They are trying to be something they really are not.

"When the letters have an exaggerated forward slope, it indicates an extremely sensitive and emotional nature. These people are ruled by the heart, not at all by the head.

"Of course, there are scores of details which I haven't mentioned. The possible combinations of these details are almost endless; just as the possible combinations of traits of character are almost endless."

✣ ✣ ✣ ✣ ✣

He Tried Home-Study Training

In Seven Years It Multiplied His Yearly Income Seven-fold

Seems too good to be true—that a man can double his income just by devoting a few spare hours each week to home-study training—

"But—maybe it *is* true," said B. J. Mertz—*and within seven years home-study training had increased his yearly income better than 700 per cent!*

Mertz was principal of a rural high-school in Texas, at $80 a month, when the idea came to him to enroll with LaSalle for training in Higher Accountancy.

Upon completing the course, he first took a place as Assistant Bookkeeper, in Chicago—then joined a firm of Certified Public Accountants, chiefly to get experience. Then he became Office Manager and Acting Secretary of a foundry in southern Ohio. *Already—in only four years—his salary had increased 500 per cent.*

Today, he is Comptroller of the Buckeye Union Casualty Company, Jackson, Ohio, and in addition conducts a private accounting practice which brings him back the entire cost of his training every month in the year.

You Have the Same Good Opportunity

Why not resolve just to *double* your salary? Get the training—grasp your opportunities—and the future will take care of itself!

Two books placed B. J. Mertz on the path to greater earning power. They are "Ten Years' Promotion in One"—and "Accountancy, the Profession that Pays." LaSalle will send them to you *free.*

Your biggest opportunity is as near you as the point of your pencil. If you are determined to make progress, clip and mail the coupon NOW!

Find Yourself Through LaSalle!

LaSalle Extension University

The World's Largest Business Training Institution

The Newest and Most Fascinating of All Word Games

Travel Trails

By Arthur Ebenhack and Loren Stout

Take Pleasant Trips Via Travel Trails

(Left) Concord to Boston: *History says we owe much to one Revere and his steed, waiting across the river for the lantern in the tower. The British were to destroy the powder in the arsenal at Concord. This enterprise occurred on April eighteenth.*

(Above) Shreveport to New Orleans: *The order for the lady's dress was sent verbatim to the plantation.*

The home-town Travel Trails begin next month. Readers of The American Magazine have already sent in great numbers of Travel Trails. The contest is still open. Send in your contribution, and thus put your home town on the Travel-Trail map.

How to follow a Travel Trail: Each word must have at least three consecutive letters carried down from the word above. The clue sentence for each trail contains some of the words needed for its solution. See solution of last month's trails on page 166 for illustration of method of working out the trails.

See page 166 for solutions of the April Travel Trails

(Left) Washington to Richmond: *Seek a pleasant little niche in any southern city and your visit will not be boring.*

PRIZES: The American Magazine offers a prize of ten dollars for every "Travel Trail" accepted for publication. Send the solution with your trail. Art work not essential. "Travel Trail," to be eligible for the contest, must not be shorter than seven words nor longer than twenty-five, including the starting point and destination. Also, it must have the home town of the contestant as its starting point or destination. Send your contribution to "Travel Trails" Editor, The American Magazine, 250 Park Avenue, New York City. Manuscripts not accepted for publication will not be returned.

This colorful roof of J-M Blended Normandy Green blends perfectly with the surroundings

Now—Roofs of Colorful Beauty

within the range of any pocketbook!

DOUBTLESS you have often looked at your roof and wished that its drab, worn dinginess could be replaced with the colorful freshness and safe protection which modern roofing materials insure. The roof of today must afford satisfactory protection against time, weather and fire—and, in addition, by its colorful beauty enhance and improve the entire appearance of the house.

This is the age of color! We see its cheery note of welcome wherever we go in the modern home. And nowhere is colorful beauty more important than on your roof! *BUT—"How much will it cost?"* Perhaps you have delayed having your old roof replaced—have hesitated about the choice of a roof for your new home, because you have felt that the tasteful colors and protection which you desired would be too expensive.

A lilt of live color in this roof of J-M Romany Reds

Now, Johns-Manville, makers of the famous J-M Rigid Asbestos Shingles, place roofs of outstanding attractiveness within the range of any pocketbook. You can have exactly the roof you want by choosing from the new *Johns-Manville Asphalt Shingles.*

Color—Protection—Durability

Here are new, modern roof colors and effects. Architecturally correct because architects helped to design them. Color experts directed the choice of tones. Romany Reds, Fieldstone Greens, Tile Reds, rich browns—there is a color, style and shape to fit every home—at low cost. J-M Asphalt Shingles are made from the finest of materials. They are heavily coated with a protective surface of crushed mineral and stone. They are fire-resistant and will protect your home for many years.

J-M—the Hall-mark of Quality

J-M Asphalt Shingles are another outstanding contribution to the American Home by the world's leading authority on Roofing.

J-M Asphalt Shingles are the product of a famous manufacturer—the makers of J-M Rigid Asbestos Shingles which are the last word in roofing quality and beauty. J-M Brake Lining safeguards millions of car owners. Throughout industry J-M Insulation, Packings, and allied lines control heat and power. In theatres, banks and offices J-M acoustical treatment ends disturbing noise.

Our booklet on both J-M Asphalt and Asbestos Shingles is free. Fill out the coupon *now.*

"I Don't Favor No Traipsin' Wimmin . . ."

(*Continued from page 60*)

ny direction—"but bridle your tongues! aim to make inquiremint into this." Vith that, she put her pipe in her apron ocket, clasped her thin hands meekly, lbows resting against bony hips, and valked away. Before I realized it, she vas in the room at my side.

"You're Aunt Arimathea Holbrooks," said, smilingly extending my hand. hen I told her my name and that of my ncestors. I could see in her faded eyes a ght of friendship. "I knowed your kin olks," she said proudly. "I live yander," ndicating a shambling brown house cross the road. "I al'ays board the idge and the rest—court week—an hit id pleasure me if you come too." I greed gladly. Then I had to show her bout the typewriter. She watched in een delight.

At dinner that day, Aunt Arimathea ood behind my chair (a mark of honor) aving the fly brush—which at this sea- on of the year happened to be a lilac ranch—to and fro above the table; now abbing to keep the flies off the corn cob opper of the molasses jug, now shooing em off the platter of chicken.

During the course of the meal, some- ne mentioned the Tackett case. Linda ackett was to be tried for strangling her otherless child. I noticed Aunt Arima- hea had occasion just then to ply the rosecuting attorney and the judge with a cond helping of chicken. "An', hure, y some of these 'zarves," she said, heap- g their plates with blackberry preserves.

I WAS just a-studyin' about Lindie Tackett t'other day," said Aunt Arima- ea with fine unconcern. "Do you mind e time," she included the attorney and e judge with a sweep of her twinkling es, "when Amos Sizemore was tore um to pieces by a catamount?"

All heads nodded assent.

"If it hadn't been for Lindie Tackett 'd 'a' bled plum to death." Aunt Ari- athea started the preserves and hot corn ead on the rounds again. "Yas, Lindie powerful clever. Seein' Amos Sizemore layin' thar bleedin' an' a-moanin' an' beggin' fur somebody to holp him, an' s woman standin' pint-blank like a one, Lindie taken off her own apron an' re hit in strips and wropt Amos's head d arms. Stopped the blood!" She used a brief second. "Mind the time anny Bailey fell off her nag an' broke r leg goin' up Lost Hope to Rheuhamie urton that was expectin'? Lindie was min' along on foot and she hear-ed anin'. She found Granny Bailey and ted her back up on her nag and clim' in front of her, and rid on fast as she ld to Burton's—Granny a-holdin' on ound Lindie's middlin's. Granny'll tell u to this day she'd a laid thar an' died dn't a' been for Lindie. Burton's folks l the little 'un arter Lindie!" Aunt imathea's voice was soft as a kitten's . "Yas, Rheuhamie Burton's never done a-talkin' yit. She says if the rd Hisself had a-come a-ridin' up the ler that mornin', she wouldn't 'a' been y bit gladder'n she was when she riz up on her elbow from her bed a' misery an' seen Lindie Tackett a-ridin' in with Granny Bailey on behint."

I looked up at the judge and the commonwealth's attorney across the table, and I knew from the look on their faces that the words of Aunt Arimathea had not fallen on deaf ears. . . .

I REMEMBER well when "Little Doc" Stamper was being tried for killing Craig Steegall. The state had been a week getting a jury—folks that "had not formed or expressed an opinion" were found to be otherwise disqualified by being related, "blood kin or by marriage," to Little Doc or his victim.

However, the trial finally got under way and things were moving along at a great rate—most peaceably. Little Doc was sitting in the front bench, at my right. Finally, one of Jerusha Hewlett's sons took the stand. I could see the furtive look in his shifty eyes, and I knew by his loose-lipped mouth he would be glad of the "chanst to swar agin' t'other side." One comes to know a bit about human nature from watching the drama of the witness stand.

"You know the defendant here, do you?" asked the attorney. "Yas," drawled the witness. "And you knew Craig Steegall, the man who was killed?" "Yas," came the quick answer, "I wuz the fust one to Craig arter he drapped. I was a-clearin' some brush on my place, and tirectly I hear-ed a couplee shots and I seen Little Doc thar," gleefully pointing at the prisoner, "a-skulkin' off up the creek. When I got to Craig, his gold watch—I'd seed hit a heap a' times—hit was tore off'n the chain. Gone! I ain't a-sayin' who taken hit—" he turned a malicious grin toward Little Doc.

In the twinkling of an eye, Little Doc leaped forward, sending my table, notebooks, and pencils flying helter-skelter. He pounced like a mountain lion upon the witness, and I thought there would be another murder right there.

The sheriff and a couple of deputies finally got Little Doc's fingers pried loose from Hewlett's throat and order was restored.

"Judge," said Little Doc, with hands still clinched at his sides, "I ain't a-denyin' I done the killin'—I had it to do. But this—hit's more'n a feller can lay under—bein' slurred that way."

Then he turned to me with princely courtesy, his head bowed, "Woman," his voice was as gentle as a child's, "I'm plum shamefaced fur a-messin' up your table and your books." He stooped and picked up notebooks and pencils, and put them on my table, and the trial went on. . . .

"I kin stand hit anywhar a year," Little Doc remarked to me quite philosophically after the verdict.

"You won't be obleeged to," said Big Doc, the father. "We'll get you sprung in six months if you'll jest quile down."

The son made no reply, for the sheriff came up and took him away. The father lingered a moment beside my table. "Nary bit a' harm in the world in Little Doc 'cept when a body riles him," he said, and, squirting a stream of tobacco juice from his shaggy mouth, Big Doc stalked out.

I had been looking forward to the trial of Abijah Croswite with eager curiosity. For I was to glimpse for the first time at close range that most elusive individual—the "moonshiner." I use the word unwillingly. It is a word, by the way, that I have never heard fall from the lips of a mountaineer.

When I took my place at the table inside the rail near the witness box, there wasn't a vacant bench in the whole courtroom. In the front bench sat the prisoner's wife—the clerk told me who she was—Drusilda Croswite, with a baby in her arms and eight more little Croswites in calico and bare feet, huddled about her.

Opening formalities ended; the first witness was called.

In a few minutes the sheriff came in, leading a little old man. He was slightly stooped and his step faltered. His kindly gray eyes searched the room a moment—after he was sworn and seated. At last he spied Drusilda Croswite and the children, and I could see him take courage.

"They call you Old Bije, I believe," said the commonwealth's attorney. "You are an uncle of the prisoner—Young Bije Croswite—you make your home with him and his family here?" indicating the bench where Drusilda sat.

"Yas," answered the witness.

"You were present, I believe, on the occasion when John Daly, a revenue officer, and Andy Lewis, his deputy, were shot to death in the cabin in which you reside in this county. You were there—were you not?—You saw the murder!" barked the attorney.

"I wur thar—but no—I warn't what you might say a eyewitness to the troubles," drawled Old Bije. He let fly a stream of tobacco juice straight into the sawdust box that stood halfway between the witness stand and the jury.

"Tell what you know," bellowed the judge.

THE little old fellow blinked his faded eyes, and rubbed a gnarled hand over his sparsely bearded chin. "The last I seed—the last I taken notice, Young Bije was a-sottin' like *thar* alongside the foirplace, and like *hure* was a-sottin' the travelers. The' claimed they wuz travelers lost their way," he added contemptuously. "Well, they wuz a-sottin' like I'm sayin', and all of 'em was a-makin' talk. Peaceable-like they wuz—smokin' maybe—and takin' a leetle dram now and then—not to 'mount to nothin' tho," he added quickly. "Mought all 'a' had a leetle dram or two—Young Bije and the travelers—I hain't a-sayin' they did—I hain't a-sayin' they didn't—I says they mought 'a' had." He crossed one leg over the other and thought a moment. "They wuz a-sottin' thar—" he started again, but the judge's gavel came down with a crash.

"The jury has heard that—go on—tell what you know."

"Tirectly," the little old man began

Every child *must be given the chance to grow strong . .*

YOUR CHILD can have sturdy, straight legs, good white teeth, rosy cheeks and sparkling eyes. But only the right kind of food can give them to him.

At Battle Creek, food specialists have spent years studying child feeding. As a result they have made nourishment more easily and appetizingly available. Food-lime for strong bones and good teeth, food-iron for red blood and Vitamin B for vigorous growth are offered in the most delicious cereals, food drinks, and wafers.

Especially popular is Fig Bran. Children and adults as well, love its flavor of parched bran and luscious California figs. This tempting cereal is so high in food value that it helps to make up the deficiencies of the modern diet. In a healthful, natural manner it aids in regulating body functions, and makes it easier to keep fit. Pale children and invalids need the nourishment of Fig Bran. It is ready to serve anytime.

Fig Bran is a delicious breakfast food rich in the three great food elements every growing child must have. Featured this month at all Health Food Centers.

At the famous Battle Creek Sanitarium and similar institutions all over the world, Fig Bran is served daily. Together with the other foods in the Battle Creek line, Fig Bran is sold by your local Health Food Center—usually the leading grocer.

SAVITA—Yeast extract rivaling finest meat flavor. PROTOSE—Vegetable meat rich as choicest beef. MALTED NUTS—Delicious food drink teeming with health. FIG BRAN—A dainty cereal of bran and luscious figs. "ZO"—Toothsome vitamin cereal everyone enjoys. VITA WHEAT—Appetizing all-wheat 6 minute porridge. BRAN BISCUIT—Crisp, tasty, wholesome bran crackers. LAXA—Crunchy biscuits of bran and agar. LACTO-DEXTRIN—Refreshing anti-toxic colon food. PSYLLA—Seeds that sweep through intestine. PARAMELS—Creamy caramels of mineral oil.

BATTLE CREEK SANITARIUM HEALTH FOODS *for Everybody*

Free Diet Service

At Battle Creek we maintain a staff of graduate dietitians to advise you on any diet problem. If you will write to Ida Jean Kain, our chief dietitian, she will send you suggestions for your particular diet. "Healthful Living," a most interesting and helpful book, written by a leading nutrition expert, will be sent free if you write your name and address on the margin of this ad and send it to us. It describes with recipes many of the foods used in the Battle Creek Diet System. THE BATTLE CREEK FOOD CO., Dept. 15, Battle Creek, Mich.

LAW *Free Book*

Write today for FREE 64-page book, "THE LAW-TRAINED MAN", which shows how to learn law in spare time through the Blackstone home-study course prepared by 80 prominent legal authorities, including law school deans, and U. S. Supreme Court justices. Combination text and case method of instruction used. All material necessary furnished with course, including elaborate 25-volume law library, delivered immediately upon enrollment. Many successful attorneys among our graduates. LL.B. degree conferred. Moderate tuition, low monthly terms. Money-Back Agreement. Write for free book today.

once more, "tirectly I 'lowed hit wuz a-gettin' late—an'—I pulled off my boots and turned in!"

A ripple of laughter swept over the court-room and I wanted to join in. *I* could appreciate Old Bije's spirit of preparedness—remembering a time not so long before when I "turned in"—clothes and all.

The judge was in no mood for fun. "Silence in the court-room!" he thundered, and the commonwealth's attorney turned to the witness.

"What happened next?"

"Arter I turned in to take me a nap a' sleep?"

"Yes—go on from there—then what happened?"

Old Bije shifted his position and rubbed a hand along the seam of his worn breeches. "Arter that—tirectly—I hear-ed ka bing! ka bang! agin' my headboard!" He thumped a fist in his cupped hand—"Ka bing! Ka bang! Bullets was a-hittin' my headboard. I jest pulled my kivvers kinda up round my head and dozed off to take me a nap a' sleep."

The attorney jumped to his feet. "Do you mean to tell this jury that with bullets flying about that room you—you—"

"Let the witness go on and tell in his own way what followed," said the judge.

"Next mornin'—fore sunup—I reckon hit was, I reached out my hand from under the kivvers to git my boots an'—my hand teched the travelers' feet. I kinda riz up on my elbow an' peered out from under my kivvers. I seed them two fellers—the travelers I mean—a-layin' thar in their gore." He squirted a stream of tobacco juice with uncanny accuracy into the sawdust box. "I never seen Young Bije nowhar," he added with unconcern.

"You didn't see the hand that fired the shots but you *did* see those two officers—each with a bullet through the heart—lying there in a pool of blood? That's right, isn't it? You *saw* that?" raged the attorney.

"I warn't to say a eyewitness—" Old Bije began again, drawing a twist of homemade tobacco from his hip pocket.

"That'll do—stand aside!" ordered the attorney. "Mr. Sheriff, we'll take Young Bije now."

The old man picked his hat up from the floor where he had tossed it and was led away. As he passed my table, I wanted to reach out and lay a friendly hand upon his stooped shoulder.

THERE was a stir as the door at the rear of the room opened. It was the door, we all knew, that led to the jail-house. The sheriff entered. At his side strode a stalwart mountaineer, scarcely thirty, with head erect and hands bound together. At a brusque command from the judge, he halted before the bench. And with clasped hands held high to heaven, he swore to tell the truth—the whole truth—and nothing but the truth. "So holp me God," he murmured reverently.

His kindly eyes sought Drusilda's and the meek Drusilda looked bravely at her man. She put an arm about the little tot at her side and the child snuggled closer. The other little Croswites sat with hands clasped in their laps—wide-eyed and fearful.

"We will show you, gentlemen of the jury, that this man is a disgrace to the

Digitized by Google Original from UNIVERSITY OF IOWA

ɔmmunity," the attorney was booming rth. "An evader of the law . . . unɔrthy of the benefits the Commonwealth vishes upon him . . . unworthy to de upon its splendid highways . . . and ı its railroads . . . railroads . . . that is man's taxes should rightly support . . and not content with one crime . . . adds another, and still another. Disling poison that destroys his fellow men. ıd when the arm of the law would reach t to seize and stop him . . . what en, gentlemen of the jury? He kills!" From his mighty seat, the judge beamed wn with pride upon his able colleague, ıo now sat with folded arms—shoulders own back, bristling with self-imporıce. "That ought to get a conviction," puppet assistant whispered in the ear his master.

All the while, Young Bije Croswite sat plexed and confused, looking from the lge to the jury, from jury to prosecutor. was dazed by the man's fine big speech ɔy his education.

Finally, he turned desperately to the ge. "Dare a body speak a word?" he ed timidly.

The judge exchanged glances with the ɔrney. "The Court will permit—" looked condescendingly upon the prisr—"the Court will hear if the defendhas anything to say in his own behalf."

The sheriff nudged Young Bije and lded to him to go on and speak.

"I ain't no larnin'," he began in faltervoice, "but peers to me like this man's ke kinda unthoughtedly." He shook head in confusion. "Why, I hain't er seed a *railroad train*, so how could I ɔon hit?" He looked about in bewilderıt.

Young Bije thought a moment . . . ng hard to find the right words. "Hit's land, hain't it? I heir-ed hit from ɔpy, same as him from his'n. My ndsir claired hit hisself and . . . ıted him some bread . . . they warn't ax to pay!" The prisoner scanned the s about him for a nod of assent. "Then cain't a body, if he sees fitten, make some puore corn whisky outen part is crap, 'thout payin' tax? What's the n a-blockadin'?" he asked earnestly.

THE judge looked bored, the attorney yawned . . . might as well let Young have his say . . . they were confident conviction . . . anyway, he'd hang self if they only gave him rope.

"Why, 'tain't pizen!" the prisoner ded, eager to convince them. "Why, Ero yander"—he indicated the y in Drusilda's arms—"he'd 'a' died vorm spasm if my woman hadn't n him a leetle grain. An' thar's Jamie" e little fellow snuggled closer to his her's arm—"thar's Jamie time the er bit him. He'd 'a' died 'fore we d fotch a doctor . . . hit's a blessin' God that my woman had a leetle n on the place."

The judge and the attorney exchanged s—and leered with contempt at the less prisoner.

Suddenly Young Bije jumped to his "'Tain't fair, I tell you," he cried ously. His hands were gripped toer—the veins stood up like cords. on't aim to deny killin' them—*them lers*—they called theirselves. Travele tuck in an' fed the best we knowed,"

Life crowds you closely

he panted helplessly. "I had a right—an' 'tain't fair for the Government to send—"

The frenzied sentence was never finished. The judge shouted, "Contempt of Court!" and the marshal and his men rushed in and seized the prisoner.

"God Almighty—fellers," Young Bije gasped—half dazed—they were swiftly adjusting the handcuffs so that he was fast to a deputy on either side. "God Almighty, fellers," the proud head sank to his chest, "ye cain't take a man from his woman an' his little uns?" The voice fell to a whisper as they dragged him from the room.

Drusilda Croswite, pale, tense-lipped, dry-eyed, stared straight ahead. I saw her arms grow rigid about the baby. The child whimpered in pain. Little Jamie snuggled closer. He looked up knowingly into his mother's face, then tried to hide his head under her arm. The eldest of the children—a slip of a girl no more than ten she was—got up from her place on the end of the bench. She shook her mother's shoulder as you would awaken a sleeper. "Come along, Mammy," I heard the child say, "they've penitentiaried Pappy." And I saw Drusilda Croswite flinch—as if a sharp blade had been thrust into her side. Then everything went black before my eyes for a moment. That was as near as I ever came to breaking down in a court-room.

NEWS travels swiftly by word of mouth—up dark hollows and along the creeks. Only the week before, a railroad prospector had gone out to Lost Hope to sound out folks as to a right of way. I had accompanied him—part way—to make statements. Since that time, about every man in the district, so it seemed to me, has been looking for the judge to find out what he thought of the proposed road.

I was sitting at the typewriter in the little one-room building that served him as an office. Looking up from my work, I saw a stalwart fellow coming across the road. Behind him, meekly followed a young girl, as is the way of mountain women. She was garbed in a dark calico dress and a dilapidated slat bonnet. On her arm she carried a round hickory basket. Their dog trotted along with them.

"I'm a-wantin' to see the judge," the man said, standing hesitantly in the door. I knew what he wanted—it was about the right-of-way. The girl—her rare beauty of face startled me—hung her head timidly. She did not lift her eyes.

I invited them to come in and wait . . . the judge would be along directly. "Your wife can sit here beside me," I said to the man, indicating the one other chair in the place.

"She hain't my woman," he replied, looking at me suspiciously, "she's my sister—Jason Mosley wuz our pappy—we come from Lost Hope." The girl glanced up shyly at him. His look said "All right!" and she sat down, putting the huge basket at her feet. Her hands were meekly folded in her lap.

I tried every way to engage her in conversation. . . asking something about their farm . . . was the road being worked up in the hollow? . . . was there a meeting-house at Lost Hope? . . . did they *favor* a railroad coming through their district?

Digitized by Google Original from UNIVERSITY OF IOWA

Suddenly the brother raised his hand imperiously. "Nary word, Emmie, she'll sot hit down agin' ye . . . she's a short writer. You hear-ed Tabor's folks name hit tother day," he admonished fearfully.

The truth dawned upon me. I recalled taking Jethro Tabor's deposition in a right-of-way case for the railroad company and of reading back to the old man part of his testimony. It made Jethro cautious almost to the point of silence. I remembered that.

"That's a fine dog you have there," I said to the youth, hoping to hit upon a common interest.

"Hit is for truth," he said proudly. "Strong-minded too, 'taint afear-ed of nothin'. Treed a catamount onct."

I patted the dog, praised his fine head, his eyes, and his fine, shaggy coat. I saw that the young fellow was pleased.

"Emmie," he said, "I see the judge rost yander. I'll go *thar* and talk a leetle spell an' you can sot hure twell I git back. Jest ye want to go down to Kegley's an' wait?"

"No, I'm through my tradin', Jason." She spoke gently and looked at the basket with its bluing, sugar, soda, and baking powder. "I'm through—all I *kin* trade," she added, her eyes on the unsold sassafrass and eggs in the bottom of the basket.

AFTER Jason had gone, I went about my work with fine unconcern—until I felt, without looking around, that he had crossed the road. Then I turned to Emmie, sitting quietly in her place.

"I suppose you folks are putting up a lot of blackberries this season," I began.

"Right smart," she answered. She did not look up.

I was not making much headway. Maybe if I talked about something else . . . but what? I was groping for some common ground between us. "Can you knit, Emmie?" I asked.

"Yas," she answered shyly, her eyes still fixed on her folded hands. "Yas, a sock a day, if I'm a mind to."

"Why, that *is* remarkable!" I exclaimed. "Why, Emmie, you ought to go for that, knitting things to sell . . . maybe come to town to the mission school . . . show other girls what you can do—" I was going on enthusiastically. I looked at Emmie. She was sitting dejectedly—perfectly quiet.

"I kain't," she said despairingly. "Didn't you know I wuz destroyed?" Her fingers twitched convulsively—"She'd be three year old this spring—if—she'd lived."

"A girl, only a slip of a girl," I thought, and fair as the lily of the field. She was never meant to be '*destroyed*.'" My heart tied out. I wanted to put my arms about her . . . to say something to comfort her. Instead I sat . . . hands clasped helplessly in my lap even as Emmie. . . .

And so, Jason, standing on the threshold, found us.

"Emmie," his voice was tender, protecting, "we'll be goin' now, back to Lost Hope!" . . .

I watched them as far as I could see them, trudging along the road. Jason leading the way, Emmie, with her hickory basket on her arm, following meekly behind, not lifting her eyes . . . slowly, wearily . . . back to Lost Hope!

My Biggest Problem

FIRST PRIZE

How Can a Lonely Woman Meet Unmarried Men?

NEVER have I seen, in THE AMERICAN MAGAZINE or elsewhere, any hint as to how other women meet the problem of acquiring men friends. There is much advice to the woman as to how to treat a man after he has become interested in her; but never a word as to the means of arousing his primary interest. The only thing ever told women in my predicament is, "Don't seem too eager." I certainly cannot seem too eager, because I have never been sufficiently acquainted with an unmarried man for him to know whether I was eager or not!

The difficulty seems to be that none of my good qualities are apparent at a distance. I have nice skin, hair, and eyes, but there are so many fairly good-looking women that I am always lost in the crowd. I am a reasonably good cook, but as I have to earn my living by intellectual pursuits, no one ever suspects it. I try to be a "good sport," but a man can't tell that by his first glance at me.

If I had had men friends who later wished to discontinue the friendship, I'd feel differently; think myself unfit in some way. But, as it is, I can't help feeling that I might be able to win their liking if only, at first meeting, I could make myself seem an interesting individual, instead of just another woman. Has any woman any suggestions to offer? U. T. F.

SECOND PRIZE

Suicide, Exile, or Prison—Which One Should I Choose?

MY BIGGEST problem was one of life or death—of cowardice or self-respect. I was a banker—wealthy, honored, respected. Illegally I used funds of the bank in private operations of my own and lost them. The bank examiner discovered the shortage. That night as I drove towards my beautiful country home some miles from the city, three distinct lines of procedure seemed open to me. Should I flee and become a hunted man on the face of the earth? Should I go the cowardly and easy route—take my own life? Or should I stay and face the music? A few miles before I reached my home I turned off the highway into a country road, got out of my car, and walked down that road. I asked the Father above to help me decide rightly, and to give me strength to see my decision through, no matter what the cost.

Fortunately, I did decide rightly, though I realized that it meant dishonor, disgrace, and prison. The only manly thing to do was to make what restitution I could, and take my medicine. I did. I pleaded guilty and accepted a sentence of ten years. Never once has there been a question in my mind but that I settled my biggest problem rightly. I am now looking forward to the day when prison gates will open and I can stage my comeback. H. J. H.

THIRD PRIZE

I Nearly Failed My Husband in His Greatest Need

FOUR years ago the world was a friendly place to me and mine. I was spending a month in Florida, going from place to place. At the end of the month, when I had chosen the location I liked best, my husband was to bring the children to me.

He never came. A telegram arrived, bidding me to return north at once. When I got there I learned that every dollar we possessed, and thousands we did not possess, we owed to another. My husband was not to blame, unless a too generous and trusting nature can be blamed. But I treated my good husband with contempt. I demanded that he get money for me to go to my parents in California.

And then one night I found him with his head in his hands, his shoulders shaking. "I wish Mother were alive," he sobbed. "I could go to her. She wouldn't think me a failure."

It seemed to me that my heart would never beat again; how could I have deserted him, even in thought, when he needed me most? How dared I treat him so cruelly that he longed for someone else to tell his troubles to? It is just nobody's business the tender love and pledges the two of us exchanged there in that room.

After hours of anguish I determined that my first step was to get rid of my misery. But how? The answer came: Assume the attitude of having no misery. Keep busy.

I went forth and secured a job teaching school. Today the money we lost is forgotten, but the love that is ours is a new love, and one that will weather any ordeal that may come, for it was born of *understanding*. E. H.

A thrifty Scot first used sand. It was free and plenty. But today Scots use Reddy Tees to avoid extravagant scores. The Reddy Tee was invented by a lover of the game. He didn't like the wet, sticky sand and the way it cut his hands when he gripped the club. Thus he contributed to your pleasure and comfort—to your game—the now famous Reddy Tee.

Let's Go Down the Road to Meet the Spring!

(*Continued from page 26*)

death of winter. Thus to impregnate the human heart with a faith and a hope in immortality was the Creator's master stroke.

There is a close relation between the arrival of spring and the laughing renewal of all our earthly hopes. It is not only nature which reawakens; our own dreams revive, our aspirations. Sun and bird-song and wild flower reach us with penetrant peace. Not alone do the flowers blossom, lifting to the sky their fragile faces of delicate beauty; but our own hearts wake from their long winter's sleep, look up, and worship.

Even the humblest heart rejoices and is inclined to utter things poetic. I recall what an old gardener said to me one day when I stopped to talk with him while he was spading a garden. Serene and amiably melting was the sunlight. In the mild air were rainy sweet fragrances. The freshly upturned soil had the deep, rich odor of damp loam—a fruitful odor full of promises of abundance. All about in the yards of the quiet village the pear trees were standing tall and snowing. The peach trees were a song and a silence of pink and white. The coming green was misting the elms and the maples. What innocence, what modest loveliness, was in the solitary narcissus growing by the garden fence! I said something in greeting to Old John. Both of us remarked on the beauty of the day.

"You know," he said, as he leaned on his spade, "the whole world seems sweet sixteen!"

Always have I treasured those words from that modest source. And it is true that spring arrives less like an infant than like a débutante. Almost as soon as she truly appears, she looks like a girl dressed for her first communion.

IN THE general scheme of things there are compensating forces at work everywhere; and this great fact is nowhere more manifest than in the joy that the coming of spring affords to the inhabitants of various zones of the earth. Excepting the Eskimos, from consideration upon whose emotional processes I am unable to report, it seems true that the farther north one lives, the sharper the demarcation of the season becomes, and, as a result, the more poignant the happiness when the frozen reign of winter is over. In the far South, winter is seldom more than a mellow, pronounced autumn. In middle latitudes, winter is real; in the true North, it is a serious business, to be prepared for like the meeting of an inveterate and hardy enemy.

Born and reared in the South and familiar with her "golden suns and silver rains," I well remember, after my first winter in college in the North, how eagerly I awaited the spring, how much more the season meant because of the character of what had passed.

Every season is unique; and there is about spring a flower-charm that no other season possesses; a sense of virginity, of

Profit, in addition to Interest —on Investments chosen primarily for Safety!

MANY of our customers have obtained a substantial profit, in addition to interest, through exercise of Stock Purchase Warrants or Conversion Rights which accompanied the Bonds or Preferred Stocks of certain issues originated by this institution.

For example, one of our recent issues was quickly absorbed by our customers—*primarily because the Bonds provided a high degree of safety, with ample security, and with earnings nearly three times interest requirements.* But in addition, each Bond carried Stock Purchase Warrants entitling the holder to buy common stock at attractive fixed prices. A rise in the price of the latter enabled the Bond holders to exercise the Warrants and obtain a worthwhile profit.

That illustrates the advantage of a contact with this institution whereby you regularly receive descriptive literature on our offerings, which frequently include issues such as described above. The coupon will bring you literature describing attractive current offerings.

tremulous ecstasy divinely ordered. Then the floating clouds picture our own soaring hope; then the day is graced by innocent beauty, winsome as the prayers of a child; then the night is jasmine-bosomed, mystical with fragrant rhythms; then every sense and every heart is joy. The world seems suddenly free of envies and malices: they perished in winter's majestic disrepair. Then the strong, cold beauty of the North, that so long has stood stately and immobile against her grand background of steely snow and bleak, gigantic trees, begins to relent. Diana is about to capitulate. A lover from the far South has touched her heart.

"THE darkest day," said the old philosopher, "if we but live till tomorrow, will have passed away." It is so with the darkest week, or season. Winter brings the world into shadowy and majestic and cosmic disrepair. The days scowl bleakly by. The nights slump gloomily past. Yet, at the appointed hour, the far, all-animating paternal Voice sounds over the world. The clarion summons is obeyed. Life stirs in the dark soil. In the dim air, high above the mountains' misty throne, there are triumphing wings, as the wild geese go northward. And to us the Voice means eternal recurrence of joy. Singing to us that no human trouble is final, no winter lasting, no darkness permanent, spring is the living and laughing denial of the omega of death.

Once more, amid music and beauteous lights, it runs up the curtain that we had thought fatefully down forever. Indeed, the scheme of things in our world is such that no tragedy is wholly convincing. Human nature is too resilient, and God is Love. The soul feels clairvoyantly her immortality. Spring always returns. And there is something superlatively reassuring to the human spirit in the certainty of the spring's approach. It is almightily so ordered.

And when it comes, it always comes "trailing clouds of glory." About an April twilight there is a special magic that makes us feel that we are privileged to be invited into one of God's glimmering gardens. At such a time the human heart is likely to be ingenuous to an engaging degree. I have long believed the soul to be somewhat nocturnal in its habits; or at least, as daylight wanes, the spirit begins to feel and to manifest certain occult powers. And when a silvern April moon transfigures the world, the soul becomes communicative and childlike. Safe in the arms of God, it talks like a child, its voice one of angel-notes.

WELL I remember, as an illustration of the truth of this, what an old negro said to me one April twilight. The thought, I believe, had haunted him for years. It took a spring evening to make him utter it. Knowing Gabriel as I do, I had not supposed him capable of a fear so poignant. I will tell you what he asked me.

I had ridden down to the plantation gate, and Gabriel had walked along—just out of comradeship. Calm was the sunset, blooming like a gradual rose of the dim universe. Dusky fragrances came from the twilight pines; the scent of the wild yellow jasmine was in the air. An amethyst light suffused the lonely forest. Both Gabe and I felt the mystery and the beauty of it all. Later, I would return to the Great House, and he would go across the dark ricefield-bank to his cabin. As we reached the gate and the deepening shadows cast by the imminent forest, I drew rein; and at that moment, clearly through the spring evening, from far away across the plantation fields, came the voices of negroes singing. Their melody blended with the radiant twilight choral that the pines were softly chanting:

I will meet you,
Yes, I'll meet you;
Oh, I'll meet you in de Promise' Lan'.

And the music, and wakened memories, and the tender darkness of the holy evening, loosed the tongue of Gabe, so that he asked me a question that must have haunted him many a year. How shall I ever forget the appeal of its utter humility?

"Cap'n," he said softly, "I know for sartain that the time is coming when you will see all those who have gone befo'. You will see little Blue Eyes what died, an' Ole Miss, an' all yo' people. But how 'bout me? How 'bout Gabe? I is jus' a po' nigger. You t'ink de good Lord will let me see them once mo'? Can I get to de Promise' Lan'?"

I could only reach down and take my black man's hand.

"You will see them again," I told him, speaking what I believe to be true; "we'll all be together once more in God's good time."

Gabriel, my dusky friend, with a heart pondering mystery, left me under the stars of that April evening. The air was very still; and from the shadowy road under the pines, as he receded from me, I heard him saying softly—

"Yes, my Lord: in de Promise' Lan'!"

Thus did the humble Gabriel eloquently voice for me the human heart's eternal homesickness for that Other Country, where those who loved us await us.

I REMEMBER a spring dawn on a farm. Night had warmly hung over the earth like a dark-blue flower; like a spirit-presence, laying velvet fingers on the dreaming world. Long before daylight I was awake, looking in childlike wonder at the superbly blazing morning star, effulgent just above the misty oaks beyond the sleeping meadow. An air odorous as Eden softly moved the curtains by my window. Now the east was brightening with a cool, gray premonition of dawn. Far, peaceful cries were heard from awakening farms.

Now the farm creatures began to stir. The cattle heaved themselves humpily from their couches by the haystack. The turkeys, now off the roost, began their faint fussings. Bespangled with fragrant dew, the pea vines and strawberry plants in the garden began to take shape out of the lifting mantillas of mist. Almost as native to the farm as the cattle and the fowls, as the dawn unfolded flowerlike, a bobwhite, mounted on a fence-post in the far pasture, began his ringing wild whistling.

Flaring over the ridge of hills now came the sun. Day on the farm had commenced. And if that, with all its beauty, peace, fragrance, chance for honest toil, palpable proof everywhere of the Creator's love for us—if that does not make life seem worth while, what ever can? In the great words of the Psalmist, a spring dawn on a farm

has the power, by divine alchemy, to "renew a right spirit within me."

The worker of the soil, the toiler in the fields, he who feels and sees the springtime fulfilling infallibly the hopes which his heart had cherished throughout the long winter—he has no difficulty in apprehending God. *Not* to believe would be a task too stupendous for his understanding. The gardener is always humble. He walks with wonder, and toils amid poetic miracles.

Well he knows that there's magic in the garden in the spring, and in every field and wood. Out of the rayless darkness of the soil rise sunsets and dawns of bloom. Something there is that whispers to the lonely little seed, "Awake and live." Out of the dust the fairy wild flowers make their artful artless gowns. Out of the dust the oaks and the hickories, the walnuts and the beeches, receive their massive crowns. Here, indeed, is Resurrection. Until wakened by God, all the Beauty we know slept in dust.

SHOULD not the springtime afford us deep spiritual joy by suggesting to us that only Almighty Love could have designed such a season; and that its purpose and love's purpose in the human heart are one: to lift life to warmth and light out of an ancient cold and darkness?

Spring has always come to me early—perhaps because I have usually gone down the road to meet it. It has come to me early in March on the wings of a warm, wild, rainy wind, full of the smell of sap, the odor of living bark and swelling buds, the fragrant promise of blossoms.

For many years one of my regular spring comrades has been the author of that justly famous poem, beginning—

> When tulips bloom in Union Square,
> And timid breaths of vernal air
> Go wandering down the dusty town
> Like children lost in Vanity Fair.

As surely as the little pools of spring rain glitter in the grassy meadows; as surely as the shy ferns uncurl their trustful, delicate fronds; as surely as the eaves of the apple trees are hung with fringes of delicate blossoms, Henry van Dyke comes to his old haunt in Pennsylvania, Dickey's Run, to fish for brook trout; and I have learned to associate his coming with the return of spring. Among my happiest memories of this vernal season are recollections of him.

Though, after a fashion, I am a fisherman myself, when this Old Master comes, I cannot profane art by casting a fly when he is doing the same thing. Alert to notice the things of nature along the springtime stream, and swift to speak of them with precise felicity, he described, I recall, the wild columbine's flowers as "red chalices"; the field sparrow's singing at dusk as a "song of the spirit;" and the shadowy, gleaming waters of a great hemlock-shaded pool as "a huge amethyst." His keen awareness of the wild life about him, even while he is masterfully casting a fly under a tangle of elders, may be judged from the fact that the only rose-breasted grosbeak that I ever saw along this trout stream he pointed out to me, in an old sycamore.

A poet first and always, this comrade of mine is ever a searcher after ultimate truth. Often, as I walk the bank while he

Nonspi. AN ANTISEPTIC LIQUID

Keeps Your Armpits Dry and Odorless

THERE is no excuse in allowing armpit perspiration to discolor and ruin your clothing, and its disagreeable odor to humiliate and embarrass you.

More than a million men and women keep their armpits dry and odorless and protect their clothing with NONSPI (an antiseptic liquid) used, endorsed, and recommended by physicians and nurses.

NONSPI destroys the odor and diverts the underarm perspiration to parts of the body where there is better evaporation—and need be used on an average of but two nights each week.

You, too, can have dry and odorless armpits and save your clothing. Get a bottle of NONSPI today. Use it tonight. Use NONSPI the year around—spring, summer, fall, and winter.

Your Toilet Goods Dealer and Druggist has NONSPI at 50c (several months' supply) or if you prefer

wades the stream, he says little profound things to me that prove that his fertile and comprehensive mind is not preoccupied by fishing. For example, I recall his saying, with that spontaneity which sometimes comes readily to us while we are children once more on nature's heart: "All the real trouble in the world comes from someone's lack of self-control." And this: "A man should be guided by his admirations, not by his disgusts." And this: "There is always a prophetic certainty which belongs to moral intuition."

Because of my fellowship with this true philosopher, when the slow tide of color brims the earth, when the joy of spring deluges the world with resistless might, I have been constrained to be thoughtful about it all; and to accept it less as an unreflecting pagan. Truly it is God's work, this "bridal of the earth and sky."

I HAVE another cherished comradeship with an old friend who is a cabinet-maker. He, too, loves trout-fishing; and on afternoons in mid-May I meet him by the trout stream.

One day I found him by the stream fishing in the rain. As he is much older than I am, and as the weather did not seem inviting to me, I was concerned for him, and told him so.

Standing by an old weeping willow, his coat collar turned up, his battered old hat pulled down all around, he let his line drift lazily down the dimpled stream. He smiled at my fear.

"What's a little spring rain?" he asked jovially. Then he added, "Nature never hurt me yet."

The essential, elemental truth of that saying keeps coming back to me. Nature does mother us.

It is generally supposed that spring makes us gregarious, turning our fancies to thoughts of love, and all that. But the soul often delights to wander alone in the spring, through all the new beauty and the new song, seeking out some old haunt of ecstasy, or strolling at will down fragrant lanes fringed by bursting sprays. Spring gently and insistently reminds us that life is to be lived, and not altogether to be toiled away.

Once more it comes to us, this divine miracle of spring. We delight in its outward manifestations, and our hearts feel its profound spiritual import. At nature's nuptial shrine we renew our faith in the Eternal; and into our hearts these convictions must infallibly and irrevocably take root and sturdily grow: That Truth and Beauty are the language of God; Virtue is the behavior of God; Love is the will of God!

WHAT is poise? Who has it? How can it be acquired? Of course, you'd like to know. Who wouldn't? Everybody admires the man or woman who is controlled and poised under all circumstances and conditions. Dr. Harry Allen Overstreet, noted scholar, author, and lecturer, says that this remarkable quality is not inborn, but is acquired. And the how of its acquisition is fully explained in "The Kind of Poise that Gives You Power," an interview that will appear next month.

Jane Loses Her Umbrella

(*Continued from page 63*)

ighed. "A black one, too. If you really nust carry umbrellas, why not choose a launting red one or a proud purple one or a lyric green one?"

Jane gave him a coldly pitying look. The man, of course, was a fool.

"If you had had a good black umbrella you wouldn't have ruined your clothes and our rug," she remarked crisply. "And now, is there anything I can do for you?"

"Ah, yes, business. Of course, business," he remembered.

"I came to your hospitable office"—he glanced briefly at the damp headlines of the paper on which he stood—"to see Mr. Paul Wetherby in regard to a contract."

"Mr. Wetherby will not be in the office today. He is out of the city. But I am Mr. Wetherby's secretary, and possibly I can be of some assistance?"

Jane's voice was again smoothly impersonal, marvelously secretarial.

The man looked at her shrewdly, albeit twinkle still sparkled on the surface of the shrewdness.

"I'm sure you can tell me just what I want to know." He paused a second, then added, "Quite as well, or, possibly, even better than Mr. Wetherby."

Jane lowered her eyes noncommittally, but she flushed a little, pleasurably.

"I am Robert Knowles, of the Knowles Radio Corporation," the visitor introduced himself. "We haven't been altogether satisfied with our publicity, and I thought I'd shop about a bit. We are informed that your Mr. Paul Wetherby has the day-after-tomorrow approach. Some of our people seem to feel that that's what we need. I expect our stuff has been pretty stodgy."

JANE, by strength of her Puritan ancestors, suppressed a gasp. Robert Knowles, of the great Knowles Corporation! She thought dizzily of the double-page spreads which that company flung about in magazines that counted circulation by the million.

If Wetherby, Kane, and Wetherby could land the Knowles account, it would be the biggest plum they'd pulled in many a day. Her knees felt a bit wobbly. Paul Wetherby's telephonic condescension flickered across her memory.

"Only routine matters, and *you* can handle *them*," he had said. Huh!

Aloud, she remarked with creditable calmness:

"I'm sure we could submit acceptable ideas; and we should be very glad indeed to handle your account."

Then a small imp of French irony popped into her head, reminding her of a day not so long ago when Tom Segal, struggling young copy writer on the Wetherby staff, had sat on her desk smoking a smelly pipe and airing his views of the Knowles advertisements.

"They are all wrong, Miss Brown," he had assured her earnestly. "Now, here's the sort of line they ought to follow!"

She remembered the stuff he had outlined, and she knew, she *knew* that it had been good. Tom Segal could map out a publicity campaign for the Knowles

Do Your Friends Feel Sorry for Your Wife?

Like it or not, your friends and neighbors size you up by what you EARN—judged by your home and family. Why not surprise them by making good in a big way? Tell them nothing, but on the quiet fit yourself for a bigger place!

ONLY a woman knows how much a wife can suffer when her husband fails to "make the grade"—

When she dreads to meet her old school friends—when she skimps on her own appearance "so John can make a good showing at the office"—when she can't give her children things as good as the other children have, *and they ask her why.*

Brave, loyal woman, she would be the last to reproach her husband because he doesn't earn as much as other men whose wives she is thrown with constantly.

"Money isn't everything," she tells him—yet how she longs for his promotion—for that bigger salary that means better clothes, greater advantages for the children, a new car, *more of the comforts and luxuries of life!*

What can you, as an ambitious husband, do to help?

No need to ask your wife to put up a brave front—she's already doing that. No use to ask for a "raise" on the ground that you "need more money"—"raises" aren't secured that way. No big gain in devoting longer hours to your work—chances are you are already giving loyal and conscientious service.

Only one thing, then, for you to do—so important that it may prove the very turning point in your career: *you can and should compel those opportunities that quickly lead to bigger income, real success!*

But let's get down to cases—so that you may see exactly what we mean—

Assistant Superintendent Made Production Manager

Out on the Pacific coast lived a factory man, 30 years of age — assistant superintendent of a growing plant. He enrolled for home-study training in Modern Foremanship and shortly after got together an informal class of factory executives, for discussion and study. His general manager stepped him up to production manager with a salary-increase of 125 per cent.

Becomes Sales Manager

In a middle western city lived a salesman, 50 years of age. For 35 years he had sold—and sold successfully. Indeed, on nearly every sales force he had been at or near the top of the list in point of sales—*but he had never been able to sell himself as a sales manager or executive.* He was earning between five and six thousand dollars a year.

Within 18 months after his enrollment in Modern Salesmanship, he stepped into the position of president and general sales manager—at a salary of $15,000 a year.

Salary Increased 500%

A railroad clerk in New Jersey decided—like Jack London before him—that the only way out of a pit was *up!*

Training in Traffic Management led to a better job—then further training in Business Management helped him make good as sales manager—with a resultant salary 500 per cent larger than when he started training. Now he operates his own successful manufacturing concern.

These Cases Not Exceptional

And so we could go on, with case after case—yes, thousands of them—and every man could tell of a salary-increase better than 100 per cent which he directly credits to LaSalle training—

Are you, then, so different from these thousands of other men? *Have you less ambition? Do you lack the will power or the stamina to "see it through"?*

Send for Free Book

Below there's a coupon—just such a coupon as thousands of men used in their successful start toward greater earning power.

This coupon, filled in, clipped and mailed, will bring you an interesting booklet descriptive of LaSalle training in the field of your choice, together with a copy of that most inspiring book, "Ten Years' Promotion in One."

people that would be a winner. But, of course, Tom Segal would never get any credit for it. Paul Wetherby would have all the credit. Unless— That small French imp jogged her hand. And the Puritan ancestor who should have been there to restrain her must have been asleep at the switch. Oh, well, even Puritans must sleep sometimes.

Jane pushed a button firmly, and to the preoccupied office boy who answered the summons she said:

"Get Mr. Segal from upstairs, Freddy."

As they waited for Tom Segal, a vast embarrassment descended on Jane. This was Robert Knowles parked on a newspaper at the edge of her rug! *She* had given him this ignominious position. And, oh, good heavens, what had she said to him! She could feel the blood surging up her throat, pounding in her temples.

"Oh, please, won't you sit down?" she said in a very, very small voice.

Robert Knowles quirked one shaggy eyebrow, and his eyes were a little cynical.

"Why the change of heart, sister?" he asked. "I'm just as wet now that I'm Robert Knowles as I was when I was nobody."

Jane's blush grew even more painful. The man was accusing her of the smallness of snobbery, and the uncompromising truth that was in her knew that the accusation was just.

BUT something queer was happening to Jane. It had started to happen when Paul Wetherby telephoned to her in condescending vein. It had been happening with increased velocity since this breezy visitor had brought the storm and all outdoors into her neat office. So now, instead of hanging her head in merited shame, she cocked it aggressively and answered back.

"You are not nearly so wet now as you were," she said. "In fact, you're pretty well dried. And I'd like, if you will please step off the newspaper, to bundle it into the wastebasket, so my office can look tidier. We may have other visitors," she added with an air.

Robert Knowles laughed, his big, booming laugh that filled the small room.

"I didn't know they made 'em housewifely any more," he commented. "That word 'tidy' now, you must have found that in a terribly old dictionary. Where did they grow you?"

Jane was saved a reply to this fresh impudence by the puzzled entrance of Tom Segal, whose puzzlement changed to genuine stage fright when he found himself called upon to outline a campaign of publicity to a member of the big Knowles corporation.

It was Jane, after all, who had to calm him and remind him and encourage him, until finally he forgot himself in his enthusiasm for the thing he was creating, and his tongue was loosened as it had been that day not so long ago when he sat on her desk and told her how the Knowles advertisements ought to read.

He now told Robert Knowles himself how they ought to read. Robert Knowles was interested, too; Jane could plainly see that. He argued and suggested and vetoed, but he praised also. After an hour of this, Knowles indicated that the session was over, and Tom Segal trickled out with his penciled notes and sketches, a sort of dazed hope in his eyes. He had—as Jane happened to know—a sick young wife and a sickly child. If he could make good on something big like this, it might mean a promotion which would lift some of the awful weight of doctors' bills that were stooping his young shoulders.

"That young man's ideas are promising," Robert Knowles commented. "And now, what about lunch together, you and I, discussing details—prices and such-like proper things?"

Jane instinctively drew back, because Jane's reaction to all of life was negative.

"Oh, I'm afraid I can't do that," she murmured.

The man smiled down upon her with humorous understanding.

"What's the matter—lifting your umbrella of caution again?" he asked lazily. "It's bad luck to raise an umbrella in the house, sister. Now, just what is the trouble? Don't you know that Mr. Wetherby would lunch with me and talk over the details if he were here? Is it that you suspect me of being a gay dog? I assure you I'm fearfully safe. Steady old bachelor of thirty-five and very good to my mother."

His taunting drawl prodded that small French imp in Jane.

"Yes, I'm sure you are," she said cattily. But even as she said it, she was jamming her hat down over her head, slipping on her rainy-day coat, reaching for her umbrella.

"Please don't take that," the man begged. "Show that you trust me, by leaving it!"

Their progress through the long outer office where the typists worked left a wave of silent wonder in its trail. Miss Brown without her spectacles (for Jane had taken them off to polish and had quite forgotten to put them back), going out into a rainy day with no umbrella and no rubber shoes—and with a *man*! Wonder on top of wonder! As the door closed behind them, the wave of silence broke in a froth of slang.

"Well, for swimming the ocean!" remarked Miss Coralie Klein. Coralie was a recent acquisition of the office, and was already known as "Peaches."

JANE'S recollection of that luncheon was always a blurred sensation of warmth and regret. Heart-comforting warmth that came from having a person show some interest in her, in Jane Brown, as a human being—the first person who had shown any such interest during the whole three years she had been in the city. Regret that nagged her memory in the days that followed because she had allowed herself to talk too much about herself.

Now, why, *why* should she have confided to Robert Knowles that she liked Edna St. Vincent Millay's poems and that she hated squash? Why should she have described for him the large Cheshire-cat person who sat at her left at the boarding-house table and oozed optimism, even when the meat was tough? Why should she have revealed her homesickness for the smell of spruce forests, for the sight of white-painted houses, and the joy of tall, blue larkspur set against sturdy hollyhocks in a garden?

All of her reserved nature shuddered at the memory of that conversation. As for what they had to eat, she could never

remember that. And as for the "prices and such-like proper things" which they were to have discussed—well, they simply didn't.

On the next day, however, Jane was her own efficient self as she placed her neatly typed memorandum on Mr. Wetherby's desk, and added in her quiet voice the oral postscript:

"Mr. Robert Knowles was in yesterday to discuss plans and estimates for a series of advertisements. Mr. Segal talked with him about a plan which interested him very much."

Paul Wetherby dropped the memorandum which he had picked up and allowed his efficient mouth to fall open in uncontrolled amazement. It was fully half an hour before Jane was able to make him believe that the thing had happened, as it had happened, in his absence. Then he said coldly:

"You should not have called Segal into this. He isn't the man to handle it. I wish you had waited until my return, without attempting to start anything. However," he shrugged his nicely tailored shoulders, "I can probably pull the chestnuts out."

Whereupon, he began to push bells briskly, to fling snappy orders at underlings who answered the signals. Finally he disappeared into the double office of the senior members of the firm. Just what he said to the senior partners and just what he said in the outer offices, Jane could not know, of course. But presently she heard echoes. Persons stopping at her desk on one errand or another would ask:

"Did you hear about the big Knowles contract Mr. Wetherby has just landed?"

The quirks at the corners of Jane's mouth straightened ominously. Mr. Wetherby indeed!

Then Coralie Klein undulated in to lay a typed report on Jane's desk, and paused to remark:

"It must be awfully thrilling to work for Mr. Wetherby."

"Very," Jane answered dryly.

SOMEHOW she found it less and less thrilling to work for Mr. Wetherby after that rainy April day—less and less thrilling to work at all. She felt as if a strong breeze had blown through her life, and had upset the neat card catalog where she filed her thoughts, so that now all sorts of ideas were whirling about in her mind, mixed up with strange emotions which had blown in from somewhere.

Paul Wetherby was conscious of the change in her. To look at her, she was the same plain, bespectacled, competent secretary. But the eyes behind the spectacles were somehow different. He felt them regarding him in moments when he was making a big impression, and something in their expression made him oddly uncomfortable. He felt particularly so the day he told her that he had taken Tom Segal off the Knowles copy and had given it to Temple Mercer, a brisk, go-getting young man who drove to work in a sporty roadster.

Jane protested.

"But Mr. Knowles liked Segal's plans. The thing was understood between them," she said.

Paul Wetherby decided to put her definitely back into her place.

Lovely "VENETIAN" Mirror and Invisible Cabinet

THINK of it—a beautiful "Venetian" dressing mirror and roomy medicine cabinet all in one! Because the cabinet is concealed, the bathroom becomes more luxurious, distinctive, artistic. Dainty etchings and attractive metal rosettes are included to complete a handsome decorative scheme.

New kind of Shorthand

HERE, at last, is the answer to the vital need for an up-to-date, scientific system of shorthand—so simple, so easy, so natural that anyone can learn its fundamentals in one evening. Amazing speed quickly developed.

No need to master a foreign language of signs, symbols, dots and dashes. This new system employs the ordinary letters of the alphabet.

Speedwriting
The NATURAL SHORTHAND

—the only scientific system written with pencil or on typewriter. Adopted by leading business concerns. Originated by Miss E. B. Dearborn, eminent authority on shorthand, who has taught almost all systems for eighteen years in such institutions as Columbia University, Rochester Business Institute, Simmons College and the University of California.

A Speedwriter, Grace O. Moorehouse, states, "After completing only three lessons I took several letters and the work was perfect. I am now employed as a private secretary's understudy at a considerable increase in salary."

DANDRUFF

A Sure Way to End It

There is one sure way that never fails to remove dandruff completely, and that is to dissolve it. Then you destroy it entirely. To do this, just apply a little Liquid Arvon at night before retiring; use enough to moisten the scalp and rub it in gently with the finger tips.

By morning, most, if not all, of your dandruff will be gone, and two or three more applications will completely dissolve and entirely destroy every single sign and trace of it, no matter how much dandruff you may have.

You will find, too, that all itching of the scalp will stop instantly and your hair will be lustrous, glossy, silky and soft, and look and feel a hundred times better.

You can get Liquid Arvon at any drug store, and a four ounce bottle is all you will need.

This simple remedy has never been known to fail.

MONEY FOR YOU AT HOME

Campbell's Electric Exerciser

Made in 2 Models —Floor Model and Portable Model

Are You Troubled with Overweight?

Would you like to keep in good physical condition without heavy exercise? Here is the practical solution to your problem. Without physical exertion you can still keep legs and arms supple—keep the entire body system toned up in glorious health. The Campbell Electric Exerciser

Massages—Vibrates—Keeps Weight Down

Floor model, mounted on rubber feet—stands securely without permanently attaching to floor. Portable model, easily and simply attached to window sill or may be placed on any table top and securely held in place. Both models are quiet, safe and have all moving parts enclosed.

POPULAR PRICE. Write and let us quote you our SPECIAL OFFER which brings you either model at surprisingly low cost.

THE WILLIAM CAMPBELL COMPANY
413 Union Avenue Alliance, Ohio

"It's not a question of plans, Miss Brown, but of talent. Segal is nothing but a plodder; he hasn't the ability to carry the thing through. Temple Mercer has. As I told you, it was most unwise in my absence to attempt to handle a contract of this size."

Jane was silent, which was the most untactful thing she could have been. There are few things as irritating as certain brands of silence.

She happened to go down in the same elevator with Tom Segal at the close of work that day, and it enraged her to see the dull hopelessness which was snuffing out his youth.

"It's a shame!" she said to him as they stepped out of the elevator. "It's a shame you aren't to have the Knowles publicity. Had you started to work on it yet?"

Tom Segal laughed mirthlessly.

"I'd about finished," he told her. "I've been sitting up nights with it. It was the biggest chance I'd had, you see; and I wanted to make good."

"Did Mr. Wetherby see your copy and drawings?" she asked.

Tom shrugged his shiny serge shoulders.

"No. He wasn't interested."

Jane's eyes behind the spectacles smoldered.

"I wish you'd bring them to me tomorrow," she said. "I don't know . . . something might happen. . . ."

SOMETHING did happen a week or so later when Temple Mercer's plans were finally completed and were taken to the Knowles office by Paul Wetherby himself in fine go-gettive mood. What happened was that Robert Knowles turned the plans down flat, and definitely refused to give the Knowles account to Wetherby, Kane, and Wetherby.

And when Paul explained the matter most plausibly to his senior partners, the whole office was blue with the echoes of the elder Wetherby's comments and testy old Mr. Kane's remarks. But Jane, when she heard the bad news, once again said nothing, which was again the worst thing she could have said.

Jane's first intimation that her employer was dissatisfied came to her somewhat indirectly. She was typing busily one morning when Coralie ("Peaches") Klein, tightly swathed in a single breadth of black satin, passed through the room and into the private office of Paul Wetherby. She was over the threshold before Jane saw her. But what did it matter? He would be glad enough to talk to her. Any man would be glad, Jane thought bitterly. That's what they all liked—cheap little imitation film actresses.

Presently she had to consult the files, and as the file case was close to the door which communicated with the inner office, a door which Peaches had failed to close tightly, Jane became unintentionally an eavesdropper. She heard the honeyed voice of Peaches:

"Oh, if I could ever get to be *your* secretary, Mr. Wetherby, it would be wonderful. *You* are so wonderful!"

Jane almost laughed aloud, would have laughed, but for Paul Wetherby's words, which came with stunning distinctness:

"Well, just between us, I have been thinking of making a change," he was saying. "Miss Brown is a good worker, efficient in her way, and faithful. But she—"

Jane never heard the end of the paragraph. For, you see, when a person has had nothing in her life but work for three solid years, and when she has put her whole soul into her job, it is rather earthquaky to feel the job trembling underfoot.

Jane went about her duties for the remaining hours of the day in a sort of frozen daze. She sat through her tasteless boarding-house dinner that evening in a daze. But alone in her room at night, the dams of repression so carefully set up by her Puritan ancestors gave way before the surge of Gallic need for expression, and Jane Brown, for the first time in her sad, colorless young life, wept into her pillow.

The alarm clock which roused her the next morning waked a new Jane. Her fellow-boarders, if they had bothered to notice her at all, could have seen the difference in the abandoned way she sugared her cereal at breakfast.

She went, as usual, to the office, but only tarried long enough to get some papers from her desk and to leave a brief, unapologetic note for Mr. Wetherby: "Shopping. Back later in the day."

Shortly after eleven o'clock, at the very moment when Paul Wetherby was fuming over the perverseness of women in general and of women secretaries in particular, three blocks across town a bewildered office boy was announcing to Robert Knowles that a young lady was waiting to see him; that she wouldn't give any name, but just said, "Tell Mr. Knowles it's the girl who always carries an umbrella."

Robert Knowles repeated, "Girl who always carries an umbrella." Then suddenly he remembered, and chuckled.

"Show her in," he said.

The office boy threw open the door and Robert made a queer, gurgling noise in his throat.

THE girl who stood in his doorway was April, a-tiptoe. The corners of her wide, childish eyes, the corners of her sweet mouth, the curling ends of her impertinent hair-cut, the short brim of her smart felt hat, the flare of her brief little sports frock—everything about her quirked up happily. Jane had spent the morning shopping with a vengeance!

As she moved to the chair which Robert offered her, she suddenly darted aside and stooped to pick up a pin from the floor.

"See a pin and pick it up, all the day you'll have good luck," she said.

"So you *do* believe in superstitions?"

"Maybe. I'll see if this one works."

"But you're so different today." He wrinkled his puzzled brow. "Do you know, I feel almost as if I'd invented you!"

Jane considered this.

"Perhaps you have," she decided. "That makes you responsible."

"I'm willing to take the responsibility!"

"I've brought something to show you," she said, suddenly serious. And proceeded to untie a big folder which she carried with her.

"Strictly business still," Robert remarked sadly.

But the very first drawing that she showed him caught his interest. Thereafter, for half an hour she urged her case. It was a good case.

"But why didn't Wetherby show me

these drawings before? That junk he brought here was nothing like this."

Jane decided to put her cards on the table.

"These are Mr. Segal's drawings and copy," she explained, "the young man you talked with the day you came into our place. Mr. Wetherby took the job away from him and gave it to someone he thinks a better man. But I happened to see what Mr. Segal had already finished and I felt sure you'd like it."

Robert Knowles picked up a pencil and laced it through his fingers meditatively.

"You are . . . interested in this Segal fellow?" he asked.

"Oh, tremendously!" Jane answered. Robert dropped the pencil and it rolled across the floor.

"He has had such a hard struggle," she continued. "A sick wife and a delicate child, and no money except his salary."

Robert beamed happily at the dark picture she drew.

"Poor fellow," he said heartily. "Well, suppose we call it a go, then," he decided.

"You'll give us the account, really?" Jane asked, her eyes lifted happily to his.

"On these drawings," he agreed, "and this copy."

"So picking up the pin did bring me good luck," she laughed, as she bundled her papers into the folder.

ROBERT KNOWLES held her hand a trifle overtime for a parting handshake.

"Look at that calendar on the wall," he commanded. "See what tomorrow is—Friday, the thirteenth. I can't face it alone. What about giving me the evening?"

Jane considered. Then one of her French grandmothers whispered to her the right answer.

"Perhaps," she said doubtfully. "You might call me up and see!"

Returning to her own office and swinging nonchalantly into the room, humming a gay tune, Jane almost stumbled over Paul Wetherby, who was fumbling helplessly in her neat files.

"Well!" he said. "What's the big idea of the morning off?"

Jane countered with a ripple of laughter, turned her back to her employer, and fluffed her hair at the mirror—oh, quite as Peaches Klein might have done.

"Don't you think it was worth a morning off?" she asked pertly.

Paul gasped. Involuntarily he settled his cravat and smoothed his patent-leather hair.

"I'll say it was," he told her, and grinned. Then he remembered, and glowered. "I've had the dickens of a morning. Couldn't find anything in these darned files."

Jane showed no signs of penitence.

"While I was out," she remarked casually, "I saw Mr. Knowles, and I've persuaded him to give us the account, after all."

Paul stared.

"*You* persuaded him!" he echoed.

"Um-h'm. But on condition," she added. "He will give it to us if he can have these drawings and copy." Again she untied her folder.

Her employer studied the drawings.

"Who did these?" he asked.

Jane looked him straight in the eye:

"There's the *new* Ned Tyson"

"He's making big money now"

"I used to know him when I was a kid—we went to grammar school together.

"Then his father died and he had to go to work. Got a job with Brooks & Watson as a clerk, but couldn't seem to get ahead.

"Then overnight something seemed to wake him up. He began making suggestions to the firm—helped them to save a great deal of money.

"Then Old Man Brooks became interested—wanted to know how Ned happened to know so much about the business. Ned told him he'd been studying at home at nights through the International Correspondence Schools. 'H'm,' said Mr. Brooks, 'I'll remember that.'

"He did too. Put Ned out on the road as a salesman for a year or so and then brought him into the main office as sales manager.

"He's getting $6500 a year now and everybody calls him 'the new Ned Tyson.' I've never seen such a change in a man in my life. The I. C. S. deserves a lot of credit."

An International Correspondence Schools course will help *you* just as it helped Ned Tyson. It will help you to have the happy home—the bigger salary—the comforts you'd like to have. Start today to make good. At least find out what this great school can do for you.

What Price Income!

"How Much Should I Lay Aside for Life Insurance?"

A question more frequently asked the life underwriter than any other. What proportion of his income can a young man put into life insurance premiums, especially if he is married?

CONCRETE FACTS SPEAK LOUDER THAN WORDS. Here is the actual program of a young man, 28, married, with two children.

His income is $5,000 a year. What would you consider a fair proportion of this income to lay aside for life insurance? Ten percent?

Actually in this case the annual premiums amount to about $600, leaving a balance of $4,400 of the income for the support of the family, an easy proposition for ambitious young parents looking to the future.

What do THEY get for THEIR $600?

Total life insurance of $30,000,—$5,000 to be paid in cash in case of the husband's death, the rest so arranged in a trust settlement as to produce $100 a month income for the wife during her lifetime, the remaining principal to go to the children after her death.

Do you not think this young man has done well for himself and his family?

Surely he has laid out his life very successfully, with a fair income for present living expenses and an estate of $30,000 to leave for his family.

In the meantime cash value accumulates and dividend returns are paid.

He might struggle for years to obtain such a result in other ways, and then fail of his goal, in the meantime missing the best there is in life including the contented enjoyment of his income and his family.

How near can YOU get to this? Let us help you work it out.

"Tom Segal did them, Mr. Wetherby." He flushed angrily.

"I told you—" he began. But Jane interrupted. Jane had definitely stopped being a perfect secretary, you see, for perfect secretaries never interrupt.

"It's these or nothing," she said. Then she added gently, "I thought perhaps you might like to tell the senior members of the firm that the contract went through, after all."

Paul Wetherby swallowed what he had been about to say.

"Er, yes. . . . Perhaps so," he said, and retreated into his own office. But Jane noticed that he carried young Segal's plans with him.

She smiled. Funny little boy, she thought, playing at the popular game of go-getting. They were all funny little boys, men. And that was all right, because life itself was a funny game. A nice game. Where anything might happen.

She looked at her desk calendar. Friday, the thirteenth. Tomorrow. How glorious to have plenty of tomorrows coming!

For Jane, you perceive, no longer looked at life through rimmed spectacles. Nor did she any longer raise against Fate the black umbrella of caution.

HAVE you ever been irritated by a raucous voice? Soothed by a soft, gracious voice? A voice can be made attractive or repellent by the way in which it is used. And, unfortunately, the majority of our voices are misused. We just don't know how to develop them properly. Next month, through the medium of an interview with Mr. Otho G. Van Campen, who has developed and improved the speaking voices of over 7,000 men, we tell you how you can make your voice a social and business asset.

"Newcaritis"—Everybody's Catching It!

(*Continued from page 41*)

one out of the eleven payments, "Yes, sir," is the correct answer when the motorcycle policeman orders you over to the side of the road and demands: "Are you the OWNER of this bus?"

It's a curious thing how a brand-new car will thrill a man. Even if he has had his last car only one summer, there will be a certain zest in trying out a smarter model. There seems to be no sentiment in the ownership of an old boat. Back in the buggy days, men became so fond of horses that they hated to see them sold, and I have known people to wax sentimental over the sale of a bicycle that had been in the family a long time. But I have yet to observe a fellow shed any tears when he had to turn in a last year's automobile for a this year's model.

CURIOUSLY enough, the only jaunting car to which I look back with anything like a tender feeling was one of the worst cars I ever had. It was my first automobile, back in the crank-the-engine era. Removing a tire was an afternoon's job for two men and six helpers. You could take off ten pounds thinking about a puncture.

The headlights were fed through a rubber tube from a tank of gas clamped under the running board. To turn on the lights you opened the tank with a "key," and then rushed to the front of the car, opened the door on each lamp, and tossed in a match. It was all quite exciting.

To start this car required strength, perseverance, and patience. In summer it was hard enough, and in winter, ah, there was where the fun began! Here was the formula for getting that bus into action:

1. Lift hood and open pet cocks.
2. Squirt gasoline into pet cocks.
3. Crank car a dozen times to suck gas into chambers.
4. Pour boiling water over the manifold.
5. Set "gas" and "spark."
6. Crank engine rapidly, jumping away nimbly now and then to avoid a fractured arm.
7. Repeat until exhausted.
8. Phone for a mechanic.

When you got an engine like that going you never shut it off that same day. It was too risky. I had that car for three seasons, and it did a lot for my physical well-being, although it didn't help my disposition any. I wouldn't want another like it, but I was a little sorry to see it go. It had given me so many hard battles that I respected it. I missed its stern, unyielding character. This, however, was an exceptional case.

I usually get a great thrill out of a "fresh-picked" car. There is something about an automobile while the fenders are still whole, the body unblemished, and the motor free from static that knocks me simple. After it has been mauled by a few taxicabs, coal wagons, and street cars, and the metal parts have taken on the snappy appearance of a bunch of old junk, I begin yearning for something easier on the eyes.

The minute a man lets his car go without washing after a muddy spell, fails to get peeved when he finds a hub cap rusty, and shows no emotion at the discovery that somebody has struck a match on the door, he is practically in the market for a new car.

HOW times have changed with respect to selecting a new automobile!

A few years ago choosing a new machine was a serious and important undertaking. It was regarded as requiring great study, deliberation, and investigation. Not so many years back a man had to be wary. It was considered proper precaution, after becoming interested in a certain car, to look up owners of the same make and find out whether it would always run, how dependable it was in cold weather, and if it would go uphill unassisted.

"Performance" was the big item. Body lines, trimmings, and color were relatively unimportant. What a buyer wanted to know first of all was: "When I go out in it, what are the chances of getting back?"

"Is it any good on the hills?" was another leading query, and it was the

Digitized by Google

custom of all automobile manufacturers to compete in hill-climbing contests and fill the newspapers and magazines with advertisements of what their rattlers could do when driven to it.

Cars in those days came in four standard colors—black, blue, gray, and red. Any other color was a "Special." Those were the days when you bought a car marked $3,500 and then found you had to buy $1,000 worth of accessories before it was ready to go places and do things.

Today performance is taken for granted. The assumption, generally speaking, is that all automobiles will do what is expected of them, and that at no time will a man have to get out and walk back a few miles for a farmer and two oxen. In these modern days a buyer doesn't ask, "How good is this car?" He asks, "What other color schemes have you?" or "Haven't you something a little more dazzling?"

My uppermost thought when I got into my first automobile was: "Will it blow up before I get it home?" When I bought my latest zipper, my chief thought was: "Have I shown good color taste, and, if so, will there be many other cars of similar hue on the road?"

Many a man is influenced in his selection of a new car by a secret yen to make the neighbors jealous. It's petty, perhaps, but we all have our failings. Frankly, when my friends blossom out in the new Fifty Eight in four colors, I immediately begin thinking that my position (if any) in the community, will be seriously imperiled unless I trade in the old car for something fresh and dizzy.

EVEN when a man thinks the old six-cylinder chestnut roadster good enough for another season, his wife is likely to want something more stylish. And if Grommer and Popper are satisfied, the children will look snootily upon it and never fail to bring home the tidings that Mr. Winterbottom, the paperhanger in the next block, has just bought a new car, and, gee, it's a wow! It makes ours look like a zinc bathtub."

I get suspicious the moment my wife comes to me some evening and remarks, apropos of nothing at all, "There's no use of our even thinking of buying a new car this year, is there, dear? The old one is good enough, don't you think?"

I know at once that she has noticed Mrs. Whooziss passing by in something out of the salesroom, or that she has been reading those alluring automobile advertisements. Last June, for example, a like remark like that was the forerunner of our heaviest plunge in the matter of motor-car purchases.

"We've only had our present car a year and a half," I replied. "There isn't a thing the matter with it, outside of a few minor engine troubles. I'm going to run it another year at least."

I had it overhauled and put in first-class shape at no little expense. Not more than a month later, fascinated by an attractive window display of cars in one of the big Broadway salesrooms, Mrs. Phillips and I entered, "out of mere curiosity." These cars were of a much more expensive make than any I had ever had, and when I went into the salesroom I didn't the remotest idea of buying one. But after a half-hour with those modern, self-powered, don't-take-no-for-an-an-

Don't neglect

nature's warnings—headaches, tired digestion, bad breath

—are signs of danger from within

OUR days *are* crowded. Every minute is important. That is probably the reason why so many of us neglect headaches, fatigue, tired digestion, bad breath—those warnings of danger from within.

For, it cannot be denied that "covering up" bad breath with a disinfectant—taking drugs for a headache—trying to thwart constipation with a pill—are merely ways of evading the issue.

We should attack the cause of the trouble—intestinal toxicity. And this usually needs care in eating, drinking and exercising.

However, as we find it difficult to keep up any program—here is a suggestion that has helped countless people to remain "intestinally" healthy. ENO's Effervescent Saline provides exactly the assistance needed to thwart the threat of constipation.

For ENO is a delightful, refreshing laxative that never gripes nor interferes with your daily routine. It simply flushes and cleanses your digestive and eliminative system.

Its alkaline reaction tends to sweeten your stomach and clear your head for the day. Makes it valuable against acidosis too. And, of course, it does not create a habit.

Try ENO in the morning or evening for one week. Your druggist has ENO at 75c and $1.25 a bottle.

Prepared only by J. C. Eno, Ltd., London, England. Sales Agents: Harold F. Ritchie & Co., Inc., Belmont Building, Madison Avenue at 34th Street, New York.

ENO — health precaution — will cost you less than 3c a day.

When you get up, simply take a glass of water and add a generous teaspoonful of ENO. *Taking this sparkling, delightful saline regularly will help to keep you fit and eager through the hardest day.*

For a business headache, nothing is better than a glass of ENO. *You can get it at the better soda fountains everywhere.*

swer motor-car salesmen, I was a live prospect. Those boys know how to work on a man, and they take woman customers the way Grant took Richmond.

Well, after being escorted around and given a lecture on the appointments and refinements of the various models, the old car didn't seem much of a bus. I had left it in front of the salesroom, where, at the moment, the company's liveried doorman was examining it with a critical air. It struck me that he was puzzled how such a piece of junk got there.

We were particularly fascinated by the hinky-dinky innovations inside and outside the new models. Extra wheels set in the forward fenders, a bronze radiator figure of a Greek goddess defying the detours, a couple of very smart headlights, and an electric cigar lighter made a tremendous hit with me.

All my life I had wanted a car with an electric cigar lighter, and now, the tragedy of it, I had given up smoking! Still, it represented the answer to a boyhood prayer. It was a nice nickel-plated cigar lighter on a silk cord. The salesman, quick to discover my weakness, pounced upon it like a hawk. "Won't you get inside and see how cozy and comfortable this car is?" he asked. "Try the cigar lighter. Notice the innovations on that dash. Isn't that a lovely clock?"

We got in.

Just about that time my wife had discovered "the loveliest vanity case, and combination ash tray and cigarette case." I imagine she had always wanted a car with a vanity case in it.

"And look at these exquisite vases!" she exclaimed a little later. "My, but this is a splendid car, isn't it, darling?"

AT THAT very moment I knew we were in danger of sinking by the head, and by sheer power of thrift over desire I managed to shorten the interview, thanking the salesman for his interest and assuring him that I would think it over.

"You would want to trade your old car in, should you decide to buy?" he asked.

"Yes," I said uneasily.

"Is it here, where I could see it?" he asked.

"Not very near," I said, taking a squint at the old coffee-grinder, "and I haven't time to let you appraise it now. You can do that later, if I decide to buy."

I was really afraid he would see the old car. It had seemed a pretty fine automobile when I entered the salesroom, but now I had a feeling that if this salesman saw it, we should impress him as people below his station of life.

"It would be a mistake to go in for one of those cars," I said when we got home. "We don't need it. Next year, yes, maybe . . . but not now."

My wife agreed with me, although not very warmly.

However, I couldn't get that cigar lighter out of my mind. Or those smart headlights. Or the intricate dashboard with all the knickknacks on it.

"You don't smoke," my better judgment would say. "What do you want a cigar lighter for?"

"I know," my suppressed desire would answer, "but it's something I've always aspired to call my own."

I was weakening fast, but I might have survived had not the salesman been a great little follower-up. He sent post cards, dropped me letters, and telephoned the house and office. Finally it got so that when I was saying "No!" I was nodding my head "Yes!" And, frankly, the old car didn't seem so good. It ran beautifully, looked nice enough, and answered all purposes, but it was decidedly short of gewgaws. Mrs. Phillips began complaining very much about the interior, and I knew she was thinking of that vanity case.

Then one day the salesman offered to take us for an afternoon's outing in one of the new models, and, knowing I would be hooked, I accepted. When he let me drive, it was all over but the signing. I even bought a cigar to try the lighter.

HOW a man will weaken in his determination to get a big allowance on the old car! I had determined not to buy a new car unless I got an allowance of $1,200 on the old. Now, however, the salesman consulted his little book and said the best the company could do would be $600! I nearly swallowed the cigar, and the lighter too.

"Ridiculous!" I cried. "Why, just look at that car! The paint is like new; I've just had the motor overhauled; it's in perfect condition!"

"It looks pretty well shot," argued the salesman. "The lines are old-fashioned, you know. They don't make radiators like that any more. The clutch is noisy. I wouldn't be surprised if the rear-end was all gone."

He spoke so disparagingly I thought he might be right.

"It will give whoever buys it two or three years of good service," I protested.

"In another year it will be so funny-looking nobody will want to be seen in it," he continued. "Styles have changed completely, mister. Look at that hood! You don't see anything like that on the up-to-date models, do you?"

"That hood does look odd, doesn't it? Well, can't you make it $700?" I urged.

"I'll see what I can do I'll put up an argument with the manager and see if I can't make it $650. How will that be?"

"That will be all right, I guess," I said limply.

We went back to the store. He saw the manager. They went into a huddle behind a palm for about ten minutes. Probably they were discussing the baseball scores. After a time, however, the manager came out and looked at the old car. He walked all around it. He looked at it from the port side and then from the starboard. He knelt down and looked at it from astern. Then he went forward and squinted at it from the front.

I could see that he didn't think much of it.

Presently he lifted the hood and peered inside so intently and so long that I thought I should suggest, "If you want anything you don't see, ask for it."

He shook his head sadly and any fool could tell that he had no use whatsoever for the engine, the oil can, the flywheel, and the rubber hose.

Then he stood on the left running board and jumped up and down on it, shaking the car like a ship at sea.

He repeated this procedure on the other running board. Next he got into the car and drove off in it with such a displeased expression that I was afraid he might have made a sudden resolution to drive it off the nearest dock and be done with it.

He came back shortly, looking so dejected as he alighted that it was perfectly clear to me something about my car had ruined his day.

"That bus will take a lot of fixing," he said. "I don't see how you have been getting around in it. Hasn't it been annoying?"

"More or less," I lied.

"Well, the salesman's allowance of $300 will have to stand," he said flatly. "I couldn't possibly yield to your request to make it $350."

This was going too far.

"Nobody said anything about $350," I said heatedly. "The allowance was $600, and I thought maybe you would make it $650."

"There must be some mistake," insisted the manager, as he went into another huddle with his salesman; after which the latter came to me, looking sheepish, and said it had been his error and that he never should have quoted an allowance greater than $500, but, considering the misunderstanding, he would make it $525.

HIS manner was that of a man doing me a favor at a great personal sacrifice. Both he and the manager seemed so distressed about it that I didn't have the heart to press the matter further. So I accepted the allowance and signed up.

This seemed to please them. The salesman shook hands and congratulated me. Then the manager shook hands. They called over a couple of assistant managers to shake hands.

A few weeks later I came back to make a complaint about certain minor defects in the car, and couldn't get anybody to shake hands with me.

That car is a good enough wagon, and should satisfy me for another season or two. But it won't. Already I am stopping in front of showroom windows and admiring new models. Again I am pausing far too long over those wondrously colored advertisements that make the magazine pages so Arabian Nightie.

Today any man with $2,000, or notes to that effect, can step into a salesroom and buy himself a car as ornate as anything the Maharajah of Indore could have bought for $10,000 a decade ago.

And every season they are getting harder to resist.

That's the trouble.

If I had the money, I'd be a mark for a salesman trying to sell one of those de luxe sedans with the burnished silver hood, the polished aluminum body, and the gold trimmings, fore and aft—the kind Adolphe Menjou rides in in the pictures. I have a weakness for an automobile that is part dental chair, part Christmas tree, part royal coach, and part circus wagon.

"There's no use of even thinking about a new car this year, is there?" asked the wife a few evenings ago.

"No," I replied.

"Aren't those new models peachy-looking?" she remarked.

"Uhuh," I agreed.

There's danger ahead. We're getting newcaritis.

The KEYS to Easier Writing Spelling and Reading

YOU give these modern educational keys to your child when you supply him with a Portable Typewriter as an aid in all of his primary studies.

Learning to write with type really is fun for the little student. Quick, clear results are easy to obtain. Tapping the keys is a pleasant and natural occupation, and the letters and words produced are just like those which the child sees in books!

Right there the child finds priceless inspiration to further effort, and every word he types is speeding him along the three basic lines of learning,—writing, spelling and reading. Investigate and the facts will convince you.

WELL-KNOWN EDUCATORS SAY:

"Initiative is fostered . . . not by scolding, not by bribing . . . but by making the every day tasks of childhood more interesting."
ANGELO PATRI
PRINCIPAL, PUBLIC SCHOOL 45, NEW YORK CITY

The Great Adventure of Adopting a Baby

(*Continued from page 44*)

that at *one* adoption nursery in *one* city where I applied I was put down as applicant one hundred and ten on their waiting list proved to me that the idea of bringing the motherless babies and the babyless mothers together has at last taken hold of the social intelligence in a large way.

But more than this. I have discovered, since our own venture, a surprising number of people—typical, of course, of still thousands more—who are at the hesitant, fearful, wishful stage: Who are wondering if the thing really *works*, as the woman at the tea party put it; who are holding the idea before them as a sort of vague, future solace for a present loneliness; who are "thinking about it," and will probably continue to think about it, and nothing more, all the rest of their lives.

The tragic element, of course, in all these cases of those who are actually searching and those who are merely thinking, is that so many child lovers are by nature childless. The beautiful part is that there is a cure for this particular disappointment for those who are willing to accept it and pay the price for it.

NOW, to start off correctly, I should say that the first thrill in adopting a baby comes when you win your husband's consent to the whole procedure. Nine hundred and ninety-nine men out of every thousand approached on such a matter will rear themselves up in great dignity and say, "Never! If we have no children of our own, I shall certainly not consent to adopt one!" That is just what my husband said, and did, upon the first intimation of my plan. (I wish you could see him now!)

I remember distinctly the time he delivered himself of that pronouncement. We were living in the apartment where we had gone housekeeping. Curiously enough, most of the couples in the building had been married only a short time and were also making their first home. Before long, in spite of a certain muted clause in our contracts, babies began to pop up on every floor. At the end of the third year, we entered the front door through an aisle of perambulators; the back lawn was dotted with kiddie coops and toddling infants; and groups of mothers who could discuss just *one* subject sat about under the trees. I began to feel indecently exposed to the public eye when I left the building without a baby carriage to push in front of me. It was one night when I had considerable of a heartache that I broached the adoption idea to my husband.

"Never!" he said, etc., etc., as set forth above.

But, being a woman, I rather thought it might be possible to reopen the subject later. I did. I began to mention casually certain facts I had read about child placing. When I heard of anyone's having foster children, I spoke of it. Gradually I found that my husband was listening with an interested look in his eyes.

When we moved into our own home, the lawn and shade trees cried out for a baby to enjoy them; the fireplace looked lonesome on Christmas eve without a small stocking; there was a certain little upper porch simply *made* for a child to sleep on. All these facts stabbed us, of course. And then as we grew to know our neighbors, what do you suppose we discovered? The charming little girl down the street and the lovely baby in the house directly behind us, were *both* adopted children! I believe that clinched the matter. For one day my husband said: "If you really feel you would like to look for a baby, I'm perfectly willing."

THEN the search began. The first day I approached the door of a famous adoption nursery in our nearest city, my heart was thumping. My idea of the place was that somewhere in the building there would be a huge room lined with babies, and that I would walk slowly around on a tour of inspection, finally select the most perfect infant there, and walk off with it.

Now, this is not the way the thing is done in highly organized adoption nurseries. What happened was this: I was met by a pleasant member of the committee in charge. She heard my story and jotted down the facts she desired to know about my husband and me and our home and so on. Then she told me the rather disheartening news that there were many, many applicants on their waiting list, and that it would probably be six months or a year, perhaps longer, before they would be able to offer me a child. But, she went on to say, while they would keep my application in mind, it would be well, in the meantime, for me to consult other agencies for child placing, such as the Children's Aid Societies and other adoption nurseries.

There were one or two points she stressed which are worth repeating. It is easier to find a little boy than a girl. Most applicants, for some reason, ask for girls. It is also easier to get a very young baby, from two weeks to a month old, than to find one a year or two years old, for the latter are more in demand.

And there are two sides to the problem of age which the applicant must consider. In taking a child a year old, for example, the foster parents have a better idea what the baby is going to look like in features and coloring; they will be taking it when it is at its most cunning infant age; when it will respond to affection and make its immediate appeal with winning ways. They will also miss the whole trying first year of colicky nights and chilly, early morning bottles!

But, on the other hand, when a man and woman take to their arms and hearts a two-, three-, or four-weeks-old baby, it is, in a sense, more nearly their own child. They begin its care at the same time most other parents assume that charge. There is no phase of its young, growing life they have missed. They may pass through a hollow-eyed stage occasionally, caused by lack of sleep, but in later years I fancy these very ups and downs (and those words are used advisedly!) will make the tie between parents and child more natural and indissoluble.

However, as I said before, there are advantages connected with every age, so that that particular phase is almost negligible if all your other requirements are met in the baby you find.

But another more important question will be asked you when you start your search for a child. It will be necessary to state whether you want a foundling baby, or one born of married parents which for some reason is left homeless, or one born of unmarried parents. The woman I talked with at the first nursery told me that many people wanted so-called foundling babies. They wanted to feel that the child's past was an absolute blank, that they knew nothing of what was behind it, and could start in as its parents with no facts or names in any way connected with the child which they, themselves, did not supply. Other applicants made a special point of asking for a baby born of married parents, while still many others preferred a child born of unmarried parents because such children for adoption are likely to have finer blood.

My husband and I felt that we wanted to know our baby's background, enough of it to be sure that she came of good, healthy, intelligent ancestry. And at last, in the most unexpected time and place, such a baby was given us. And I can promise any other searchers, that if they make their desire known at enough of the proper agencies and will be a little patient for a few months, they will meet with like success.

RIGHT here I should like to meet and slay, if I can, the great giant bugaboo that deters most childless couples from venturing forth on the quest.

"It's all right when the child is little," they will chant fearfully, "but as it grows older, how do you know it will *turn out well?*"

You don't know, of course. You don't know what any life may be twenty years from now. Strange forces are constantly at work on the delicate entities we call souls. In no other time have these forces been stranger or stronger than at the present. If you had a son of your own tomorrow, you could not safely predict what sort of person he would be when he became of age. It is, I think, rather an awesome thing to start training a young life just now. But it is also the most challenging adventure of which I know.

And in regard to this old question of heredity and environment, this is the conclusion I have come to after what has naturally been rather pointed thought on the subject: Our physical features, our idiosyncrasies, and our mental bents come to us through the long bloodstream of ancestry. But our characters—that is, the differing ways in which we react to right and wrong—are the result of the example and precept of those with whom we have lived from childhood to maturity.

In other words, it seems to me that the boys and girls who have a happy, normal home life, who have fathers and mothers who are their best friends and who teach them, along with their play, to love God and their neighbors, surely cannot go very

far astray when they grow older. In that case, it strikes me that the big matter in adopting a baby is whether *we* are going "to turn out well" as parents!

And now I come to the place where I shall try to follow the wishes of the tea-party lady and be utterly honest. The facts I am about to set down come in the nature of a confession. But I give them because they may be of service to other foster parents, present and future. The truth is that during the first months we had our baby, I had times of black discouragement.

In the first place, I had been one of the least domestically harassed of women. I had taken my housekeeping lightly and enjoyed it. I was free as air. I had been in the habit of deciding at breakfast that I would go into the city that day, for no better reason than that the sun was shining and I felt like a little diversion. When my husband went on a business trip, I packed my bag and went too. We loved starting off on a summer morning in the car for an hour's ride and then suddenly changing our minds and direction and making a full day of it. We are that kind of people. It had not occurred to me how completely a young baby in the house would change our easy-going habits.

But at the end of the first month, I did have a decidedly tied-down feeling. Our maid did not stay at the house at night, so even such a trifling outing as going to the movies had to be carefully planned ahead. Moreover, Julia, unlike most of her race, had had no experience with babies of any color and was panic-stricken if left alone with the child even for an hour.

IN ADDITION to the lack of freedom, there was the lack of rest. I had always been the world's prize sleeper. My only problem had been to keep decently awake after my usual bedtime. But when the specialist, to whom we took the baby, ordained that she should have a ten P. M., two A. M., and six A. M. bottle, things were different! Despite the noble way in which my husband rose to the occasion, I found myself lying night after night with one ear cocked for the alarm clock or for sounds from the baby in the next room. During this period I moved about through the day in a continual headache and began to look *peaked*, as the elder folks of my native town would say. As I glanced in the mirror, I felt shocked. Was I, I wondered, losing every vestige of my small claim to good looks?

And it was just at this time that my husband began to show a frightful tendency to forget important anniversaries. Instead of bringing offerings of candy and flowers, he would come bounding into the house with pink rabbits and woolly sheep sticking from his pockets! Could it be, I inquired of myself dismally in the dark and sleepless hours of the night, that by taking the baby I had destroyed that flower of romance which, for us, had bloomed with such great luxuriance?

Then, too, there was the matter of the baby's looks. When it is your own child, its features, no difference what they are, are a family affair. If she has her father's nose, it is considered just too cunning for anything, even if the Jones nose *is* a bit large. And if she has Grandma Smith's mouth, no matter if it is an unduly wide one, it has a peculiar tribal sanctity.

But, when there is no family standard of comparison, one is likely to wonder a bit about the daily changing physiognomy of a foster baby. At least, I did. I was convinced, first of all, that the child was cross-eyed. I agonized for weeks over this in private, until I learned from an experienced mother that most small babies have that appearance at times. As a matter of fact, our little girl's big, brown eyes are now her chief beauty.

Then I suffered on account of her nose. The more closely I considered it, the more peculiar it looked to me. It finally turned out to be a darling and perfectly normal little "pug." Then there was the chin. I had never thought of it as apart from her other features until a relative thoughtfully suggested that it wasn't quite so large as it might be. After that I studied the chins of all the babies I saw for weeks!

There was one other burden which I bore during those first months, which, for want of a better name, I shall call a sense of frustration. The trouble was that I had had, during all my married life, a very vital interest aside from my home-making. I had been writing short stories in a modest sort of way, and I loved doing it. The work had become a part of me. When we added the baby to our family, all my close friends said at once: "But what about your writing?"

My answers were almost jaunty. I explained that I meant to go on with it just as usual; that I had read the most charming accounts of how other women rocked the cradle with one hand and tossed off literary classics with the other. Why should not I?

Why, indeed?—except for the reason that I don't believe the thing can be done unless the woman attempting it has either an extraordinary physique or an equally extraordinary nursemaid to whom she delegates the care of the child. I didn't happen to have either one. So the stories I wrote during that period all read as if the author had a dull headache when she did them. She had! And for that reason they simply didn't *click*. And this, of course, made me rather unhappy.

But now, having confessed with the greatest candor to the worries of that early period, I want to make a blanket statement to the effect that they are all gone! To steal Tennyson's fine phrase for my own purpose: "They had their day and ceased to be." And I should have had faith and wisdom enough to know that they were but natural, temporary discouragements which all mothers everywhere no doubt suffer in part.

BUT one other question remains yet to be answered. And this question we find ourselves being asked increasingly often as our baby grows out of infancy toward little girlhood. "Will you ever tell her she is an adopted child?" our friends inquire.

At first, when we started out to find a baby, we both felt that the ideal condition would be one in which she would never know that she had not entered our home in the usual fashion of babies. However, as we pondered the matter and heard what certain experienced people had to say regarding it, we changed our minds. We have decided to tell her, but to do so while she is very young. The committee woman at one adoption nursery gave us this idea by saying it was one of their stipulations that all parents receiving babies from them should promise to tell the children the truth before they reach school age.

And as we considered the arguments, we found them to be sound. If a foster child grows to the period of adolescence without knowing the facts, the sudden discovery of them—which is almost sure to occur in the way least expected—will come as a shock, the degree of which will depend upon the youth's emotional make-up. But, at the best, the child will feel that through the years a secret was kept from him; that there was not between him and his parents the perfect openness and candor that engenders the finest confidence. If he is unusually sensitive, he may distort the simple fact into abnormal proportions. At the very time when he most needs the full complement of sympathy and understanding, he may withdraw into himself.

On the other hand, if a child grows from infancy with the truth about its foster parents interwoven with the loving care that surrounds it, there will be an unconscious and gradual acceptance of the facts constantly blent with the daily contentment which is every child's heritage. There may come sometime a perfectly natural curiosity for certain details which I feel should be met tactfully yet honestly, if the child is old enough. But there will be no shock.

I HEARD a story that illustrates the way in which a small child may be told quite happily. A little girl came running in from play one day with a distressed face.

"Mother," she cried, "am I a 'dopted child?" Her mother smiled serenely at her and replied, "You certainly *are*, but I wouldn't talk about it with the other children. It's not nice to boast."

The little girl relaxed at once and looked at her mother with the greatest interest.

"But what is a 'dopted child?" she asked.

"Well," her mother said, "I'll tell you. Once in a while little babies come to homes and—it's sad to say—their parents really don't want them so awfully much. But an adopted baby is one that was wanted so badly that its daddy and mother just hunted and hunted until they found it!"

I can fancy how even in her grown-up years the warm security in that little girl's heart will help to color her life.

And, in similar fashion, among the answers to all the childish questions of how everything came to be, given perhaps in a "once upon a time" story, it seems to me it will not be hard to give such information as is essential.

At present, our little girl is growing daily in sturdiness of body, in brightness of mind, and in all the adorably sweet ways of childhood. And with every week that goes by, she grows dearer and dearer to our hearts.

I can emphasize all this best by saying to all the childless men and women who may read this article that I hope they will be moved to start out at once in quest of a baby. Their home is not normally complete. As dear old Peter Grimm said in Belasco's beautiful play, "They are missing The Child in the House." And they can find one if they will.

And if a longing woman hesitates for fear her husband may not be happy later

Boiler—*plus* Radiators—*plus* Balsam-Wool —*there's* a Modern Heating Equipment

THE boiler to make heat, the radiators to put it in the rooms—the Balsam-Wool Blanket to *keep it in.*

There's a *modern* heating equipment—as good five or ten years from now as it is today.

After all, isn't it absurd to buy a good boiler, feed it expensive fuel and then let a third or more of the heat escape through the walls and roof?

Especially when you consider that Balsam-Wool permits the purchase of a smaller boiler and fewer or smaller radiators—saving all or at least a large part of its cost.

Isn't it just as absurd to go on year after year in an old home, using much more fuel than you need, when a Balsam-Wool Blanket in the attic will stop most of the loss?

Balsam-Wool is *flexible.* It tucks into every nook and cranny—seals every crack—as only a flexible material can.

Balsam-Wool is *thick*—a *full inch* is recommended. It stops heat as no thin insulation can. Balsam-Wool is not a substitute or "combination" material. It is made to accomplish just one thing—and does it.

Balsam-Wool is sold through established lumber dealers. You should know more about it. Send the coupon today for free sample and instructive free booklet.

WOOD CONVERSION COMPANY
CLOQUET, MINNESOTA

Makers of Balsam-Wool, the Flexible Insulating Blanket. Also makers of Nu-Wood, the All Wood *Insulating Wall Board and Lath.*

Sales Offices in Principal Cities

Balsam-Wool is a guaranteed Weyerhaeuser product—a blanket of fluffy wood fibre that looks and acts like sheep's wool. It is TRUE Insulation—keeping the house warm in winter and cool in summer—because it is—

FLEXIBLE-THICK
EFFICIENT
WINDPROOF
WATERPROOF
FIRE RESISTANT
VERMIN PROOF
LIGHT WEIGHT
PERMANENT

with a foster son or daughter, I can assure her that her fears are groundless. When the release papers came for our baby's adoption, they were addressed to me and I read them first. In the evening I gave them to my husband. He went slowly over them and then sat with a dazed look on his face.

"What is the matter?" I asked.

"Do you know," he replied, "it comes to me as a shock to realize that our baby is not our own by birth."

I felt that that was the sweetest out of all the consistently fine things he has said and done in his new rôle of father.

So, as a summary, I give you the inventory of my great adventure. On the one side are these undeniable facts: I have a few more wrinkles in the region of my eyes; I have played less bridge and gone to the theater less frequently; and I have written fewer stories; and I was compelled to refuse a very flattering offer from a well-known lecture bureau to read my own immortal works under its auspices.

But the following, too, are facts, and do I need to tell you that they far outweigh the others?

I have two soft arms that hug me close; and a little head that just fits in the curve of my shoulder; I have the music of baby laughter, and small feet pattering through the rooms; I have a little daughter to whom I can sing the songs my own mother sang to me; a little girl to make birthday cake for and trim Christmas trees. And stories? If I'm not giving readings before women's clubs, I want to state with the most shameless vanity in the world that I've just invented a thrilling tale of three little toads that live under the lilies in the garden, to the rendering of which my baby listens with wide-eyed, breathless interest to the end! I consider it a triumph!

But one cannot enumerate all the delights of parenthood! The present joys, the future hopes! Is it not enough to repeat that my husband and I feel that now at last we have what God ordained as man's chief treasure: We have "The Child in the House!"

The Trail Eater

(*Continued from page 57*)

you what a real leader will do! Too bad you gave Tokon to him! Tokon will beat the Syndicate yet!"

Herrington was furious. Luce finally got him into the Dog Room and pleaded with him not to make a fool of himself.

Before Rance could answer, a roar from the main saloon drew them running. The bookmaker had chalked up another announcement:

"*Kerry Wayne passed Fifty-mile, every dog in the traces, Tokon leading loose!*"

"Tokon leading loose!" The jostling throng went wild. "Hey, Rance! What have you got to say about your outlaw pup now?"

HERRINGTON slammed his emptied glass on the bar and whirled to face the crowd. His great arms were bent at the elbows; his hands clenched. He was white with suppressed fury.

"What have I got to say?" he thundered. "Nothing! My money talks for me! Get that, all of you!" He thrust out his jaw and glared at them from narrowed eyes. "Any time you birds think I made a mistake on that dog, all you have to do is string your silver. Put your pokes on the bar, and, by heaven, I'll cover every one of them, no matter what they weigh!"

He stood backed against the bar. "What? Stakes not high enough yet? Then I'll lay you fifteen thousand on Slim against the field. No! *Fifteen thousand on Slim against the Trail Eater!*"

"Awh, you're crazy, Rance!"

"Crazy? I never was saner in my life! Fifteen thousand doesn't draw you, eh? Well, what do you want then? I'll put up anything I've got—anything from my watch to my mine!"

There was a laugh. Someone in the back of the room jeered: "You know you're safe on that, Rance. You know there's no one here with enough dough to put up against the Gray Wolf."

"The hell there isn't! Let anyone show me a certified check for—for—two hundred thousand dollars, and I'll bet the Wolf against it!"

He began plowing his furious way through the mob. "I'll show you I mean business. Here!" He stood before the table beneath the betting-board. "Post that bet for me—and do it quick—the Gray Wolf against two hundred thousand dollars!"

"If I post a bet like that, you'll have to make good, Rance. No backing out at the—"

"Backing out!" The implication goaded him to further madness. "Here, Luce. Settle with this fellow right now. Make out a bill of sale in blank for the Gray Wolf, and I'll sign it. No!" he roared, as Luce attempted to dissuade him. "Cut that chatter. I pay you to do my legal business for me. Now, you do it, or I'll get someone else. . . . Give him a piece of paper, you!" The bookmaker tore a sheet from the back of the betting-book and with a shrug handed it to Barton.

While he wrote, the race was forgotten. Men stood craning their necks toward the board, where the bookmaker's upstretched hand was writing the fateful sentence.

Barton finished his screed. Herrington took the paper, read it, and turned his bloodshot eyes toward the board. White against the black the words stood out—the biggest bet ever made in Alaska!

"*Offer Gray Wolf Mine against certified check for two hundred thousand dollars, on Slim Carvey against Kerry Wayne.*"

Without a look at the hushed, waiting crowd, the gold king suddenly bent over the table and scrawled his name across the bottom of the sheet. He handed it to the bookmaker.

"That's how Rance Herrington backs his judgment!" he said.

A FEW minutes later Luce Barton was called to the Dog Room to answer the telephone. Kitty's voice greeted him. She wanted to see him upstairs immediately. He found her waiting for him in the dark, narrow hall outside the women's betting-parlor. Her eyes were glowing with excitement.

"What's this about Rance betting the Gray Wolf against Kerry? Did he really do it, Luce?"

"Yes, the darned fool. But don't worry about it, Kitty. He's perfectly safe. He can't lose even if someone does take it up."

"But Kerry's coming strong again! He might beat Slim!"

"Not a chance!" He glanced up and down the empty hall, then bent his head and spoke close to her ear: "You got the best time Kerry ever made, and it's not fast enough to beat Slim, especially when he's so far ahead."

"But if someone takes that bet and Kerry *does* come in first, he'd win the mine, wouldn't he?"

"Ye-s, of course, but—"

Kitty caught his arm, her face sharp with eagerness. "Come here!" She drew him into a vacant room across the hall and closed the door.

"Luce Barton!" She was looking straight into his eyes. "If I told you something that would make it possible for you to win the Gray Wolf, would you take up that bet and split fifty-fifty with me?"

He laughed. "That's nonsense, Kitty. Kerry hasn't a chance of coming in before Slim. But, of course, if you *did* tell me anything like that, Kitty, and I won the mine, I'd certainly divide with you."

"All right!" Her words came with a rush. "You remember the day you and Rance came to me to find out Kerry's time? Well, you made me good and mad, both of you. I told you Kerry made that twenty-six miles in two hours and a half. I told a lie—*he made it in two hours flat!*"

"WHAT?" Barton was staggered. "Are you sure of that?"

"Yes! Now do you see what I mean?"

"Wait a minute. Let me think this thing out." He looked at Kitty appraisingly. If she wasn't so unreliable! But there was so little time left! He'd have to trust her.

He began rapidly: "Listen, Kit! The Gray Wolf took out something like five hundred thousand last year. I want to take up that bet for both of us. But I can't do it unless you and I can figure out this problem— Right now, Slim's leading Kerry on the home stretch. Kerry can beat him. But Bart Pelkie's hidden at a turn in the trail just a mile this side of Safety—that's twenty-one miles from Nome. He's tapped the telephone line and knows the position of every driver in the race. If anyone is crowding Slim too close, after Slim passes him, he will put a small blanket in the trail, sprinkle it with snow, and make his get-away. The—now don't interrupt me—*the blanket is thrust full of porcupine quills.*

"The next team along runs into it; and you know what that means. As matters stand, that team will be Kerry's. On the other hand, if Kerry should get ahead of Slim before he reaches Safety, then the blanket goes out just ahead of the Trail Eater. Gets him either way, see? Not—

Why it is so *easy* to learn to type on CORONA

OUR little boy has loved Corona ever since he was big enough to notice the tters."

"I learned to use Corona when I was sixty-ght. It is much easier than writing by hand."

Scores of letters like the above have come us. They show how easy it is to use Corona. children too young to hold a pencil can e Corona, anybody can. If old people whose handwriting has grown shaky can use Corona, anybody can.

To say that it is easy to operate Corona is understating the facts. It is *astonishingly* easy. Beginners, after reading a helpful little book that is given free with every Corona, can learn the fundamentals in just a few hours.

In the very beginning, Corona was designed with the idea that it would be used by people who had no typewriter experience.

That was twenty years ago. Corona is still built with the beginner in mind. All the needs of the amateur typist have been studied by Corona engineers. Every year we have improved Corona—made it more convenient. Here are a few advantages which make it the easiest typewriter in the world to operate:

Adjustable Key Action—The touch can be made light or heavy to suit your requirements.

Adjustable Paper Guide—Insures uniform margin on all pages of a manuscript.

Back Spacer and Margin Release—These are conveniently located on the keyboard.

Carriage Return Lever—This is made extra large and convenient. It enables you to perform the two operations of spacing and returning the carriage to the starting point with one sweep of your hand.

Extreme Visibility—Holds paper at correct reading angle.

Key Spacing—Same as on office typewriters.

Standard Keyboard—Four rows of keys, exactly like a big office machine.

Corona has many, many other features. There is not room on this page to describe them all. Other portable typewriters have some of these features. But no other portable has *all* of them.

In making Corona easy for beginners to operate, we accomplished another result—an unforeseen result. The very features which enable beginners to write more easily, enable accomplished typists to *greatly increase their speed.*

You owe it to yourself to drop into a store where typewriters are sold and see Corona. The minute you lay eyes on it you will realize why a million people use it—why Roosevelt took one to Africa—why 30,000 Coronas were used in the World War—why more novelists, more newspaper men, more business men, more schools and colleges use Corona than all other portables put together.

For a small down payment you can take a beautiful new Corona home with you today. Don't neglect this opportunity. Don't let another day pass without doing something about it. Know *now* the joy of owning a sturdy, speedy, smooth-operating Corona — the World's Champion Portable.

An interesting illustrated booklet called "Corona Typewriters" which describes Corona in detail, and contains beautiful illustrations of the new color models, will be sent you upon request. No obligation. Simply mail the coupon below.

ORONA IS THE WORLD'S CHAMPION PORTABLE ON 8 EXCLUSIVE POINTS

STRENGTH: *Strongest frame of any portable typewriter — solid one-piece aluminum, rigidly braced.*

SIMPLICITY: *Fewer parts than any other standard-keyboard typewriter.*

COMPLETENESS: *More big-machine features than any other portable typewriter.*

EASY TO LEARN: *Corona design is the result of 20 years' study of the needs of beginners.*

WAR SERVICE: *An unequalled record for durability as the official portable of the Allied Armies.*

POPULARITY: *As many Coronas have been sold as all other portables combined.*

DURABILITY: *Coronas purchased 20 years ago are still giving satisfactory service.*

BEAUTY: *Graceful in line; exquisitely finished in every detail.*

No; wait till I finish!— Not a soul knows about this but Pelkie, you, and myself. I can't get Pelkie on the line to countermand instructions. And I wouldn't dare to if I could, for I mustn't be known in the thing at all. Now, Kit, if you want to win the Gray Wolf Mine, you've got to help me figure out a way to keep Kerry from running onto that blanket. We have about two hours and a half to do it in. Sit down here quick and let's put our wits together. for the Trail Eater's rambling nearer every minute!"

WHILE Kitty and Luce were talking of him, Kerry was plodding along behind his sled, shoving on the handlebars to help his team on an uphill grade of the lonely trail that led to the coast. He crested the hill, and paused to rest. On the opposite ridge a dog team was outlined against the pale, bright sky.

He was creeping up on Slim. A feeling of satisfaction stirred in him as he realized that his carefully planned strategy back at Baker's cabin was bearing fruit. That four hours there had put new life into himself and his dogs. It was the crucial place in the race, too. He had worked carefully over his time sheets, and found that Slim was the only one he need fear. He must make Slim expend more energy at once, make him think that he, Kerry, was on the verge of collapsing. Accordingly, he gave his dogs a light feed when he arrived at Baker's, and after a two-hour rest woke them and gave them another feed, to insure a logy gait from undigested food when he started on again.

Kerry knew he had Slim worried when the Syndicate helper called Murphy on the telephone. After the second ring, which was left unanswered, he had posted Murphy on a hilltop back of the cabin to watch for Slim's coming. Thus it was he had a carefully planned start on his competitor. What a pitiful sight he must have presented when Slim overtook him! He grinned to himself, recalling his own calculated listlessness, his curses so modulated that his own dogs would think he was talking to them! He had been afraid Slim's sharp eyes would detect the tightened moccasin-strings which had made the food-heavy pups limp; but the Syndicate driver had been too anxious to pass him. He had been so elated he had taken the next hill on the run!

That suited Kerry. He wanted him to take all the hills on the run! He wanted him to use up every bit of his energy before he got to Safety, so he'd have none left for the last twenty-two miles into Nome—the miles that meant victory, or defeat! Kerry was enough of a psychologist to know that now when he passed Slim the spirit would go out of him like air out of a pricked balloon. And it was the spirit that counted on those last vital miles.

Thinking thus on his hilltop, he adjusted Tokon's snow-glasses and the green veiling on the eyes of the other dogs. He couldn't afford to have any of them going snow-blind on him. He gave the word to be off, and rode his brake down the long grade. When he reached the level again, a wave of utter exhaustion swept him. Though he tried to fight it off, it made his legs weave under him like a drunken man's. He gritted his teeth and clung swaying to the handlebars.

He was nearing Solomon now. He must hitch Tokon to the towline again. Tokon! What a dog! Way back on the trail he had tied the husky into his sleeping bag, thinking to carry him and conserve his energy for the last miles into Nome. But Tokon, snarling and indignant, had ripped his way out and rushed to the head of his *team, leading loose!* Tired as he was, Kerry thrilled as he recalled it.

There was Solomon ahead of him. Only thirty-six miles to go now!

He was passing through the little town. An excited handful of people were shouting information at him as he went. "Slim went through half an hour ago." . . . "Hinkey's at Timber!" . . . "Gene Christy's got a rope around his waist hauling his dogs through a ground blizzard in Death Valley." . . . "Jake quit at Fifty-mile. Couldn't get his pups on their feet."

Kerry went on, thinking about these things. Poor old Jake, done in by Luce Barton! And Gene! It took grit to keep coming like that when you knew you were beaten! Slim—about three miles ahead of him!

He passed Port Safety. Only twenty-two miles to go! Far ahead he caught a glimpse of Slim. No, it was a dog team coming toward him, and it was coming at racing speed. The driver was frantically waving his hand. He knew the man was shouting too, but he couldn't make out what he said. Wondering at the other's haste, he urged his own dogs to a quicker pace. The approaching driver—he looked like a boy now—suddenly unwound his whip and began cracking it over the backs of his malamutes. Then Kerry realized that the driver was a woman.

"Mush, Tokon! Pick 'em up, boy! Pick 'em up!"

His team dashed forward.

BACK in the room above the Golden Sands, Kitty and Luce had put their heads together with swift results. Since it was impossible to reach Pelkie, they'd have to let him put the blanket out and disappear, according to first instructions. This would keep him from knowing Luce's change of plans, and protect the lawyer. The next step was to get someone vitally interested in Kerry's winning. Tolovana Belle! She had a bunch of money on Kerry, and he was using her dogs. Kitty would tell her about the blanket, concealing the source of her information.

"Tolovana'll know who to send to yank up that blanket. She may go herself. There are some dogs left at the Kashim. But no—they're not fast enough to make Safety in time. I have it—the mail team! I wonder if she can drive the mail team?"

"If she can't, Barbee Neilan can."

Luce's face cleared. "Better than ever! That's the stuff, Kitty. But *you* can't go to Barbee—after you've been playing fast and loose with Rance. You leave that to Tolovana. Tell her you have money up on Kerry, and have her induce Barbee to telephone from Safety after she gets the blanket. Then I'll take up Rance's bet. And if you do your part—"

"Leave it to me!" said Kitty, starting for the door. "Tolovana's in the women's betting-parlor right now. She'll have Barbee off in half an hour!"

Barbee swayed behind the handlebars of the mail sled skimming down the coast toward Safety. Her violet eyes glowed beneath the frost-encrusted hair that escaped from her cap. She was driving faster than she had ever driven before. She was thrilling to the motion, and at the same time burning with indignation as she thought of what had launched her on this journey.

She was hazy as to details—there had been no time for questioning when Tolovana rushed in on her. But Barbee had learned enough—a band of gambling squawmen betting against Kerry—a porcupine quill-blanket put out one mile this side of Safety! As if poor Kerry hadn't enough bad luck to contend with without this crookedness! But she'd get there in time. She had a fresh team against his tired one. He'd be perhaps forty miles from Nome now—nineteen miles from the blanket.

She speeded up her team.

A CLUSTER of snow-covered Eskimo igloos came in view—Cape Nome! She had covered fifteen miles. . . . The Seventeen-mile House showed a moment and slipped behind. . . . The trail swung from the sea ice to the tundra. She rounded the bend. Coming toward her was a team with a driver who kept looking back over his shoulder. His dogs wobbled along, heads swinging low. After every backward look the driver yelled. . . . He was cursing. She recognized the gee and haw leaders at the head of the line—it was Slim! Slim in the lead, but fearful of someone behind him. Someone whom Barbee could not see.

She swung her dogs and ran up to hold her leader while the malamutes went by. She had a passing glimpse of Slim's haggard, bearded face, his sunken eyes glazed with exhaustion. In Barbee the savage thrill of competition melted into pity for the nerve-racked, weary man. He glanced at her with unrecognizing eyes—Slim, the dashing dare-devil of the Trail, who had talked so nonchalantly with her only five days ago! Would the Trail do this to Kerry?

She woke again to Kerry's danger. Now the blanket was down!

She dashed on and swung around a curve. Far ahead a dog team was approaching. It must be Kerry. He could not have crossed the blanket! Perhaps, after all, it had not been put out. Perhaps Tolovana had been misinformed. Then, in a flash, she knew—*the blanket lay somewhere on that quarter-mile stretch between her and Kerry!*

She shouted to her dogs. She must go faster! Faster! She must reach it first!

Frantic with anxiety, she tried to wave Kerry back. She cupped her hands about her mouth and yelled to him.

He kept coming. Tokon, frost-covered, dripping-tongued, resolute, was eating up that distance between them.

She jerked the rawhide whip from about her waist and, balancing recklessly on the speeding runners, sent it stinging over the backs of her dogs. Her sled leaped. Then —a sudden yelp of pain and her leader went down. Malamutes and sled piled up on him. Barbee pitched sideways, clutched air, and measured her length in the snow.

When she picked herself up, five of her dogs were whining and pulling porcupine quills from their feet.

She sprang forward and began kicking snow. Her small, mukluked feet found it

This soft deceptive Food

HERE are fads and fashions in foods as well as in gowns, and the present eration is committed by custom and mode, to serving soft, delicious meals vithout fibre, without roughage!

Vhich is precisely why the American ion, the most advanced in dental science, the greatest burden of gum troubles to :

or the human gum needs exercise! Deed of it by the fare of modern civiliza-, gums grow weak and unsound. And n become affected.

tch out for "Pink Tooth Brush!"

ver your tooth brush "shows pink" t down as a warning that somewhere on your gum wall a soft spot has come. Unchecked, this tender spot may lead to serious trouble—gingivitis or pyorrhea.

Get after "pink tooth brush" with Ipana and massage. Gently massage your gums twice daily, with your brush or with your fingers. Speed the flow of blood to the tiny cells of the gums—wastes are swept away promptly—depleted tissues are restored—and healthy gums are yours!

Ipana Tooth Paste has a special virtue that gives it power to tone the gums: it contains ziratol — an antiseptic and hemostatic widely used by the dental profession. Thousands of dentists recommend Ipana and massage not only for the beauty that it brings to teeth, but for the health it gives to gums.

Give Ipana a full month's test!

We will gladly send you a ten day sample of Ipana, if you will mail the coupon. Even the small sample will show you that Ipana has a delicious taste, and that it keeps the teeth clean and sparkling!

But to demonstrate all of Ipana's good effects in oral health, a longer test is needed. Buy a full-size tube (enough for 100 brushings) from your druggist. Start to use it tonight. Use it for at least one month. You will be amazed how clean your mouth will feel, how white will be your teeth . . . how healthy your gums.

© 1929

It is harming your gums, endangering your teeth .. protect them both with

IPANA Tooth Paste

BRISTOL-MYERS CO., Dept. J-59
73 West Street, New York, N. Y.

Kindly send me a trial tube of IPANA TOOTH PASTE. Enclosed is a two-cent stamp to cover partly the cost of packing and mailing.

—the diabolic contrivance that would have put Kerry's leader and at least two other dogs out of the race. It was a strip of white flannel with quills thrust through it and backed with roofing paper. She tugged at it, dragged it to one side, and had her team off the trail when Kerry, staring with astonishment, stopped beside her.

"Oh, don't wait! Go on! Please go on!" She was patting him on the shoulders, urging him forward, even while her heart contracted at the sight of him: Shadows under weary blue eyes, hollow cheeks dark with stubble, lean young face crucified by fatigue. So this was the way men finished a race—Kerry and Slim! And the dogs? All of them heaving flat on the snow, frost-rimmed eyes closed, breath rasping in their throats.

Where was the glory of the Sweepstakes Trail?

BUT time was flying. She took hold of him and tried to shove him along. "Oh, don't waste time, Kerry! Can't you see what they tried to do to you? Go on! Go on!"

He glanced at the blanket; at her dogs pulling quills from their feet. Comprehension, anger, moved across his face. But when he turned to look down at her, the expression in his eyes made her catch her breath. His hands went to her shoulders. "You came out to warn me? You did this for *me*, Barbee?"

"Yes, yes! But don't stop now—"

"What about you, Barbee? How—"

"I've got enough dogs. I'll get to Safety and— Oh, go, Kerry! Please, please. . . ."

"All right . . . darling!" He caught her suddenly in his arms and kissed her. "*Darling!* . . . Now watch me!" he called exultantly as he swung to the handlebars.

He was off on the wings of this incredibly wonderful thing that had happened to him. Oh, vivid little Barbee, with her mouth like a berry and her violet eyes so anxious beneath her frosted black hair! Barbee, so small, so feminine, yet so sturdily gallant! Barbee, doing this for him! New life coursed through every atom of his being. His dogs responded to the renewed vigor of his voice. Drooping tails came up. Feet, that left crimson stains on the snow, beat a livelier tattoo.

When he had left the Seventeen-mile House behind him, the trail swung out among the ice ridges of the Bering. On the left its crystal palisades raked up against a red sunset.

On around a bend to a long, straight stretch. A quarter of a mile ahead was Slim. Five of his dogs were trailing loose.

At the sight of their rivals Kerry's racers quickened. He crouched across the handlebars, yelling, "Pick 'em up, babies! Pick 'em up, fellas! One more spurt now and we'll—" The sled struck a pressure ridge. Something cracked. The stanchion—had it split?

He leaned over to look. The speeding sled swung toward a Trail stake. Too late he tried to jerk himself upright. A stunning blow on the temple swept him to the snow. He lay still and his unguided team dashed on.

Tokon ran, a pointed ear cocked first on one side, then on the other, listening for the voice that now ruled his world. . . . Silence. . . . He looked back over his shoulder. His pace slackened. He came to a hesitating halt. Every dog behind him flopped in the trail, panting. But the tawny husky turned and, throwing up his ice-coated muzzle, sniffed the wind. A yelp of satisfaction escaped him. He woofed and lunged against his collar to start his team.

Not a dog moved.

He whirled at the end of his long hitching line and, with a "*grrrrrrrr*" in his throat, stepped stiffly toward them, narrow head low, lips writhing, ears flat above gleaming slit eyes. Both authority and a deadly menace were in his manner. They wobbled up, yipping, and with impotent sneers sidled from him.

When he started again, every dog followed; and the husky, guided only by his own strange intelligence, swung his team and started back toward the dark object on the snow that was his master. . . .

Kerry felt something warm and damp on his face. Something pawing at his chest . . . something nuzzling him, whimpering in his ear. He opened his eyes. A whitened furry mass swam above him, and faded again when his heavy lids closed. . . . Duna, of course, trying to wake him in the morning. . . . "Gowan, old man. Wanna sleep. . . . Go on. . . ."

Something was hurting the side of his head. "Le' me 'lone, Duna! . . . *Ouch!*" The pain stabbed him into sudden consciousness. His head cleared a little. He could see now—it was Tokon's tawny body over him. "Oh, hello, fella! What's the matter?"

The husky wagged his tail and dropped beside him. Kerry sat up, bewildered. Everything was whirling. He pulled off his mitten and rubbed snow on his face. The white whirl steadied down . . . flattened. He was sitting in the trail, with his dogs crouching near.

He pressed both hands against his throbbing temples. The fur on one side of his parka hood was stiff. He slipped his hand beneath his thick cap, and winced at his own careful touch. His fingers came away sticky. He remembered then—he had hit his head on a Trail stake.

He looked about him anxiously. Slim was out of sight.

He started up; but his head swam with such agony that he had to clutch the loose skin on Tokon's neck to draw himself to his feet. Hanging to one dog after another, he lurched toward his handlebars; grasped them and clung there, while his feet fumbled and found the runners.

HOW much time had he lost? Not much, for the flame of the sunset still burned behind the hummocks. But the pain in his head turned him sick; doubled him over his handlebars. He couldn't go on.

As he swayed, his dull eyes focused on Tokon licking his ice-cut paws. Something about that made him remember Barbee's dogs pulling quills from their feet—quills meant for his team. Barbee—racing out to save him! He forced himself to stand up. His team was lying on the snow awaiting his word—his team that was turned round. There wasn't a human being in sight. Tokon himself must have swung that team and come back to find him! Tokon! And Barbee! A girl and a dog doing things like that for him, and he wanting to lie down and quit!

He cursed himself. He'd die before he'd quit.

Swinging his leader about, he started off toward Nome.

Gradually, as the keen air broke against his face, he began to feel better. Then Slim came in sight, and, still farther up the coast, the igloos of Cape Nome. After that—only fifteen miles to go. But he must pass Slim . . . pass Slim.

The red had all gone from the sky now. As he neared the Cape, lights danced across the dim drifts and he could see shadowy forms of Eskimos with lanterns running and lining up along the course to watch him go by. Soon he was abreast of them. They were shouting, laughing, clapping their mittened hands. Their teeth gleamed in their jolly, dark faces.

"*Nagurruk*! Good! *Nagurruk*, Kerrie! You catchum Slim—he plenty tired!" He went on with the kindly cheering of the natives in his ears.

THERE was Slim ahead in the gray dusk. Just beyond him was a long, narrow lagoon. The trail ran straight down the middle of it. He must go by Slim on that wide stretch, for at the end of it the trail ran for miles between towering hummocks too close together to permit one team to pass another. If he didn't reach it first, the race was lost to him. Slim could keep him at heel so long that he could never make up that fifteen minutes he needed to win the victory after he had overhauled the Syndicate driver.

The same thought must have occurred to Slim. He was trying to speed up his malamutes.

"Mush, Tokon! We've got to catch him, fellas! Eat 'em up! Eat 'em up!" Kerry's weary dogs responded gallantly. . . . Details of Slim's outfit grew clearer. He was unwinding the whip from his waist. He was swinging it across the backs of his malamutes.

"Tokon, we've got him! When Slim Carvey begins driving with leather, we've got him, boy!"

When Kerry hit the lagoon Slim was nearly halfway across it. The leaders of both teams knew they were nearing the climax of that grueling, four-hundred-mile race. There was a deadly earnestness in their gasping tugs. But the lightness of Kerry's sled was telling. The distance between them shortened. A hundred feet to go! . . . Seventy-five! . . . Fifty feet!

Slim, half out of his head, staggered to the side of his straining dogs, lashing at them. Tokon, flat-eared, resolute, was moving up . . . he was even with Slim's two malamute leaders—neck and neck with them.

Slim's curses and the crack of his whip mingled with Kerry's shouts: "One more spurt, Tokon! Just one, old man! You can do it! Pass 'em, boy! You can do it!"

Tokon was pulling all spread out—hauling the whole team. He was inching forward! One foot! . . . Two! . . . He was clear!

Kerry was passing Slim's snarling malamute leaders!

Kerry was plunging first into the narrow trail between the hummocks!

"Tokon . . . good old boy!" he called chokingly, and dashed the moisture from his eyes.

He looked back. Slim, his spirit gone, had collapsed, face down, on his sled.

THIS MAN—*helps those who want to build homes*

HAVE that home of your own without waiting for a bank balance big enough to fit your dreams.

Pay for the property just as you now meet the monthly rent bill. That is the *modern* way to independence.

Right in your own community there is a man who has helped hundreds of responsible, ambitious families out of the renters' rut. This man is the dependable dealer who displays the keystone symbol, "Build Now With Safety." Go and have a talk with this dealer. He will explain the soundest methods of financing; recommend responsible contractors, and guide you in every important step.

Merchants who feature the "Build Now With Safety" keystone are pledged to lend you a helping hand on the road to Independence.

Build now with safety

National Retail Lumber Dealers Ass'n,
326 W. Madison St.,

Fourteen miles to go. Now, if he could only drive himself to finish, the race was his. But the last, desperate spurt had taken all the life out of his dogs. Kerry, too, lurched and swayed. His voice was a croak, every muscle in his body jumped with pain, his head throbbed as if it would burst. Yet he must keep going; must keep his brain functioning; must hold his team together.

Silence . . . pain . . . cold . . . stars. Furry backs bobbing along the lonely trail. Ice-battered paws leaving red stains on the snow. Dogs slowing up again.

Cultas and Tong pulled to one side. They were quitting. Tokon was snarling, bellying low, straining against his collar. He was necking them on! The strength, the sheer grit, the courage, wrapped up in that tawny, frost-whitened hide! Kerry's cracked lips tried to form words of cheer. Instead, he cried impotent tears that did not come from his eyes but dripped inwardly into his throat.

On the gray blur of his mind, impressions: Dim hummocks moving by in the dusk. Far up the Trail great bonfires of driftwood gleaming on the ice; shadows of dog teams, reindeer teams, and men moving against the smoke and flames—impatient ones come out to meet the racers.

He was passing them: Men rushing at him offering steaming cups of coffee, sandwiches. He waved them away. Wasn't hungry now. . . . Men running along with him trying to talk to him. Talking about Tokon, with his towline taut as a fiddlestring, hauling the whole team home. . . .

The lights of the Fort. "*Bang! . . . Bang! . . . Bang!*" Cannon saluting the winner. Three miles to go—the three longest miles ever known. A timeless space when he wasn't conscious of anything. Then—high ahead, the intermittent flash of an electric cross, roof lines jumbled dark against a silver glow. Nome! The lights of Nome! . . .

Whistles blowing! Sirens screeching! Guns going off! And everywhere rockets soaring and bursting into showers of gold against the sky! On the ice the dense crowd waiting. The soaring acclaim of a thousand voices. Then—the roped lane down the center, and Tokon swinging his trail-worn team straight for the judges' stand!

FOUR hundred arctic miles were ended. Kerry's sled was again on the scratch. Watches clicked his time. His ice-coated dogs dropped exhausted on the snow—all except Tokon. He stood in his taut traces, gaunt body frost-rimmed, hips and hind legs trembling under him. The game, indomitable husky kept his feet—but only because he was bracing himself against his collar.

Kerry tried to go to him; but the band struck up and the yelling, sport-mad crowd closed in. A whiff of perfume, a flash of red hair and ermine fur—and the Queen was tossing a wreath of carnations over his head. She was kissing him. Other women were rushing at him, clinging to him, crying over him. Cheers beat against his ears. He was hoisted to men's shoulders. They were marching uptown to the music of the band. He was swaying above a surging, shouting sea of upturned faces and waving arms. Lights flashed. Stars reeled. They were cheering again. "Hurrah, for Tokon—Tokon of the Broken Tusks! H-u-r-r-a-h!"

They were cheering someone else now. "Kerry Wayne! Kerry Wayne! Kerry Wayne! H-u-r-r-a-h for Kerry—King of the Arctic Trail! H-u-r-r-a-h for the Trail Eater!"

THE kitchen at the Kashim was warmly odorous with smells of spices, roasting meats, pastry. Before the kitchen table spread with ingredients and utensils for cake-making stood Tolovana Belle with her sleeves rolled up, vigorously beating a batter. When the mass suited her, she set the bowl aside and began pawing about on the cupboard shelves.

"H-umm. Just as I thought," she muttered.

She slipped quietly out of the back door and entered the Kashim, where Doorknob was busy cooking a dog banquet for the victorious racers.

"Old scout, you'll have to hitch a pup or two and gallop downtown, because there's not a smidgeon of citron in this place!"

Having dispatched Doorknob on this errand, Tolovana was turning to go back into the kitchen when Barbee Neilan entered the Kashim. She glanced at the closed door that led to Kerry's living quarters.

"Is he still asleep?"

"Yes. But he'll be waking up any time now. Eighteen hours without a break ought to put him on his feet in fine shape."

"But—" The girl hesitated, her worried eyes returning to the closed door. "Are you sure he'll be all right again? He was so desperately fagged when I met him on the Trail I—I—just can't get his face out of my mind."

Tolovana gave her a sharp look, then grinned. "He wouldn't want you to, Barbee," she said. "But have no fear about that boy. He's as strong and resilient as a steel blade. . . . Here, give me your coat. You might as well call up your dad and tell him to come over. I want both of you here for the big feed tonight. Wally is getting in from Candle, and Kerry will be up by that time."

When the girl stood silent, Tolovana swung her so that the light from the window fell on her youthful face. "Look here, Barbee. Are you still troubled about Rance?"

Barbee's violet eyes met hers. "No. Oh, no, Tolovana! I'm quite over that. . . . I'm just sorry for him now."

"Well, what he got he brought on himself. Poor old Lim always said that Luce would have the Gray Wolf some day. The scoundrel'll need every cent it brings him too. For he won't dare show his face in any Alaskan town after what he's done to Rance. As for Kitty—" Tolovana laughed. "I hear she has ordered a sable wrap from the furrier and is getting ready to go to England on the first steamer after the Bering breaks."

"How in the world did Kitty get herself in on that bet with Luce Barton, Tolovana?—that's the mystery which the whole town is wondering about."

Tolovana turned her wise, inscrutable eyes from the girl; but before she could answer, the door of the Kashim burst open and Doorknob came in with excitement written all over him.

"What's happened now?" demanded Tolovana.

"Everything! Girls, Nome's never been in such an uproar since gold was struck!" Doorknob sank on a box, laughing and slapping his knees. "Luce and Rance got together to fix up their affairs this afternoon. The bookmaker, who was with them, says Rance was dead game about turning over his mine to the yellow hound, too. But just after everything was all arranged, the foreman of the Gray Wolf comes in—you know Rance wouldn't talk to him while the race was on, so the fellow got sore and went off on a little toot by himself and didn't sober up until about an hour ago. Well, when the foreman finds that Luce has double-crossed poor old Rance out of the Gray Wolf, he lets out a whoop and begins laughing fit to kill himself. Seems he'd been trying to get Rance to one side for a week to tell him that *the pay streak has pinched out at the Gray Wolf Mine!* Oh, Mama! Mama! I'd have given a hundred dollars to have seen Luce's face then!" Doorknob swayed back and forth, wiping tears from his eyes.

"Then Kitty—"

He silenced Tolovana with a wave of his hand. "Wait! Wait till you hear! Last night, before all this happened, Kitty and Luce got together and started quarreling over their partnership in the mine; and it ended up with Luce buying her interest for one hundred thousand dollars cold cash! She's got it now, and Luce— Oh, Lord! oh, Lord!" Doorknob slapped his knees and went off into another paroxysm of glee.

"Great—icebergs!" exclaimed Tolovana. "Not a brain in her head—"

"But, oh, what an instinct for self-preservation!" finished Barbee, laughing.

"And what about Rance?" queried Tolovana when their mirth had subsided.

"Well, you've got to hand it to Rance! He's sober as a judge today and is already getting an outfit together to go prospecting up on the Chandalar as soon as the snow goes off. He—"

"Hello, folks!"

THE three turned toward the door that led to the living quarters. Kerry was standing there looking in, with his one-sided smile. His thick, dark hair, still damp from his bath, was brushed back from his forehead. His deep-set eyes were very bright and blue in his clean-shaved face. Despite the easy-fitting suit of tweed that he wore, he retained the lean, racing look of the Trail.

He started into the Kashim stiffly, slowly, as if he had difficulty in bending his knees.

"Hello, folks!" he said happily; but his eyes and his smile were only for Barbee.

"Oh, Kerry!" Her face lighted. She ran toward him, holding out her hands.

Tolovana gave one satisfied look and hastily hooked her arm through Doorknob's. "Come on with that citron, man!" she commanded loudly. "Don't you know we have a cake to bake before dinner tonight?"

As she dragged Doorknob willy-nilly toward the kitchen, Kerry was limping swiftly to meet the girl he loved.

Compton's Pictured Encyclopedia

Can any MOTHER afford to be without COMPTON'S any longer?

Literally millions of children now depend on it for leadership and better marks in school. And teachers say you can pick a COMPTON-trained child out of any classroom.

Compton's Is the Only Thing of Its Kind in the World

COMPTON'S is the only complete set of reference works in encyclopedic form that has ever been written for children in terms of their own interest and understanding. A real ten-volume encyclopedia of complete knowledge, absolutely accurate; and yet so intensely interesting in picture and story that children take these books to bed with them as they would old fairy tales.

And my! How they learn! And how they love to learn!

Compton's Now on 1st Payment of Only $3.50

Can you afford to be without COMPTON'S any longer when so many millions of children now have its extra advantages and when a first payment of as little as $3.50 puts it in the hands of your children right away?

Fill in this valuable coupon and mail it now to our Educational Director. It will show you better than all the advertisements we can write how much COMPTON'S can mean to your children every day of their entire school lives

THE FAMILY'S PROBLEMS

It Was a Rich Woman Who Taught Me How to Cut Corners

DID you ever hear a person with money speak lightly of it? Or see one treat it lightly?

No, come to think of it, you never did!

It's a funny thing, but those of us who ought to count every penny are the folks who are ashamed to do so. We like to be thought open-handed, easy spenders. When we shop for bargains, we feel sort of furtive and unworthy. We are ashamed to ask for the cheaper cuts of meat. We are the folks who brag, "Well, I may not have much, but nobody can say I am a tightwad."

Poor boobs! We never stop to think that Jones would not be living in a fine house and riding in a fine car today if Old Man Jones hadn't started paring and saving forty years ago. There's not a rich family in your town in which somebody did not start saving at some time.

If you want to learn to save, watch your friends with money. They are the ones who have worked out the short cuts. They can tell you just where the best values in town can be found. It is they who carry paper napkins to the picnic. It is folks like you and me who expose our best linen to grass stains so that the neighbors may know that we have plenty more at home.

It was the richest woman in our town who taught me my biggest lesson in sensible buying. Three of us had left a club meeting together and had gone into a store to buy some khaki suits for our small sons who were starting off the following day for a two-weeks' camping trip. We found some suits marked at a dollar ninety-eight each. The saleswoman advised us to buy a garment marked at three-fifty, which was guaranteed to be sun-fast and not to shrink in washing.

I TOOK one of the three-fifty suits as a matter of course. So did my neighbor, whose husband makes even less than mine. I looked at my rich friend. "I'll take one of the cheap ones," she said cheerfully. "It can't fade and run much in two weeks, and it will be too small for Tom next summer. The children can't wear these things to school, you know."

She was right, of course.

Brought up on the theory that it always pays to buy the best, it had never occurred to me that there are times when the best is not desirable. The best milk and eggs and the best material in a coat that has to last three seasons, of course. But when an article is wanted to serve a brief or temporary purpose, be guided accordingly.

Not long ago, I was admiring the smart little frocks worn by the small daughter of a wealthy woman. "Of course, you buy them at Y's," I said, mentioning a shop which specializes in apparel for small children. "Oh, no," said the mother frankly, "I make them myself from remnants which I pick up in Blank's basement. They cost absurdly little that way, you know."

I did know that, but I had thought that Blank's customers were above remnants!

One day last February, I dropped in around lunch time at the home of a friend in very modest circumstances. She had fresh asparagus from the Southern market on her table. It happened that while marketing that morning I had been tempted to buy asparagus myself, and had been deterred from doing so by hearing the wife of the man in whose office my husband works tell the grocer quietly that she would wait for the home-grown asparagus.

A FEW weeks ago, my daughter brought her school chum, the daughter of our local merchant prince, home to dinner and to spend the night. In honor of the child's visit, we had a rather elaborate dessert. "We have dessert only twice a week," said the little girl. "We have it every day," boasted my small daughter.

A young neighbor and his wife have no savings account, because, as they gayly explain, there isn't a thing left when they have paid the butcher, the baker, and the gasoline maker. "That isn't the way to save," sharply said an elderly banker who was sitting in on this conversation. "The only way for a salaried man to save is to put aside his savings on the first day of the month, and live on what he has left."

Another young couple I know could not manage to put anything in the bank. They put every penny above actual running expenses into pretty furnishings for their rented home.

But the young husband had a long illness. The pretty rugs and even the silver off the table were sold—at a third to a fourth of the original price—to pay the doctor and the hospital bill. This was five years ago. Today, this young couple save first and spend afterward.

There is something about owning property that increases your self-respect. The young man with a savings account holds his head a little higher, meets people a little more confidently. He knows that he is getting ready to step forward and meet opportunity when it comes his way.

No luxury which threatens their principal is attractive to moneyed people. Young folks should feel that nothing which threatens their savings is worth the price.

Ask your rich friends. They know!

*Guaranteed Forever Against All Defects

What June Graduate could have a better present than such *aid in a class-room,* in business, or at home?

Fingers Merely Guide It

. . . No Pressure Required

And the Parker Pressureless Duofold is Guaranteed Forever Against All Defects

The feather-light weight of the *Duofold itself* provides all the "pressure" required for writing.

Yet the Duofold is 28% lighter than a rubber pen.

No pressure or tension in the fingers means *none in the brain.* Thus the Parker Duofold *clears the track for* THINKING in a remarkable new way.

Another feature is this: The *Pressureless* Duofold, holding 24% *more ink* than average pens, size for size, writes not only easier, but *longer on one filling.*

Geo. S. Parker has made fountain pens for more than 37 years. 47 major improvements are built into the Duofold today. 29 patents on Parker products and processes are represented in this advance. Barrels are *Non-Breakable.* Five flashing colors, in the modern hues, offer wide selection.

One caution: Look for "Geo. S. Parker—DUOFOLD," stamped on every barrel. And get this guarantee:

*To prove Parker Duofold is a pen of lifelong perfection, we offer to make good any defect, provided complete pen is sent by the owner direct to the factory with 10c for return postage and insurance.

This assures you *everlasting* service from the master pen.

The Parker Pen Company, main office Janesville, Wisconsin. Factories at Janesville, Wisconsin; Toronto, Canada; Heidelberg, Germany. Branches or depots at New York, Chicago, San Francisco, Atlanta, Dallas, Buffalo, Milwaukee, Toronto, London, Paris, Heidelberg, Amsterdam, Barcelona, Brussels, Copenhagen, Milan, Cairo, Calcutta, Bombay, Rangoon, Singapore, Batavia, Sydney, Melbourne, Shanghai, Yokohama, Manila, Johannesburg.

Model A
Polished Black Glass Base with one Parker Duofold Pen, $12 *and* $14.

Model OG
Oval Porcelain Base with Parker Pen, $6.50; *with Parker Duofold Pen,* $8.75.

Duofold Pens, $5 *and* $7
Duofold Pencils, $3, $3.50 *and* $4.

MORE THAN 2,200,000 CIRCULATION

The Kind of Poise that Gives You Power

By
M. K. WISEHART

Illustration by
ADOLPH TREIDLER

SEVERAL old-time newspaper men, a well-known editor, and a mechanical engineer fell to discussing the type of human behavior which we commonly fer to as "poise."

"Who are some of the men in history no have had poise to a preëminent de-ee?" was among the first of many ques-ons raised.

"Theodore Roosevelt," quietly re-onded one of the newspaper men, a for-er Washington correspondent, a friend four Presidents, and a veteran of in-merable political campaigns.

"I *wonder*," returned the editor ques-ningly. "*Was* he poised? We usually ink of him first as a man remarkable his great *energy*. He was not always onomical of his amazing powers."

"Nevertheless," insisted the news-per man, "he is an outstanding ex-ple of what *I* mean by poise; one of e supreme examples in all history, as I ink I can show."

ND he went on as follows:

"On the night of October 14, 1912, the height of his stirring campaign as esidential candidate of the Progressive rty, an attempt was made to assassi-te him by the maniac Schrank. I was Milwaukee at the time, had myself t left the Hotel Gilpatrick, and was but a witness to the event.

"On coming from the Gilpatrick that ht after dinner—it was 8:10 P. M.—the lonel crossed the sidewalk and stepped o a waiting automobile. Having seated nself in the rear of the car, an open one, rose in response to persistent cheers m the assembled crowd and lifted his t. At that instant, from a distance of y four or five feet, as was shown by the h, came the vicious crack of a revolver.

"With the firing of that shot, the Colonel's knees bent just a little. His right hand slipped forward on the rear door of the car. Then he staggered back against the upholstered seat. Instantly, he straightened himself.

"'Did he get you, Colonel?' asked Henry F. Cochems, friend and ex-football star, who was standing beside him.

"'He pinked me, Harry,' was the Colonel's answer, in a quiet aside.

"AT THAT moment, mark you, no one but the Colonel and Cochems knew that the bullet had taken effect; nor was anyone else to know until some time later.

"Almost immediately, following the crack of Schrank's revolver, the crowd, composed of the Colonel's enthusiastic adherents (they were densely packed for a block in either direction), went wild with frenzy. As for the Colonel, he had no sooner spoken to Cochems, cautioning him against letting the truth be known, than he turned to the crowd and raised his hat. There was a reassuring smile on his face. He was the least excited of any person there.

"Surging about the car, tearing at the would-be assassin, the mob shrieked, 'Lynch him! Kill him! Lynch him!'

"Above the mob's fury, in a sharp, military tone of command, could be heard the Colonel's voice: 'Don't hurt him! Bring him to me here!'

"As all the world knows, when policemen brought the would-be assassin to the side of the car, the Colonel said to them: 'Officers, take this man in custody! See that no violence is done to him!'

"Thereupon, the Colonel again waved his hand as evidence for the crowd that he was all right. After a brief delay, which

Digitized by Google
Original from
UNIVERSITY OF IOWA

allowed him to see that the officers were in control of the situation, he ordered the car to drive on. And it was only after the machine had turned the corner that others in the car learned what had happened.

"'Why, Colonel!' said MacGrath, his secretary, who was sitting on his left. 'You have a hole in your overcoat! He has shot you!'

"'I know it,' returned the Colonel. Opening his overcoat, he disclosed his white linen shirt, coat, and vest stained with blood.

"As an act of humanity, the Colonel's intervention in behalf of his assailant was something rare and fine. However, it is not what most stands out in my mind. I have never believed that the Colonel's command to the officer was what saved Schrank from lynching. That mob was calmed—misled, outwitted, if you please!—by something else. Sizing up the situation on the instant, instinctively, the Colonel did the *one* thing that could have held the mob in check—making it appear that the bullet had missed.

"That course of conduct was deliberate—*poised!* Unquestionably, the Colonel had in mind at that moment what a frenzied mob might do—the horror that so easily might have ensued. Furthermore, his training, his lifelong efforts for system, method, orderliness in his private and public affairs, asserted themselves. Not for an instant did he think of himself, his peril. His one thought was to control the situation and to bring order out of chaos. In short, I believe that, in the crisis, he acted just as he would have wanted to act had he had time to meditate. As I see it, only a man of the most supreme poise could do a thing like that in the face of the nasty drive of a .38 caliber bullet.

"That bullet, as you may recall, went through his heavy overcoat, undercoat, vest, shirt, steel spectacle case, manuscript, and suspender buckle, and struck a rib and glanced, stopping in the wall of his chest so close to the heart that his doctors never dared probe for it."

"I'LL agree!" exclaimed the editor. "If we had nothing else to go on but the Colonel's behavior on this occasion, it would prove that he was a man, not only of poise, but of amazing power! If we go deep enough into the subject, I believe we shall find that poise and power are one and the same. What other men in history have possessed poise to a preëminent degree?"

"Abraham Lincoln," answered one man readily.

"Benjamin Franklin," observed another.

"And what women would you say belong in this same class?"

"Florence Nightingale," suggested one.

"Jane Addams," came from another.

"Just what *is* it about the conduct of these men and women that makes us say that they are notable for poise?"

"I think I can answer for Lincoln," said the man who had mentioned his name. "He was kind. He was unsurpassed in patience. He was not given to panics, by which I mean those sudden outbursts of temper that are inevitably followed by the necessity of pulling oneself together in order to repair the damage done. Moreover, Lincoln seemed not to mind at all that he was homely, ungainly, and the butt of ridicule. Nor was he ever influenced, in any connection, by the pettiness of personal pride. In short, he was *sure of himself in every way.*"

Numerous other instances having been cited from history to illustrate poise, an attempt was made to frame a suitable definition of it. All the definitions proposed, however, were rejected by common consent as unsatisfactory and inadequate.

"To my mind," said the editor, "a definition should indicate just how poise manifests itself in our everyday life; and it should open the way for answers to such questions as these: 'Why do some people have it to a notable degree while others have it little or not at all? Is it born in a man, or is it something that can be acquired? If so, how?'"

THE questions then raised, and many that subsequently occurred to me, I took to a man eminently qualified, by training and experience, to answer them—Dr. Harry Allen Overstreet. A distinguished educator, a man of the broadest and most idealistic sympathies, noted as scholar, author, and lecturer, he is head of the Department of Philosophy of the College of the City of New York.

"Will you permit me to start rather simply?" asked Doctor Overstreet, in response to one of my queries. "Poise has to do not only with the behavior of exceptional men under exceptional circumstances. It has equally to do with the behavior of *ordinary* men under *ordinary* circumstances. Questions bearing upon the latter phase of the problem are the ones which I think we should consider first.

"Ask the average man what he means by poise and his answer, I believe, will be something like this: 'The man of poise is one who is equal to any occasion in any society; he is able to talk with the President of the United States as easily as he talks with old-time acquaintances. He is not easily vexed, nor does he fly off the handle over trifles. *In meeting emergencies he is able to act as he would want to act if conditions were normal.*'

"Now, as far as it goes, that is a very good statement of the matter. Nevertheless, as I see it, poise means much more than that; something broader, deeper, more subtle, and more profound. But before I explain exactly what poise means to me, perhaps I had better refer to a specific case which came to my attention some two years ago.

"AT THAT time a real estate operator interested in the construction and sale of coöperative apartment houses brought to my attention certain matters having to do with the conduct of one of his employees—let's call her Miss F——. Miss F—— was around thirty-five years of age and her job was to deal with prospective purchasers. For one in her position the essential thing was an easy manner in meeting people, together with the ability to maintain an atmosphere of friendliness under all circumstances.

"Ordinarily, I was informed, Miss F—, when talking with people whom she knew, spoke in a calm, rather pleasing voice, but when meeting strangers, and particularly prospective purchasers, her voice took on a peculiar shrillness which jarred and sometimes antagonized them. Also, when negotiations were not proceeding favorably, her manner became somewhat aggressive. For this reason, Miss F—, as well as her employer, had come to realize that she was not succeeding in her work as she might otherwise have done.

"In view of the information furnished me in this preliminary way, I realized that she was one of that large class of individuals lacking in poise, and I suspected that the trouble was deep-seated and fundamental. Presently, I shall be able to make clear the exact nature of the difficulty at the bottom of this case, but first I think you will want to know why it was that I classified her as a person lacking in poise.

"Technically, poise has to do with the condition of one's personality *taken as a whole*. It means a state of complete inner and outer harmony, harmony between ourselves and the things we value most in life. But, figuratively, poise is to be compared with the art of the trained dancer who moves from attitude to attitude with flawless grace.

"Why is it that the dancer can execute movement after movement and attitude after attitude with smooth-flowing, un-

"Go and Get a Mastery!"

"IF YOU have a sense of inadequacy caused by lack of training, the thing to do," says Doctor Overstreet, "is to *go and get a mastery!* Not in the sense of domination over one's fellows, but in the sense of triumph that comes from thorough knowledge of some subject, a trade, a profession, a hobby, a job—and do not care particularly in what direction, to begin with, you put forth your efforts. Master the mechanics, the handling and repair, of an automobile, or become a master in making radio sets, if that is what appeals to you. Take up American history, European history, biography, some phase of art, collecting—or what you will. As you really master any of these things, your attention will be turned from yourself, you will become absorbed in what you are doing, and so be on your way to poise—and power."

Dr. Harry Allen Overstreet

rrupted skill? It is not only because knows what is required of her at any icular moment, but because, by train- practice, experience, she knows *what ming*. The same is true of the man of e. He is master of the present *because ows what is coming and is ready for it.* Moreover, we invariably find that the of poise is a man *with a purpose*. It is purpose which unifies, coördinates, *rates* his personality, as we say, con- iting to that harmony which makes what he is. So absorbed is he in his ose that everything that happens to elf is inconsequential by comparison his great objective. For him this absorption softens the blows of life, enabling him to meet life's great major tragedies, as well as the knocks and pricks, the minor irritations of every day, with a calm and poise that would mystify us if we did not know to what it was due.

"*Above all, I should say that the man of poise is truly the man of power. In his own sphere, whatever that may be, whether he is a garage mechanic, carpenter, politician, merchant, or industrial magnate, he is inevitably recognized as such by his friends and associates. For this harmony of character of which I speak is the very essence of what we call personal power. Where harmony of character is lacking, there can be no poise. Where there is no poise, there can be no power.*"

"Is this harmony of character—this poise that is power—something that can be acquired?" I asked.

"That is a question which should be answered specifically and in detail," returned Doctor Overstreet. "To begin with, for the sake of clarity, let me put what I have just said in a somewhat different way.

"When we analyze what it is that constitutes poise, we find that, in the main, there are four *positive* factors, or elements, which contribute to it and four *negative* factors which (*Continued on page 114*)

Can you guess the three reasons why women, as a rule, do not make good spies?

"Here, technical expert, use this on yourself," said Fräulein, handing him a pistol

Eves-Dropping

The adventures of women spies in the World War—How they worked, why many of them failed, and the story of three who were brilliantly successful

By THOMAS M. JOHNSON

Illustrated by MARSHALL FRANTZ

"WOMEN do not make good spies—though married men may not believe it." So Sir Basil Thomson, Scotland Yard's chief spy-chaser, taught British Intelligence Officers during the war.

Yet the British had some very clever women spies, and one of the most successful American secret agents was a woman. So was one of the most unsuccessful! A real woman super-spy worked for the Germans. So it went. The game was uncertain.

Women spies! Romantic creatures! Beautiful, of course, even seductive, yet keen-witted, using feminine charm to lure secrets from the unsuspecting male, feminine intuition to escape his clumsy attempts at capture. The words suggest a sinister mask of black silk, soft and delicately perfumed, emblem of who knows what intrigues. And sometimes it was like that, sometimes women spies did play a great and a romantic rôle in the vast conflict of nations. To make a man talk, European secret service often "put a woman on him." Frequently she would get information, but sometimes it was misinformation. Few of the women who went from the United States to France, for instance, to do American secret work, knew armies as did Europeans. They found it hard to get soldier talk straight.

Women spies are a gamble. That may make them the more fascinating. But secret service chiefs agree that they have three drawbacks: Their reports, especially on military matters, tend to be inaccurate and exaggerated; they wear out quickly with fatigue and nervous strain, or, on the other hand, rebel at spells of monotony that are an unsuspectedly large part of spy work; and last and worst of all, they fall in love. Often, they fall in

ove with the very men they have been "put on"—whereupon they become worse han valueless.

Of three outstanding American women pies, two, and they of breeding and refinement, failed ultimately.

How many ex-doughboys know now, nore than ten years afterward, that some wenty-five women did in Europe, partly n France, American secret work of one ort or another? A very few became actual pies, American women spies, and went nto enemy country—with results ranging rom sublime almost to ridiculous. Of heir select company was the lady mentioned already as one of our most successul agents. She was truly a lady, which nade her success greater, her adventures nore surprising.

SHE appeared at the Paris Peace Conference as a newspaper correspondent. ike most American correspondents, she leaned news at the Crillon, American headquarters, or at headquarters of others the thousand and one races congregated Paris after the Armistice. Betweenhiles, she frequented the press room, here American correspondents gathered pass about "the low-down" of the eace Conference that for one reason or nother they could not write. One day e told them she was going to the Ameri-n bridgehead zone on the Rhine, at oblenz, and they saw her no more.

Not strange, for she had gone to erlin. Coblenz had been only a way ation, where Intelligence officers of the my of Occupation could show her how get through the lines. That took naging, since beyond the American tposts and the neutral area were German Republican troops, and no one in the occupied Rhineland was especially endly toward Allied armies who, as nquerors, dominated their sacred river. In Berlin, danger was greater. In ing, 1919, there was Armistice, but no ace, especially in the capital of the new d precarious German republic. Factions l struggled. There was fear of the iser's return or, perhaps worse, of a Red revolution to unite with Soviet Russia. Thousands of Spartakists, with hidden arms, seemed awaiting only the word. There was bloody street fighting.

Passions ran high in Berlin then, and Allied missions walked circumspectly, never knowing what some fanatic might do. Nobody wanted to start the war again, but anybody might. A great place for a spy to work, but dangerous.

In Berlin alone, of course, were the answers to some big questions that President Wilson was asking himself. How strong is the new German Government? Is there real danger of Germany's going Bolshevik? Do they need food as badly as they say? If we ask them to sign a stiff peace treaty, will they refuse? And then what? If we tried to occupy Berlin, would they fight? Could they? Answers to many of those questions were recorded in the woman journalist's notebook and got to President Wilson. Every secret service officer who saw those reports enthused over them.

She heard of a plot to bring back the Kaiser from Holland. She sent information that helped another clever American agent, a man, to get the plans of reorganization of the German Army. She warned that the German Peace Commission headed by Brockdorff-Rantzau would probably fight hard against whatever treaty the Allies presented.

Enraged at what they called its arbitrary tone and oppressive demands, certain German commissioners had returned to Berlin to talk the treaty over with the Republic's leaders. One voice after another cried that the Germans would not sign the treaty. If the Allies forced the new government too far, it would turn the country over to the Bolsheviks rather than agree to such humiliating terms. From Berlin the word reached President Wilson that some of the German leaders believed if the pinch came he would stand with them, rather than with Lloyd George and Clemenceau and the rest, who had forced much upon him. That night our troops on the Rhine prepared for an immediate advance into unoccupied Germany.

All next day, and some days afterward, our troops, guns and supplies streamed over the boat bridge at Coblenz, to show that there was an American mailed fist. The rest is history. An American woman helped make it.

OF ALL women spies of the World War, the most poignant resembled in some respects that American woman. Like her, Louise de Bettignies, a French woman, was a patriot spy, not a mercenary; like her, she was of good, even of noble family; like her, she did her secret work without demeaning herself, without trading upon her sex. She won respect of friend and foe. Long brilliantly successful, she shone through the murky secret war, almost a Jeanne d'Arc. Yet at last, being not divine but human, and a woman, gently reared, sensitive, she failed—and died, in prison.

But her soul marched on. After the victory she had helped to win, French and British gave her great military funerals. They laid treasured decorations upon the casket, citations for "displaying a heroism

With expert fingers she searched the American, and with a little cry found a long, narrow envelope

which has rarely been surpassed." More recently the Echo de Paris started a fund to erect a statue of her, and the United Veterans' Associations of France and Britain fêted in London her chief aide in many adventures, Mlle. Marie-Léonie Vanhoutte, of Roubaix.

These two women, Louise de Bettignies especially, were the leading spirits of a heroic group of French and Belgian men and women who for nearly two years after the German invasion of August, 1914, always in danger of their lives, furnished information of the very highest importance to the British Army. The British regarded her not alone as one of their best agents, but as a courageous, patriotic Frenchwoman. Since her death Louise has even become a rather legendary character, credited with some of the exploits of her devoted companion, Léonie, or others of their group.

THE German invasion found her, aged thirty-four, in Lille, whence she fled as refugee to England and there fell in with the British secret service. They saw at once her qualifications and proposed that she return to Lille as spy.

Her decision showed the courage and will behind the attractive face crowned by luxuriant dark hair. She had hoped to live with her mother, safe behind the British lines. Aside from risk of capture and death, she was not the woman to return willingly to a country filled with enemy soldiers. But she consulted her mother and a priest, then, it is said, the British Commander himself, Sir John French. A few days later, she had made the hazardous trip through Holland and Belgium, through cordons of German guards, and was back at home in Lille, but not as Louise de Bettignies. Alice Dubois was the *nom de guerre* under which she was to fight the oppressors of her beloved *Patrie*.

With her own keen mind and admirable sang-froid, aided by British advice and money, she recruited her secret band for the war to be waged amid the German Army just behind the front. Soon, not in Lille alone, but all the way back to Holland, she had spread nets that caught the precious information for which she risked her life.

Dressed in worn garments of the lower class, as seller of cheese or old lace, she moved from one refuge to another as in a game of checkers. One such place was in the frontier village of Estampuis, six yards from the borderline. If she was stopped, she showed false identity cards and passports which a chemist had made so cleverly that the Germans never suspected them.

On the frontier between France and Belgium, Marie-Léonie Vanhoutte had already played a part before she met Louise and became "Charlotte," her right hand. Roubaix, where Léonie was a dressmaker, was just across the line from Estampuis, and she knew every nook and corner, every trick to slip past a German sentry. She had smuggled her brother, two Belgians, and an Englishman to safety, hidden in two wagonloads of straw. All four men joined Allied armies. Two were killed in battle. Léonie is said to have made twenty such trips.

The Belgian-Dutch frontier, last obstacle before safety, was a gantlet to run, protected by barbed wire, electric cables, and searchlights, besides many German sentries. Allied spies bearing reports must run that gantlet, and none were more clever than "Alice" and "Charlotte." Barbed wire they cut, deadly charged cables they got over with rubber gloves and shoes and insulated ladders, or under by passages dug beneath. "Alice" is said even to have walked right into the searchlight beams, in light clothes, believing herself less conspicuous. She escaped land mines planted to blow to atoms those trying to run the gantlet.

Almost anything seemed possible to Alice. The short, rather slight young Frenchwoman, with her magnetic smile, brought often to Folkestone information of great value. She told where German batteries were about Lille, so accurately that British guns shelled them to pieces. She told where were big German ammunition dumps, which British bombing airplanes blew up. She reported so accurately how many trains of German wounded passed nightly through Lille, and how large they were, that the British could estimate enemy losses to a nicety.

She and Charlotte had many real adventures, to which legend has added many more. Their life became harder. With loyal Belgians in their midst fighting them secretly, the German invaders built up a counter-espionage service so hated that its leaders were marked for death by the Belgians and fled the country at the Armistice. They were former German examining magistrates, detectives, police matrons, who often dealt with patriotic Belgians as they had handled German criminals. They were aided by Belgian criminals who thus bought their release, and sometimes by Belgians of good family, like the betrayer of Miss Cavell, seeking preferment under the Germans.

To outwit such cunning took all the wiles generally attributed to women spies. Alice and Charlotte were repeatedly stopped and expertly searched. Once when false papers and prepared story didn't go with their inquisitors, crude bribery did. But for the more dangerous German spy-chasers, the two women evolved such ruses as hiding reports in a bar of chocolate which they ate as they were searched, even offering the searcher a bite, or in the candle of a lantern, or in a ball of black yarn thrown at night into the bushes and found later by means of a single strand. Charlotte carried an important message written in invisible ink inside a rosary case. Once Alice prepared a minute map of the German arrangements about Lille, which went through pasted on the lense of an eyeglass! An expert penman had done it on translucent paper, with microscopic pen and invisible ink. Children carried messages for them, escaping entirely unsuspected.

DID such success turn Alice's head? Perhaps it was the effect of the life of constant strain, physical and nervous, upon one of her high-strung, sensitive temperament. She became daring to the point of bravado. She carried reports openly in her hand bag, sometimes mixed with a half-dozen manufactured passes in as many different names. Sometimes she went without any pass. She dared the Germans to catch her.

"Oh, they are so stupid!" she said to Charlotte after she had outwitted them once more. But they were not so stupid as she thought. Even then they were watching her and Charlotte. First they arrested Charlotte in Roubaix, then Alice, at a border station which she tried to get by without her own pass. In her hand bag they found passes for several other people.

Unaided by Belgian or French lawyers, the two Frenchwomen defended themselves gallantly, denied everything, and each asked that the other be let off. The sentence was death, but it was commuted to life imprisonment for Alice and fifteen years for Charlotte. The Germans hardly realized that the two were no ordinary spies, but heads of an important espionage ring. Perhaps, too, they recalled their tactical error in the Cavell case.

In prison in Cologne, Alice was again the old Alice who for nearly two years had defied the German Army. She persuaded other prisoners to refuse to work on munitions to kill their compatriots. First pneumonia, then an abscess, wore her down. The Germans refused to let her go to Switzerland, and she died after a prison operation, September 27, 1918, only forty-six days before the ending of the war throughout which she had fought gallantly for her country and its Allies.

THE last of the trio of women super-spies ended her career neither in prison nor in the grave. So far as this writer knows, she was a success from start to finish. She was a born spy, swayed by passion for it that seemed almost berserk. She was a Norwegian, who worked for the Germans, and her name sounded German. But she was commonly called Fräulein Doktor by her obedient if not always devoted pupils in the big spy school of Antwerp.

A fascinating person, the Fräulein. An officer of the American secret service wrote of her during the war that she was "a beautiful blonde, of great intelligence, who speaks many languages very well, and enjoys a great ascendancy over the clients of the house." That ascendancy she exercised ruthlessly, first driving her pupils to their limit in learning their hazardous profession, then demanding that they take big risks to execute her missions, keeping them meanwhile under surveillance. Her pre-war existence was dubious—but in secret service she found herself. She gloried in it.

"All my life I have loved intrigue and power," she told one pupil. "Now I have both. I am on confidential terms with the highest. Only in secret service can one realize fully a desire for an interesting, adventurous life—that is, if one is not too scrupulous. I would not exchange my position for a throne."

She reigned in Antwerp through the war, living in a fine suite at a leading hotel, but the shifting boundaries of her shadowy realm extended farther, across frontiers into Switzerland, and Holland; even into France, behind the Allied lines, and England. Spies she trained gathered information about the Americans as well as about the French and British.

A devoted Belgian agent went through her school, and to him the Allies owed a minute report of Fräulein's interesting methods. Secrecy was her first and great commandment. She tried to conceal by

ry means from Allied spies the identi- of the pupils continually being sent other branches of the German secret ice. These pupils were brought into werp usually only by automobile, or y train, they were met at the station. ays the automobile shades were ered. The new pupil must see none of other pupils, nor be seen by them. hrough darkened halls, with all doors ed, he was led to one of many rooms ked with letters of the alphabet and gned each to a special group of pupils teachers. Entering that room, he n to become a spy, for the letter on oor, together with another letter and number of his matriculation in Fräu- s select academy, were to become his et designation in her system. These concealed later on passports that the received and got him through many es where others could not pass.

MEDIATELY Fräulein gave the new pil a sort of intelligence test, to find what he knew, and could know, his city, memory, presence of mind. If assed that grilling, his troubles be- Through waking hours he was tifically crammed by one German rt after another, with information t French, British, and American es, how they were organized, what ment they used, what guns. No ern school has a more complete ction of models for demonstration: s of warships, dirigibles, airplanes, , weapons of all sorts, colored charts iforms and badges of rank.

at groundwork mastered, the course grew even more secret. Mysterious men, described only as "of the German middle class," visited him in his secluded room, to teach him how, when he had gathered information, to accomplish the harder task of getting it back to Fräulein. They showed him how to write, often with a ball-pointed pen, invisible messages on paper, handkerchiefs, margins of newspapers, and how to bring out by chemical reagents the further instructions he would receive from time to time written between the lines of apparently innocent letters. They taught him secret ciphers to be used in his correspondence with Fräulein.

Like a conscientious teacher, Fräulein gave her graduating pupils good advice.

"Be good," she would say, "and be careful. Keep sober. Above all, remember that in secret service he lives longest who lives alone. The Allied secret services put women counter-spies on men, and men counter-spies on women. Watch yourself. Plan everything you do carefully, for your success, and perhaps even your life, will depend on your capacity for taking pains. And bring me facts, not opinions!"

So long as a spy worked under her, her eye was on him. Not only had she spies to spy upon the enemy, but spies to spy upon her spies. Were they in Paris, or London, or Bar-le-Duc, she knew what they did and whether they followed her commands. Supposing himself safe, one of them sought relaxation in the society of a Paris dancer. Soon, on a boulevard, a polite stranger asked him for a light, then remarked casually, "You have forgotten Fräulein's warning," and walked on.

A few of the dutiful she paid as much as $2,000 a month. The faithless she paid, sometimes, with death. Not one, but several of her unsuccessful agents, she sent back into enemy territory to walk almost into the face of a firing squad. She knew many ways to put the Allied counter-spies on their trail. One was to send to the spy, by a route she knew they had discovered, in code she knew they had solved, orders to do a job that could not be done undetected. Then, hoping that Allied attention had been distracted, she would send to the same place where her miserable victim had just been caught, a real spy with a real assignment.

FRÄULEIN ruled her satellites regardless of previous race or condition. There were few German patriots among them. There were renegade Belgians, often criminals, recruited by a Belgian traitor who ran an Antwerp hotel; decayed Dutchmen unable to earn an honest living; nondescripts of all races seeking money and adventure.

She had a few assistants of a higher type, German army officers of undoubted patriotism, well educated, and experienced. One such the Allies knew as "Schmidt," "a remarkable person equipped with identification documents and Belgian decorations, who is continually traveling between Belgium, Holland, England, and France." Another was an expert engineer, of high rank and, some say, title, whose death she caused in a dramatic manner that illustrates the deadly female at work.

It was about the first tanks—crude, gangling, but overpoweringly a new and undeniable threat (*Continued on page 124*)

How You *can* Make Your

An intimate interview with a man who has helped thousands of men and women to change their speaking voices from liabilities to business and social assets

"FOR the love of Pete, turn him off!"

"Oh, give us some music, can't you?"

The boy at the radio switches the dial, and the soft tones of a cello float through the room. The family subsides with grunts of content. A half-hour later they are again restless.

"Cut out that speech!"

In every home in America which possesses a radio the speaking voice has a hard time finding listeners. Except for political campaign speeches and reports of prize fights or ball games, the dials are usually switched to music—any kind of music rather than talking. We are not particularly friendly to the talking voice, and we are becoming highly critical of its tones. Hollywood has been in veritable panic because many of the silent screen favorites cannot qualify for the new talkies.

Yet, occasionally, there is a speaker or an actor of whom we never tire. Ninety-nine times out of a hundred the secret of his charm lies in the rare quality of his speaking voice. This outspoken preference of ours for some speaking voices above others, on the radio, in the talkies, in social relationships, and in business, is creating a new field for personal development.

Long ago, the telephone companies advertised the development of the "voice with the smile." About ten years ago, business men began to give special attention to their voices. Many of them joined with ambitious lawyers, statesmen, and professional speakers in active voice training. These men of business were preparing, not for public speaking, but for the everyday, ordinary conversations they carried on with their employees and business associates. Today, Y. M. C. A.'s, Rotary clubs, and business organizations are forming classes in voice development. Because of this new interest in the speaking voice, I set out to get an interview with Otho Van Campen, who has given at least ten years to training voices for use in ordinary business and conversation.

In his classes at the homes of various business organizations and in his studio at 220 West 42nd Street, New York City, Van Campen has given seven thousand two hundred and eighty men instruction in voice development. Nearly all of these pupils were in business or in the professions. Very few of them had any notion of using their voices in public work. In exceptional circumstances, he has taken women pupils. This past winter he had three classes under the New York Women's Chamber of Commerce.

VAN CAMPEN'S preparation for his work is unusual. He was born blind—the attending physician said permanently blind. His mother, ignoring the verdict, took the infant to a specialist who performed an operation. With several repetitions of this operation, the boy gained almost half his sight at four years of age. But even with this great improvement, Van Campen has had to make out with less than half the eyesight of the average man. One result of his partial blindness has been an extraordinary development of the hearing faculty. But for many years it never occurred to him that his highly developed sense of hearing had any commercial value.

Upon his graduation from grammar school at the age of fifteen, he decided not to attempt high school work in competition with pupils of normal eyesight. From that time on, he acquired his education informally under the guidance of his mother and an uncle. And as he studied, he worked at various jobs. He tried many things with little success. Finally, he got a place as a tenor soloist; he also worked as a salesman.

When he was twenty-four a physician who was examining him suggested that in view of his extraordinary power of hearing he would do well to specialize in voice

Speaking Voice Attractive

By

HELEN CHRISTINE BENNETT

ivation. He at once began to study. , in addition to the usual conventional :e training, he became a special student ı nerve specialists and leading physi- ıs who believed in voice therapeutics. our years, he opened his first class. In ten subsequent years, he has helped :e thousands of men to improve their :es.

'HE most perfect example of the hu- man voice among those I know is that ıraham McNamee," Mr. Van Campen to me. "He has thousands of ad- ers and friends. People who never ex- to see him, who know nothing of his onal history, like him. Why? Because vonderful voice, full of melody, friend- ıs, enthusiasm, and sincerity, is a flexi- instrument that conveys every light shade of feeling and thought. With- knowing anything about Graham Namee personally, you feel certain you would like him for a friend, a hbor, and a fellow citizen. You have : up a personality for the man from sound of his voice.

I can give you no more direct example ıe power and influence of the human e upon other people. The application ıat example is that your voice and : are, at every using, carrying impres- ı. Yet we have paid little attention ır voices compared with the care we nd on the rest of our persons. We d much time, thought, and hard work arning to dress our bodies carefully, :quiring a system of prescribed eti- te, in developing certain approved ts of conduct. But, in the main, our :s continue to be raw products as far ır conscious control of them goes. If : of us have good voices, it is usually use our original voices as children good and we have failed to spoil ı as we grew up.

'he great majority of people have ed their voices by allowing them to ontrolled by their emotions, desires, and aversions instead of using the , as we use the right hand, as an in- nent of service. The voice is far more ıle and is much more easily trained the right hand. And it is quite as rtant to all of us.

f you don't believe what I am saying, your telephone and call up six of your ds. As you talk with them, shut your and forget all you know about each *Listen to what their voices say.* Prob- in all six cases you will know at once her the talker is tired, nervous, ex- happy, distressed mentally, bored, ıtated by your calling. But if the n speaking has his voice under con- you will know the *one* of these things *lends you to know and no more.*

am not suggesting that we all culti- vate voices exactly alike. We cannot do that any more than by grooming we can make our faces alike. But we have learned, in some measure, to use our faces as we will, and very few people have even a partial control of their voices.

"The business of life begins with earn- ing a living. In this, voices play a great part, and in the main an unrecog- nized part. Not long ago a man came into my studio. He is an able person but he has moved from one job to another with great frequency. At the last place, at which he was employed, the head of the company sent for him.

"'I'm going to let you go,' he said, 'and I honestly don't know why. But you can- not get along in that room; the other em- ployees dislike you and actively object to you. Your work is all right. I have an idea it's your voice. Why don't you try to get it in shape?'

"When I listened to the really raucous tones of my new pupil I did not wonder. The man had a habit of finishing a sentence with a rough, sawing sound that outraged the ears. He is already showing definite improvement; in six months he will hardly know himself.

"On one of the biggest metropolitan dailies, the head of the department deal- ing with the classified advertising pon- dered over his reports. There wasn't enough business. The ads were solicited by telephone. The next morning he fixed up a temporary connection and listened in. He stood it for three hours. When he stopped, he was exhausted, irritated to the last degree, and thoroughly convinced that the tones of his women solicitors were driving away customers. Their crudities of speech were almost as bad as the tones of their voices.

"He organized them into a class, had them given lessons in pitching their voices, in the pronunciation and enunciation of words, in softening crude expressions. There were forty women in the class. The course consisted of twenty lessons to be distributed over a period of nine weeks. One or two slow pupils were given addi- tional personal instruction. In the three months following the completion of the course, the department established a new record for the office and this record has been maintained.

"LISTEN carefully to the people talking in the subways. The minute the train starts, the voices rise, become squeaky *and less audible!* The idea that high, shrill tones carry farther than low ones is almost universal. But the experiments conducted in the educational laboratories of the Bell Telephone Company prove the contrary. In these tests, the human voice is filtered and accurately measured. The results show conclusively that articulated sounds in low, full tones carry farther and are more powerful against conflicting sounds, than are the high ones. Try it yourself the next time you ride in a train. Pitch your voice as low as you can, and talk slowly, giving your words a chance to get across.

"The same thing holds true of telephone conversations. Many a long-distance call loses out because you become excited or irritated, and raise your voice. Instead, deepen it as much as you can, and then try. In deepening your voice, use the chest tones. Frequently a person who is not experienced in voice control will sink his tones into a guttural roar. Keep your lips mobile, your mouth cavity round, and your jaw relaxed. Your voice knows how to do the work, if you will allow it head- way.

"Usually we begin life, as I have said, with good voices. It is at the time of ado- lescence, when the voice 'changes,' that we lose our unconsciously good voices and need to cultivate consciously good ones. Voice training can profitably begin at from nine to fourteen years. From that time on, anyone with a normal throat can manage to develop a good, well-con- trolled, effective, serviceable voice.

"TO ONE of my classes came a lawyer. He was a member of a successful firm with which he did the research work because he 'had no voice for the court- room.' Knowing that he had always longed to try a case, some of his friends suggested that he enroll in a class in voice training.

"'No use,' he said bluntly; 'you can't teach an old dog new tricks.' Eventually he was sport enough to agree to come in. There were thirty men in the class and it ran for sixteen weeks. He was not inter- ested at first, but finally he forgot himself and his voice began to free itself. At fifty- nine, he tried his first case and won it. To- day he is sixty-five. He appears regularly in court and is sought as an after-dinner speaker. He has a perfectly delightful voice, and an admirably controlled one.

"There are few 'old dogs' in this matter of the voice. It responds to development, to suggestion, to practice, until the whole human system begins to decline.

"In training for the professions, partic- ularly for that of the law, the value of inflection in the speaking voice is of major importance. During the two years I taught in the New York Law School, the students were given intensive training in voice cultivation. Much time was spent in cross-examination and in teaching em- bryo lawyers, just how to convey to the jury the impression they wish to get over.

"A witness is permitted to use but the two words 'yes' and 'no.' But just these two words can convey a hundred meanings. The satirical 'yes' of a witness who knows how to use his voice has thrown many an opposing attorney into despair, while an honest and sincere 'yes' has filled him with delight. First and Only Presentation of a Humorous Sketch Entitled

"COOLIDGE"

Episodes by DWIGHT MORROW

Written and produced by

WILL ROGERS

WIDE WORLD PHOTOS

PRIVATE CITIZEN COOLIDGE has entered the writing field in direct and almost unbeatable competition with the rest of us real high-class Literary Lights, and he has us swamped. No one had any idea that he could write such human and plain, straightaway, interesting stuff. If he had ever made one of his speeches that interesting while he was in there, he would have been elected for life.

That kinder brings up the question: "Who writes these long-winded, uninteresting messages that our Public Men deliver?" It must be one man in Washington that turns 'em all out, for regardless of who is President they are the same ones, and different men couldent possibly think of the same things year after year. It's some guy down there who has the speech contract. You just call up and say, "I want an Acceptance speech," or "I want a Decoration Day speech; I want a Farm Relief speech; I want a Country Is Doing Well speech; I want a Friendship for All Foreign Nations speech."

Well, whoever he is, he is not the one that suggested Lincoln's Gettysburg speech. But it looks like he has written all of 'em since then. Course, Presidents having that Senate on their minds all the time they are in there dont add any to their peace of mind, so they really are not themselves. But the minute Mr. Coolidge got out of there and dident have to be bothered with the Senate, why, he just up and makes himself even more human than any of us.

Now he is going to write a lot of those interesting things for this Magazine, and the Editor tells me they are great. Course, an Editor will say that to everybody but the one that is writing the stuff. They are afraid to brag on him—he might want more money—and I bet you Mr. Coolidge is getting wise quick, too. It certainly does seem awful appropriate that he should be writing for THE AMERICAN MAGAZINE. For it features human interest stories. Now he is going to tell you a lot about himself and his work, but there is going to be a lot of stuff that he wont tell you. Modesty alone would forbid him mentioning lots of the things that I am going to tell you, and no one has ever accused Mr. Coolidge of not being modest. I have had lots of dope on him for over a year, but him being President, why, naturally it wouldent seem very appropriate to use it then.

WHEN you want to get a line on a fellow, dont get it from the man himself; get it from someone who knows him. Now, I was in Mexico about a year and a half ago, and I traveled around on the train with Ambassador Morrow and President Calles for a couple of weeks; then back and was at the Embassy for a couple more. Mr. Morrow and me only had two topics of conversation, Coolidge and Calles. We were doping out what kind of a fellow Calles was, and I was trying to find out from Mr. Morrow if his friend Coolidge was going to run again. He had issued his famous "I dont choose," but I believed that he had spent many days with the Dictionary finding that exact word, for I had never heard of a word that more nearly meant "Yes, No, Maby, Cant tell yet, Perhaps, and Dont want to, but will in a pinch." Morrow naturally thought that he meant it, but that there might be (what do you call 'em) extenuating circumstances. Now, we all consider that Morrow knows Coolidge better than anybody else (which dont mean anything), for Morrow would often remark, "I dont know him at all." But in sitting night after night arguing it out he naturally told me many things of Mr. Coolidge.

I am not going to try and tell 'em to you in a routine from the time that they entered Amherst, but just sorter like Mr. Morrow told 'em to me. The most impressive one, of course, to me was what he told Morrow after being sworn in as President. Morrow, of course, went down to Washington as soon after this event as possible to pay his respects and wish his old friend well. But let's just let Mr. Morrow testify in this case—"Coolidge vs. the People." Now, Mr. Morrow, you take the stand and tell what happened when you first saw Coolidge after his being made President, and any other things, no matter how small, or how insignificant, that might be relevant to finding out something about this rather silent man. Just tell it in your own way.

"Well," says Mr. Morrow, "I got down there and visited him at his Hotel, for he gave Mrs. Harding plenty of time to get her things out of the White House, for which she was always tremendously appreciative. I was in the room with him for a long time and he dident say a word. That wasent anything new; I had seen that happen many times before. When finally he turned to me and said, 'Dwight, I am NOT going to make the mistake that lots of them have made; I am NOT going to try and be a GREAT President.'

"Now, that's all he said. But wasent that great? You know, Will, Coolidge is not awed by the importance of the Presidency. He has told me since that he just considered it a *Chore*. (You town boys wont know what a chore is. It's just one of the various evening jobs that must be done around a farm, like milking, chopping wood, and feeding stock.) You see, with every President the job has meant something; with Wilson it was his Dream, with Roosevelt it was a Lark, with Taft a Laugh, and with Harding a Nightmare. But with Coolidge it was just a Chore—a thing he was going to go about in the ordinary routine of the evening's work. He dident enter it with any Great Ideas. Neither did he enter it with any Great Humility. He figured it's just one of the jobs that we have in this country to do, and he happened by chance to be the one called on to do it; and that's where his success has come from.

"I will never forget one time Mrs. Morrow and I were there. The Oil Scandal was at its heighth, and it looked like heavy things were brewing. Coolidge turned and looked out of a window, then said, 'They

y that Lincoln could look out of that indow and see a Rebel Flag flying. Well, guess nobody since Lincoln has had that uch to worry about.' Now, how you ing to beat a fellow that keeps his feet the ground that way?

"You know, he is quite a character, this low. We were dining at the White ouse one night. It was kind of a New igland Boiled Dinner. Speaker of the ouse Gillett was there, he and his wife. ey were old family friends of the Cool-ges. Well, dinner was served promptly seven as usual. After dinner us men-ks retired to a room and smoked and itted for fifteen min-s; then we joined the ies. We were in there over thirty minutes, ich brought it up per-s to 8:45 or 9 o'clock. got up, shook hands h all of us, says 'Good ht,' and was off to . We go down to get cars at the door, and ett's driver was not re—he evidently had e for his own dinner hadent yet returned. ett turned to me and , 'Dwight, I have here for dinner a en times, and I order car earlier every , but I have never been able to order it y enough.'

But, speaking of ers, I must tell you it the first time we entertained the Cool-s when our children present. It was at Touraine Hotel, Bos-He had just been e Governor, and he Mrs. Coolidge dined us. There were sev-in the party. My hter Anne had her r tied up from some trivial accident. the company had one, the girls were marking how quiet Coolidge was, that dent spoken to any-hardly during the evening. Then spoke up and said, I like him; I think fine. He is the one in the whole all evening that d that my finger irt.' Now, of course is just what he do—he could do without taking a e of being quoted hat he said. He discuss sore fin-th you lots quicker he would subjects e.

d I tell you about ne when we were ted from Amherst? ve had been pretty y during our course e day I asked him, 'Calvin, where do you expect to set up in your law practice?' naturally figuring that he would try New York, or at least Boston, or Springfield. He said, 'I am going to stay here; I dont believe in going any further for anything than is necessary.' And he did stay there, right there in Northampton and became President. A lot of the rest of the class started running around to big cities, and now you cant find 'em. He stuck right where he come from and got elected to everything that has an election attached to it. He was Lieutenant Governor of Massachusetts and had one room at the old Adams House. He was elected Governor, and instead of taking a house, he just took another room (at a rate).

"He was in the Legislature away back in the early days and I went up to see him one time. (At that time they elected their Legislature every year.) He was also studying and trying to practice law. So I asked him, 'Calvin, how do you manage to work this? It must take you half your year to get around and 'lectioneer, and get elected for the next term.'

"'Oh, it dont take much time, Dwight,' he said. Then, after a pause, he added, 'I got things pretty well organized.'

"'But, Calvin, dont tell me that you can get elected without any effort.'

"'Oh, I just let nature take its course.'

"'Now, listen, that's all right to tell everybody else, but you cant tell me you dont do something.'

"'Well, maby I do nudge nature a little bit.' And he give one of his sly little grins as he admitted sorter helping nature out a bit.

"Did I ever tell you about one Sunday we was all at the White House and going to church, and somebody asked what time do we go? Coolidge answered immediately, 'Seven minutes to eleven at the elevator upstairs.' And that's when we went.

"Did I ever tell you how I got in with him at school in the first place? Well, I was from away out in Pittsburgh, and here I was at school right in the heart of New England, and I wanted to get right into the real atmosphere of New England and find a real New Englander; and out of all of them he was the only real New England atmosphere there was. The other New Englanders were not the type at all.

"Did I tell you about the time they nominated him at the Convention and was looking for a Vice President to run with him? Well, I was out there at Cleveland. Guess you was too, Will. I remember seeing you and Bryan sitting together at the Press stands. Great old fellow, Bryan. Well, I was not much of a Politician, but on account of it being Coolidge that was to be nominated I thought I would go. I knew all the Leaders and was kinder on the inside. You

CALVIN COOLIDGE

gives you

The Human Side *of the* Presidency

Do you know why the President does not ride on regular trains?
Do you know how many dinner invitations he accepts in a year?
Do you know what constitutes the appalling burden of his office?
Do you know the differences between the ordinary mind and the political mind?
Do you know why the Presidency has increased and the Congress decreased in popular favor?
Do you know how President Coolidge avoided personal opposition?

ALL of these things, and many more, you will know after reading the splendid articles written for THE AMERICAN MAGAZINE by Mr. Coolidge. He explains and humanizes the Presidency better than it has ever been done before. These vividly interesting and permanently important articles will reveal to you your government in its beneficence and power; and they will reveal, also, the careful, common-sense mind of the New Englander who for more than five years presided over and directed, so effectively and quietly, the vast affairs of this great nation.

RATTLESNAKE Golf

By DON MARQUIS

MAJOR STACEY eased his long, lank frame into a wicker chair next mine on the hotel veranda, rolled himself a cigarette, borrowed a match, and inquired:

"Well, how did you like our sun-kissed California Christmas?"

It was my first winter in Hollywood, and I was discovering that natives and old residents like to hear newcomers enthuse over the wonderful climate from time to time; so I did the proper thing.

"But," I added, "you don't look so cheerful yourself, Major."

"I'm not," he returned. "A couple more Yuletide seasons like this last one, and I'll be on a downtown corner with a tin cup making indigent noises. Santa Claus took more toys away from me than he left in my stocking this year."

"What's been the trouble?"

The Major blew a couple of meditative smoke rings and appeared to consider profoundly. "I impute my financial downfall," he said finally, "to golf and unwise super-salesmanship—to that and the notions of Colonel Elwood B. Sanford."

"You mean the gentleman with the long, white hair and the broad hat who comes here to see you sometimes?"

"Uh-huh, that's the Colonel. He tries to make up as he thinks a Southern colonel of the old school ought to look. But he isn't one. I've heard him try to put it across on innocent Easterners like yourself that he's an old Californian, but he isn't that, either. My private opinion is that he spent the greater part of his life touring the Middle West as an Old Herb Doctor in a Medicine Show."

A sudden involuntary contraction of the Major's facial muscles mangled his cigarette, and it was with a hard look in his eye that he added: "He's got a past, Colonel Elwood B. Sanford has. And if he played the deceitful part I think maybe he played, he's got more past than he's got future."

"Tell me about it," I invited. During our six weeks' acquaintance Major Stacey has learned to value me as an auditor, because I know nothing whatever about the West and cannot be sure when he is exaggerating. Indeed, I cannot even be sure when he is departing entirely from the realm of possibilities just for the sake of indulging his own sense of humor and astonishing me.

Another reason the Major cultivates my society is the hope that he will some day sell me something. I find him an interesting raconteur, but—not to cast suspicion upon a man who frequently and fervently affirms his own business integrity—I don't think I shall ever have the impulse to invest in any enterprise which he recommends.

"I'VE known Colonel Elwood B. Sanford," began Major Stacey, "about five years; ever since he first showed himself in this town. And, until the events of the last week transpired, I've rather admired the man; admired him for his salesmanship ability, and for his enthusiasm. He's a genius; sometimes he goes too far, but the genius is there. He isn't always sound, he hasn't always got judgment, but he's always got brilliance.

"When he's going good, he could sell roller skates to an old ladies' home. For a while I employed him in my own real estate business, first giving him a careful warning, of course, never to misrepresent anything. I don't know whether he heeded it or not, but I've got my suspicions. I've got a reputation to maintain in this great and growing metropolis, and I've never yet made a statement nor put over a deal that wouldn't bear scrutiny. I've told you a lot of yarns about the West and my experiences, and did you ever catch me once in the slightest deviation from gospel truth? No, sir, not once!

"After about a year the Colonel left me and started his own real estate office; but there's one thing we've always had a sort of partnership agreement about. That's my little place back in the hills, by Cactus Canyon. I'd told him that if he could sell that place for me, I'd give him an enormous commission—he could have fifty per cent of the entire proceeds for his own.

"You see, it's not been so easy to sell. He's tried several times, and so have I,

He figured out for Willis what he'd make a year selling eagle feathers to the Indians

d I'm a pretty fair salesman myself, of e old-fashioned, conservative type. I uld never understand why that little ace should be so hard to get rid of; for s got everything in the way of diversities d opportunities that heart could wish. s only about forty miles from here, and s my belief that some day this metropolis ll grow right up to its edges and spill o it.

BOUT two weeks ago the Colonel—and I don't really believe that old ar-flusher is any more a real colonel than m a major—came over here to see me, d he sat down in that very chair you're in w, and he says, with his voice all husked with excitement:

"'Major, I've got a sucker!'

"'What do you mean, Colonel San-d?' I asked. 'I don't understand you.'

'I never like to have slang expressions e that addressed to me, especially right on a hotel veranda with people com- and going. It cheapens legitimate nmerce, and it doesn't inspire confi-ce if it should be overheard.

"'I mean a boob,' he says. 'A hick. A tomer.'

"'Colonel,' I says, 'are you speaking of usiness prospect?'

"'Uh-huh,' says he, 'a fall guy. And s sap and that Cactus Canyon stuff of ars were just simply made for each er. He's a retired banker who's got erested in the West. And he's some d of a New Yorker, or else maybe an glishman—I can't make out which. ybe both.'

'How do you know he is?' I said.

'He looks like it to me, and he talks it, and he leaves his fork in his left d like it.'

'I don't savvy,' I says.

'You know what I mean,' says the onel. 'He cuts up his grub with his it hand, and then doesn't lay down his fe and change his fork. Keeps the in his left and eats that way.'

'Say,' I said, 'that's a pretty foxy it, too. It leaves the knife in the right d in case trouble starts anywhere near. uess they have to do that in those tern towns nowadays on account of so ay gunmen and hijackers and bandits ing into the night clubs and restau-s all the time. Every time I see a spaper I'm glad I live in the West, re one of these Chicago or New York men I read about can't get me. But do you know he's a banker?'

'He's living at my hotel,' said the onel, 'and I heard a new arrival who an acquaintance of his ask him if he having a little vacation from the king business. We'll take him out in-e great open spaces.'

'Isn't there any way,' I asked, 'to sell that land without letting him see it? t's where we have always made our ake before; we went and showed it to le.'

'Listen,' he says, 'I've got the psy-ogy of this super-selling campaign all ed out. The rougher the country, the er. This fellow is sold on the romance color and picturesqueness of the West. e got to mingle all that in with our ness talk in just the right way. He's opped up right now with the idea of g out with one of the scouts of the old an days.'

Illustrated by
DAVID ROBINSON

"Is there oil?" says the Colonel in a kind of hushed and reverent voice. "Is there oil?" And he took off his hat, like he was in church, or the national anthem was being played, or something

"'You mean the old Indiana days, don't you, when you were selling electric belts at the county fairs?' I asked him.

"'Well, I sold 'em, didn't I?' says the Colonel. 'I've got this thing all fixed. The day before we go out, I'm going to send out a couple of these Hollywood moving picture cowboys, and—'

"'What for?' I interrupted him. 'If he wants to see cow hands, he can see some of Old Man Thompson's genuine ones. There's always three or four driving the flivver around to listen to the radio in my shack when I'm up there.'

"'No,' said the Colonel, 'they won't do. They won't look like the cowboys he's seen on the stage and the screen—won't talk like it or act like it or dress like it or be fooling around with guns all the time. They haven't got the picturesqueness of those camera-wise boys. All they understand is how to handle cattle. And, say, you'd better make sure there are some cows standing about, where this prospect can see my movie boys herding them, or rounding them up, or whatever it is that cowboys do.'

"The Colonel isn't really much less ignorant about the real West than you are; he's lived in hotels and boarding-houses ever since he's been out here.

"'Cows?' I said to him. 'There's no cows on my place.'

"'Well, why don't you have cows on it?' he says, sort of peevish.

"'IF YOU were a cow,' I said, 'you'd get so, yourself, you'd want something to eat besides rattlesnakes and golf balls.'

"'Golf balls?'

"'Uh-huh. Since you were up there last I've fixed up a golf course of my own. There must be five or six hundred golf balls lying around there now in places they can't be played out of.'

"'Say,' says he, 'that's great. This gets better and better. This fellow told me yesterday all the courses he'd seen around Hollywood were too flat to suit him. Why, some of the biggest deals in the business world are pulled off on golf courses these days! It's a system. You let the prospect beat you, and while he's still feeling tickled about it you get his name on the dotted

Digitized by Google
Original from
UNIVERSITY OF IOWA

line. And I'm quite a golfer myself—What's par on this course of yours?'

"'On my golf course,' I said, 'it's not so much a question of what you can go round in. The question is: Can you go round? It's a little rough here and there.'

"'Fine!' said the Colonel. 'He'll love that. And he'll be amused at the idea of a golf course being mixed up with this old romantic West we're going to show him. You go up ahead of everybody, with supplies to last a week or so, and borrow some of Old Man Thompson's cows to make the place look right.'

"I agreed, but I doubted whether Thompson would lend me any of his cows. One of the reasons he has to have hired hands is to keep his cows off that little place of mine. Thompson's ranch is over beyond the hills from me, and it's about the size of New England or Germany, with plenty of feed and water on it; and since the price of beef had been up the last couple of years, he naturally doesn't want to lose any more cows than he has to. And every time any of his cattle get onto my place they seem to strike bad luck, somehow. Sand-storms bury 'em. Or boulders roll down and hit 'em. Or insects and things sting 'em till they swell up and burst. Or they fall into canyons and die of thirst. Or else animals molest 'em.

"One of the most surprising things to me is the amount of animal life that place supports as compared to the vegetation. The only way I can figure it out is that the animals make their living by eating each other. That place just gave its heart and mind and soul to cactus when the world was made. Enemies of mine have tried to spread the story that it's the only land in the world that isn't fertile enough to grow sagebrush. But the truth is that with all that cactus I don't really need any sagebrush. No, sir, cactus is the only vegetation, practically, that it's got. And I've always had a theory that cactus is more like an animal than it is like a vegetable, anyhow. A cactus plant will go farther out of its way to do you dirt than a rattlesnake will. The snake will rattle first and give you a chance, but cactus will stab you in the dark without a word of warning. And a Gila monster or a horned toad is almost a vegetable compared to cactus, and a good-natured vegetable at that—almost a fruit, you might say.

"SO I went out first, along with a couple of camera cowboys who were temporarily resting from their art. One of them was Roy Peters, who had originated in the wilds of New Jersey, where you've got to know how to ride hard and shoot straight—and Roy really had learned how to ride well enough, somewhere or other, for the film business. The other was Fred Parsons, and Fred was a genuine cow hand before he went and contaminated himself with romance and pictures. I hired horses to match their make-ups from Old Man Thompson, but he wouldn't rent me any cows.

"The day before Christmas the Colonel comes out, looking as kind-hearted as Santa Claus, with this gift, whose name was Willis Hitchcock.

"When I saw Willis I liked him right off, and I was glad that this was a perfectly legitimate business deal he was going to have put across on him. Nothing shady, like that Colonel Elwood B. Sanford might have thought up if he had been operating alone, without my restraining conscience. Willis was between thirty-five and forty, and mighty pleasant, and full of innocent and eager curiosity about the West, like you are. He insisted on helping us get supper that night, and clean up afterwards. He said he was crazy about roughing it like this, but he'd been so tied up in business and money-making ever since he left college that he'd never had a chance before. And Old Man Thompson and some of his hands came over after supper, and everybody talked West, West, West.

"Christmas Day, we didn't have either business or golf. We warmed up a couple of turkeys I'd bought in a Hollywood delicatessen store, and opened up some bottles of drug-store cooking tonic, sherry type, which I get from an Italian grape ranch, and had a pioneer Christmas in the wilds—or, at least, Willis seemed to think it was.

"NEXT morning I got out my golf irons, for wooden clubs get all split up on my course, and put on some boots and chaps, and handed some to Willis and the others. Thompson and some of his employees had come over, full of friendly curiosity, to be a gallery and put in a helping word when the sales talk seemed to need it; and Willis and Roy Peters and the Colonel and me were to be a foursome. Willis looked surprised at the boots and chaps.

"'For golf?' he says.

"I saw right then it would be better to deal quite frankly with this problem at the start and get it over with. 'Once, Mr. Hitchcock,' I said, 'I heard about a couple of rattlesnakes being seen in this neighborhood, and since then I've played golf in these things.'

"'Yes,' says Colonel Elwood B. Sanford. 'Sometimes they come up here from the desert to spawn.' Then a sudden light came into the Colonel's eyes, like it does when a selling idea hits him with a rush. He was looking at Old Man Thompson and I noticed that Thompson had on the rattlesnake-skin vest he sports when he wants to dress up special.

"'Stacey,' says the Colonel, turning to me, 'I wish your rattlesnake crop was bigger and more dependable than it is, the prices they are bringing these days.'

"I wondered why rattlesnakes had become desirable all of a sudden; but Thompson seemed to be on. 'Your place would support a million of them, Major Stacey, if you only stocked and cultivated it the way I do mine,' says he.

"'A million at ten dollars a pelt runs into money,' says the Colonel; and I cursed him in my heart for saying 'pelt.' I realized right then that he couldn't have had much experience in rural and pastoral salesmanship, only town stuff.

"But it didn't seem to make any difference to Willis; he was looking at the Colonel as if fascinated. 'And yet,' goes on the Colonel, 'it may be only a passing fad, that Mexican and South American craze for rattlesnake vests. By the time you'd harvested three or four million pelts the style might change and the market bust. After all, it's only a by-product.'

"We left it at that, to soak into Willis's mind, and went on to play the first hole. We wetted some sand with water from the canteens the boys carried, and teed up. You can't use these little wooden tees on my course, for they won't drive in anywhere, and I've never had any iron tees made for fear it might call attention to the nature of the soil.

"My first hole is a kind of a dog-leg hole. It's sort of downhill in its general tendency for the first seven or eight hundred yards, and then you roll into an arroyo and turn to your right and follow the arroyo for quite a piece till you get to the green. And it's really green, too. There's a nice flat rock there that a mere child ought to be able to putt on, and I painted it green so as to make things seem more homelike and cozy.

"I've got a direction sign up at the brink of the arroyo. It says 'Pomegranate Boulevard' on it. I've got quite a lot of signs like that around my place. Once there was considerable excitement over selling it for a suburban development; it's only about forty miles from Los Angeles, the fastest-growing metropolis on this earth. I never could understand why that suburban project fell through, but when it did I used the street signs to mark out directions and greens. The first hole itself is at the corner of Pomegranate Boulevard and Geranium Avenue, where the modern high school building was going to be, in one of the classiest residence sections.

"'Do we drive right into that canyon?' asks Willis, in surprise.

"'That's not a canyon, that's just a little arroyo,' I informed him. 'We won't get to the canyon much before noon.'

"WILLIS drives off with his full iron and the ball sails over two hundred yards before it hits the ground. Then it struck considerable of a declivity, and rolled and bounded five or six hundred yards more, and jumped into the arroyo with the speed of a machine-gun bullet. One nice thing about my golf course is that you can get distance on the downhill holes, where the cactus isn't too high—in fact, the ball wouldn't stop at all unless it hit a hill or jumped into a gulch. I've made all my downhill holes not more than par sevens and eights, even when they're twelve or fifteen hundred yards long. But the uphill holes run from par tens to par eighteens.

"When we got down into the arroyo we found the balls had bursted open against the rocks on the far side. But I got a local rule that covers that. When a ball bursts, you don't lose either stroke or distance, you just tee up a new one and go ahead. We don't have any earthquakes in this country, but we have temblors sometimes, and I've got another local rule that covers them—anything a temblor does to ground you are playing on makes it 'ground under repair,' and you are entitled to lift out.

"We played around the bend of that dog-leg hole, down towards the corner of Geranium Avenue and Pomegranate Boulevard, and four or five times I heard a buzzing and whirring, but Willis maybe didn't know what that sound meant, for he didn't say anything. And along the brink of the arroyo three or four coyotes were slinking along watching us, and jumping out of sight when I looked up at them, but I didn't call anybody's attention to them. That hole is a natural

On the whole, it was one of the most nervous and irritating golf games I ever went and implicated myself in

pede and scorpion and tarantula d, and while I was still three hun- yards away I saw the surface of the moving and waving, like straw with eze in it. Hundreds of them were , waving thousands of little legs, ng and massacring each other.

slipped one of Old Man Thompson's a niblick and told him to run ahead lean it up, while I halted everybody etending I'd lost a ball. But pretty soon Willis noticed the man working and scraping with the niblick.

"'What's he doing?' he asked, shading his eyes and staring at the green, three hundred yards away.

"'Cleaning the chili grass off the green,' says the Colonel. 'It must have got the start of the Major during the rainy season.'

"'Chili grass?' asks this Willis.

"'Uh-huh,' says the Colonel. 'Chili grass. Just another by-product of this place, but you can't make *chili con carne* without it.'

"After a while the cow hand stopped work, and then in a minute I found that ball, and we played down to the green—this flat rock I was telling you about. When Willis putted into the hole, the ball rolled right out again; it was drifted almost full of sand.

"'Hole's pretty shallow, Major,' complained Willis. (*Continued on page 167*)

BERNARD M. BARUCH *discusses*

The FUTURE of American Business

By BRUCE BARTON

YOU have seen on the stage the office of a big Wall Street financier. The scene rocks with the clatter of tickers, the ringing of telephones, the crush and cries of brokers and telephone boys. Well, Bernard Baruch has been as active as any dramatist could wish and still undertakes major financial and industrial operations, but his office resembles this stage version in just about the same way that a pastor's study resembles a railroad station.

A sunny private room. No ticker. A telephone, but it seldom rings. Thick rugs on the floor; a few fine paintings on the walls. A mahogany desk unencumbered by papers. Behind the desk a tall man, distinguished by supple grace and good looks, with pleasant eyes and a mouth that breaks easily into a smile; silver-gray hair and a strong nose—the sort of nose that Napoleon used to look for in his generals. The man, who is fifty-eight, looks as if he has the blood pressure of a boy of twenty-five, and he seems to have nothing whatever to do. This is Baruch.

We went out to luncheon one day. The first part of our conversation related to the war. It is a painful confession, but true, that I am always behind with my wars. The Civil War still absorbed me when the World War came along, and only now, after ten years of peace, when the real inside stories are beginning to come out, have I begun to transfer my interest to this latest and biggest conflict. Baruch knows as many of these inside stories as any man in America. As chairman of the War Industries Board, he sat at Woodrow Wilson's right hand and marshaled the industries of the nation. The presidents of companies who had been violent competitors met around his table. Sometimes they entered cheerfully into his plan for pooling their output; sometimes they protested. Eventually, guided by Baruch's patience and tact and good humor, they learned a lesson in coöperation which has repaid them many times over for any sacrifice the war demanded. That coöperation within the ranks of industries is one of the present factors in our prosperity.

I asked Baruch to mention some of the other factors, and he began by remarking that when men try to judge the present, or to forecast the future, by using the yardsticks of the past, they show no comprehension of the tremendous changes which were beginning even before the war broke out and which were accelerated by it.

"Let us look back for a minute before we try to look forward," he said. "The first important change was the Federal Reserve Act, which gave us coördinated control of our financial resources and made credit the servant of business instead of its master. The second was the Adamson Act, which made the eight-hour day permanent in the railroads. It was resisted by many leaders who believed that it meant higher prices for everything and consequent hardship to the consuming public, but its influence has been altogether different. The shorter day and the increased wage, which were enacted as a matter of social justice, have come now to be recognized by almost everybody as essential elements in prosperous business. In the old days it was assumed that you must keep wages low and hours long in order to operate effectively. We know now that low wages mean low purchasing power, and that only in proportion as men and women have money to spend and hours in which to enjoy the fruits of their expenditure, can our productive capacity be kept fully employed.

"LET us trace the business influence of the war a little farther," he continued. "The Liberty Loan campaigns taught the people to save and invest, first in Liberty Bonds, then in municipal and railroad bonds, and then in securities of the corporations which represent the work and genius of the American people. Instead of fighting the big corporations, the people now own them and enjoy the fruits of their growth. The War Industries Board established a new coöperative relationship between government and business which Mr. Hoover, as Secretary of Commerce, continued in peace times with results that are beyond measure. During the war we established committees of the various industries, and when prices were fixed, rules were also fixed for distribution, and these rules influenced the scale of wages and working conditions. This helped to lift the standard of all wages, which the manufacturer later found was a fine thing, though he fought it strenuously at first.

"Another thing the American business man found during the war—that he could do things he never thought he could do, and make things that he used to think only the Englishman or the German or the Frenchman could make for him. He made dyes, for example. He made all sorts of articles that had previously been made abroad, and found substitutes for many others. These activities continued after the peace, because we had the money to continue them, and the equipment, as well as labor of unusual intelligence.

"QUANTITY production had its real birth in the war, not only because things had to be made quickly, but also because of the necessity for eliminating all useless styles and the duplication of effort. We learned to standardize and to make a few styles do the work of many. Secretary Hoover, in his department, continued this important work, and every manufacturer now knows how much more profitable it is to keep the machines running constantly on a few kinds and styles, eliminating the waste of big inventories and of constantly stopping and starting the plant.

"The war compelled us to keep a lot of data and statistics. The Secretary of Commerce wisely continued to do this, and so exposed the public every day to a far wider fund of statistical knowledge than business men had ever had before. Hoover understood statistics and he endeavored to place them before the people so that they too would understand.

"So we came out of the war, having vastly expanded our productive capacity and self-confidence. We came out a creditor nation, which might possibly have happened in twenty-five years of peace, but was actually accomplished in three or four years of war. As such a creditor nation we were in a position to lend money all over the world and get foreign trade in return. We came out with a unified banking system, the best security against those alternating periods of inflation and stringency which had made our business history a series of feasts and famines. Finally, we came out with business men who knew a great deal more than they ever did before about how to get the facts and interpret them, and who were believers in a popular high standard of living and of wages."

"You mentioned that before," I suggested.

"I know that, but it looms larger in my mind than (*Continued on page 135*)

Bernard M. Baruch

BERNARD M. BARUCH is one of America's great financiers, who is particularly distinguished for the public services he has rendered and for the clarity of his thinking on economic questions. He is a son of Dr. Simon Baruch, who was a surgeon in the Confederate States Army and later a leader in the medical profession in New York. Mr. Baruch was chairman of the powerful War Industries Board under President Wilson, and was economic adviser for the American Peace Commission. In his early financial career he was a spectacular figure in Wall Street, where he was known as a plunger. But his plunging was done only after long and accurate study. He was a forerunner of the present big market operators who look long and carefully before they leap.

Among my books I made

My Greatest Discovery

By ALBERT PAYSON TERHUNE

FOR nearly a month I had lain dully helpless in my stuffy bedroom looking out over Lake Lucerne and the gleaming white Alps beyond. Appendicitis and peritonitis and "desert fever"—aftermaths of a horseback accident and of jolly hardships in the Syrian wilderness—had caught up with me at Lucerne and challenged my iron-tough body to a life-and-death battle.

I came out of the fracas shaky and weak and with the specialists' commands to get back home to America as soon as possible—there to live the quietest sedentary life for the next half-year or more. I was forbidden to take any violent or even semi-strenuous exercise. A bunged-up heart and a quarrelsome vermiform appendix must be humored and cosseted like crotchety rich relatives, said the Swiss doctors, if I desired to continue my pleasant habit of staying alive.

That summer I learned to read.

I think it is hardly necessary to explain that last sentence in words of one syllable. Naturally, I had learned the mechanical art of reading when I was a child. Also, I had loafed happily through college, barely annexing my A. B. degree. Incidentally, I came of what Brander Matthews called "a reading family." I had thought myself fairly well-read. I had been nothing of the kind.

I did not learn to read until I was forced to give up for a half-year my former joyous pursuits of boxing and fencing and wrestling and hunting and swimming and riding and tramping and boating, and all the half-hundred other forms of vigorous, outdoor exercise which had been my only real delight.

What was left for me to do, unless I wanted to twiddle my thumbs or learn to play solitaire? Of course, there was my work. But that did not take up all my waking hours. To keep from eternal boredom or from breaking the doctors' orders, I began to read.

I did not do it because I wanted to. I admit that. I did it only because there seemed nothing pleasanter to do.

THEN, very gradually, I found I was in a new world. I found myself a discoverer who would not have changed places with Columbus or Peary. I had discovered a realm of absolute fascination. I was discovering more of it every day. For that matter, I still discover more and more of it, and always shall. It is only of late years I realize how little of the wonder-world of reading I have really discovered and how infinitely much of it lies hopelessly far ahead of me.

Now, if this were merely an account of my own selfish discoveries, it would not be worth your reading; nor would THE AMERICAN MAGAZINE's editor let me waste your time over it. I am telling my experiences because I find that they have been shared by hundreds and thousands of other people, and because that same wonder-world lies patiently waiting to be enjoyed by everyone else. There is no magic nor mystery about gaining admittance to it.

Yet, perhaps those who have passed the thirtieth milestone may enter it with more ease than can their juniors. Up to thirty there are so many thrilling or entertaining things to take up one's time. There is the outdoors, above all. Only when muscles and nerves and heart no longer permit the strenuous exercise of earlier days does the average man or woman turn to reading as a steady diversion. (Sometimes not even then.)

It was during my six or seven months "in dry dock" that I formed the reading habit. The time was amply long to give me the right start. Thenceforward, I kept it up for my own selfish pleasure; ever adding to my discoveries; ever realizing more and more how much larger and more fascinating was the territory that lay beyond.

Now, please don't get the picture of a pallid and stoop-shouldered man bending student-like above a ponderous volume on the Einstein Theory or Sanskrit Philology; or of a blank-faced moron skimming greedily through a lurid dime novel and riffling the back pages to see whether or not the hero foils the villain at last and marries the heroine. There is a world-wide middle space between those two pictures. In that tremendous middle space I browsed and am browsing and shall browse.

Some people can read with inconceivable rapidity and yet can absorb everything good in whatever they may be reading. I envy them. I read slowly; not because I want to, but because my mind is not geared to grasp an avalanche of successive printed facts that are hurled at me with express-train speed. Some of them are certain to get past me. Wherefore, I read at ox-team pace.

But there is a vast difference between reading fast and skimming. By whizzing far above a landscape at a hundred miles an hour in an airship, one misses countless beautiful and interesting details of scenery which are plainly visible to him who walks or who rides slowly through the same stretch of country. There is the same difference between skimming through a book and in reading it honestly.

Remember, always, that in skipping or skimming or looking ahead, you are doing yourself an injury and spoiling your own sport—not merely because you are slighting that especial book, but because you are giving yourself a shiftless habit which will mar your joy and comprehension in future reading.

THERE was an undersized office boy with a shrill voice and semi-tough manner, who lived on the lower East Side in New York City. He worked on the New York Evening World. So did I. Let's call him Fogarty. His real name does not matter.

I was in the editorial department of the paper. For years I—as well as others above me—had been trying to devise sets of informatory articles for the editorial page which should catch the attention of the great general public, and which should not only educate, but also entertain. Idea after idea had been tried. None had scored—which brings me back to Fogarty.

One day he brought some mail to my desk. I was glancing over an English illustrated paper which contained a full-page portrait of Lilli Lehmann as Brünnehilde. Fogarty looked at it; then he observed critically:

"She's a dead-ringer for Bradamant, the Warrior Maiden. Or," he reflected, with the air of an (*Continued on page 80*)

"HOW easily you can summon the most entertaining and thoroughly delightful companions on earth," says Mr. Terhune. "You can reach out, let us say, to the adventure shelf of your bookcase, or the books on your table borrowed from the public library. Instantly you are galloping beside d'Artagnan on his breathless ride to recover the queen's diamonds; or you are battling at the side of shaggy Hereward the Wake, or cruising with Amyas Leigh, or keeping the Tiber Bridge with Horatius, or charging into battle in company with the loud-bragging Zagloba or with mincingly heroic Sir Nigel; or you toil sweatingly over desert sands with the Chasseurs d'Afrique, or you scout the wilderness with Natty Bumppo. They are a gay and glorious set of fellows, those immortal adventurers with whom you can travel in Bookland."

"No man can stand for himself," said Colonel Braxton. "He is on one side or the other . . . to build up civilization or to break it down."

Dead Man's Shoes

By MELVILLE DAVISSON POST

Illustrated by W. H. D. KOERNER

IT WAS an obviously futile mission. It was night when Colonel Braxton set out on it, and Mr. Dabney Mason, with him, held that he went on a fool's errand. He knew the facts about the thing, and he knew old Benedict Brant. But the people had appealed to Colonel Braxton, now that the danger to the community from Brant had been made a practical peril by his brother's death.

The brother, while he lived, had stood in the way of old Benedict's vicious plan. The house and lands had descended to him by will drawn after the English fashion, and only at his death did any of the estate pass to this younger brother, Benedict. It was held, and penuriously held, by old Maynard Brant in his life, with a slender moiety of the income passed on to Benedict.

But this very hoarding of the estate, now that Maynard was dead, served only to give Benedict greater resources for the plan that he had always treasured.

There was a marked difference in the two men, as if they were of alien stock. Maynard was a slender, tall old man with huge hands and feet, who stooped in his slouching gait, while the younger brother was short and sturdy, with the symmetrical extremities of his mother, but withal the unexpected strength and vigor that is sometimes found in no exaggerated bulk.

The difference in the natures of the two was no less marked: The elder, careful and penurious, lived for gain—to add an acre and a dollar to its fellow—while the younger longed for the riot of life that was denied him. They lived, as the years ran, together, in the old mansion-house that their father had built near the river—each in his dream: Maynard to grow rich by his economy, and Benedict, when his hour arrived, to turn the house into a place of revel for the river boats; a place of orgy—a foothold on the Ohio for the devil, as the people said.

And the community was now before this menace. Heretofore, the wild life of the river had been kept out. The boats touched and passed; but the Cockaigne that they transported had no foothold. Old Benedict would break a way in for them, and this virus would seep out and corrupt the land.

Was there no way to stop him?

The representatives of the people, with grave faces, came to Colonel Braxton. The thing was imminent, and they did not wait. Old Maynard Brant was hardly buried. If there was anything to do, it should be done at once. They talked in anger and with violence before the lawyer. But he said little. He would go and see Benedict Brant, perhaps he could persuade him. . . . Persuade him! They laughed at the word—turn that aid of the devil from his master's purpose!

Maynard Brant

Nevertheless, Colonel Braxton set out on that mission.

IT WAS night, as I have written, the place was some distance out, and he took a carriage. He was not alone, for Mr. Dabney Mason, the clerk of the circuit court, was with him.

To the eye, as I have written in another place, Mr. Dabney Mason was one of the most elegant gentlemen in Virginia, both in dress and manner. But this aspect, visible and marked, was a veneer of fashion. Under it there were the hard bones of a man. The blood in Mr. Dabney Mason was of the best, and he took the estimable qualities that it gave. Not ambition, perhaps, nor a toiling industry, but courage and high ideals. What he said about a matter could not be broken down. His word stood when it was given, as the word of a man of honor. It stood against the world like that.

And from his youth upward he maintained the accomplishments of the time. He dressed, as I have said, after the English fashion. He was formidable with the dueling pistol, and he could not be put in fear. But he made no pretensions. Within, the man was real.

It is not past belief that he went with Colonel Braxton in some definite intent, and at the suggestion of those who had come to the lawyer with this matter. It was inconceivable that Colonel Braxton should require assistance in the mental adventure of this thing; but in its physical adventures he might indeed require it.

He had a large and careless manner, with no concern about himself, as if, detached from the event, he was thus outside of peril—a manner that to other men seemed injudicious.

IT WAS thus, perhaps, no accident that Colonel Braxton found Mr. Dabney Mason waiting with his carriage when he was ready to set out. The clerk made some excuse. The weather had been severe and now that it was bright and hard he would enjoy the drive, if his presence was agreeable.

Colonel Braxton was taken by surprise, and he could find no way to circumvent the skilled maneuver. It was a thoughtful act, friendly and considerate, and he could not refuse the courtesy. But it added to his plan an element that he did not wish—the presence of a third person at the conference.

The clerk got something of this impression, or he divined it, for he added that he would put Colonel Braxton down before the Brant house, and, as the night was fine, would drive on along the river for the air. He would pick Colonel Braxton up as he returned.

It was the weather of December as it sometimes falls on the Ohio: A heavy snow had descended, carried in from the northwest; followed, not immediately by a thaw, but by a week of lower temperature, with no sun. And the tragic accident that had brought the fortune of his dream to Benedict Brant had come with this fall of snow. I mean the death of his brother Maynard.

Benedict Brant was held in no high esteem, and his word, if the event had depended on that for confirmation, would not have been accepted. The plan that he had tucked away in his mind was known. It had been thwarted, held in abeyance by a lack of money, barred by his brother Maynard, and the man was moving out of middle life. If he was to have his fling he must be getting on the way with it. He was desperate and determined; he could wait no longer.

UNIVERSITY OF IOWA

"He went alone. I saw him crossing the field in the deep snow. . . ."

Therefore, the details about the death old Maynard Brant had come under a eful scrutiny. But the details held. ey corroborated Benedict's story. They ld not be broken down. The thing was arly one of the accidents of life, and it s in line with the well-known habits of Maynard Brant.

He traveled sometimes on the river to rt Pitt, trading in a small way in salt l iron. He was cautious and secretive. e journey, then, in which he lost his , and the manner of it, could not be en as exceptional or out of keeping with habits of the man.

HAPPENED in this fashion:

he snow began to fall about daybreak the seventeenth of December. It fell vily all day. With the coming on of ht, it ceased, the temperature changed, no more snow fell. It lay, how- r, as it had fallen, blanketing the earth. weather remained cold, the days len, and the nights dark. But there no excessive cold. The business of the mmunity went on, and the highways e traveled and packed down.

hree days later, Benedict Brant re- ted that his brother had left the house ut three o'clock in the morning in er to take a river boat to Fort Pitt. Empress of Atlanta passed north ut four o'clock of the morning. She one of the large boats of the river and not come into the landing; but she ld take on any passenger that came to her. There had been a storm of wind on this night, and Benedict had tried to dissuade his brother from the journey, but it was of no use. He set out across the field behind the house to the river, alone, for Benedict was disabled with a rheumatic knee.

Old Maynard intended to row out to the river boat, and get the negro roustabouts to bring his skiff in to the landing while he climbed aboard. But there had come up a storm of wind about that hour of the morning, and Benedict was in some concern for his brother's safety. This message he had given out by the negro woman who had come in to redd up the house, as he was not able, because of his rheumatic knee, to get about. But the neighbors were in no particular concern, as these furtive journeys of old Maynard were not unusual.

It happened, however, that someone noticed the Brant skiff was not tied up at its place, and later it was found drifting, capsized, in the river. This fact gave some impetus to Benedict's anxiety about his brother.

A search was made, and the body of Maynard Brant was found some distance down the Ohio, lodged in a submerged treetop.

The whole matter now came in for a careful scrutiny.

The authorities took it in hand, and went over every detail. But they could find no point at which the facts did not dovetail into Benedict's story.

The Brant house stood back about a quarter of a mile from the river. The county road ran before the house on its landward side; but on the river side a field extended from the house to the Ohio. At the river's edge there was a steamboat landing. There was also, here at the river's edge, a road running along the bank from the steamboat's landing north to a point where it intersected the county highway.

IT HAPPENED, therefore, that the Brant house sat in a sort of angle made by the highway and the road along the river to the steamboat landing. These roads were traveled and the snow packed down. No particular track or footprint could be distinguished on them; but in the field extending from the Brant house to the river the snow lay virgin as it had descended, and here in the snow was the track of old Maynard where he had walked from the house directly across the field to the river.

Digitized by Google
Original from UNIVERSITY OF IOWA

There could be no question about the footprints. No one could mistake old Maynard's big track. He had beyond doubt walked across the field to the river on this night, leaving the print of his huge cowhide shoes in the deep snow.

There was no other track in the field. The footprints were in one direction only—from the house to the river.

Colonel Braxton had gone with the authorities to examine these evidences, for, as I have said, Benedict was not held in high esteem, and his word was not taken without proof. But here was the proof, fortunately for him, remaining in the virgin snow of the field.

His further statements were likewise established by the facts. The body of old Maynard was taken from the river into the town, not to the Brant house, and was minutely examined for any mark or wound. There was no mark or wound on it. It was clear that the skiff had capsized with the man in the storm of wind, and that he had perished in the river.

At that hour, three or four o'clock in the morning, there would be no one at the steamboat landing, as there was no boat scheduled to come in. The man would have been alone. There were no houses at this point near the river, and in the storm no call of the drowning man would have been heard.

The matter was carefully handled for the time, and some trouble taken to verify each detail; but at no point was there found anything not in accord with the story as related by the brother, Benedict.

THIS man took no part in the investigation. He seemed prostrated at the disaster, and as he moved with difficulty by reason of his rheumatic knee, the investigation and the burial were carried through without him.

He spoke frankly of the matter when he was questioned, and in no way endeavored to influence the opinion of the community.

It was known that Maynard contemplated this journey to Fort Pitt in his little trading, for he had drawn some money from the local bank and made some inquiry about the markets. This money in his wallet was found on him when he was taken from the river, and was an added evidence of the accidental nature of the affair.

Maynard Brant had set out on his journey alone; he had met his death alone; and reluctantly the authorities of the state had accepted the inevitable conclusion. "Reluctantly" is the word, for they now had the vicious ambition of old Benedict to meet. When he recovered, he would go about his plans, and the house would presently be a place of revel for the river boats—that foothold for the devil that this law-abiding community of Virginia was so determined to bar out.

It is difficult, at this distance in time, to realize the magnitude of that concern. There was a deep religious sense in this frontier civilization of Virginia, and for the gambling hells of Ohio to come in was to the people of this period no less than an invasion of the soil by Satan . . . the youth of the border would be enticed and damned.

But, for all this acute concern, there was no legal way to prevent old Benedict from going on with his design.

The rights of private property were inviolate. The man could do as he liked with his house. And if he chose to entertain the river, it was, from the standpoint of the law, entirely his own concern.

And, withal, the sturdy sense of justice inherent in these people could not be moved about. It was impersonal, like the advent of the seasons. The security of the law was equally for all. Because one stood in high regard was no reason for its favor. Nor was it to be denied in any measure to the citizen regarded in contempt, or feared for his dangerous opinions. There was no way to get at old Benedict, now that an Act of God, as these accidents were designated, had placed the resources that he needed in his hand.

And so the mission on which Colonel Braxton went with Mr. Dabney Mason on this night was not likely to serve any useful purpose.

Mr. Dabney Mason put Colonel Braxton down in the highway before the Brant house, and drove on.

IT WAS some distance through an avenue of oak trees to the house. The highway was packed and beaten down by travel. The path from it to the house was also trodden down, but elsewhere the land lay white with the covering snow.

There was a dim light at a window in the house and smoke ascended from the chimney. There was a pale moon and the stars were out. The light was almost like a sort of day, and Colonel Braxton had no difficulty to follow the narrow, snow-packed path from the highway to the door.

It was an old house, after the fashion of the time, and in its heyday a pretentious mansion. But it was now fallen into decay; the shutters hung from rusted hinges, panes of glass were broken in the windows, and all about the place the untrimmed shrubbery had grown up. Old Maynard in his economies would make no expenditures on the place, and while he hoarded what he got, the elements depreciated the things he had.

Colonel Braxton came up on the portico and rapped on the door. For some moments there was no sound, and then deep in the house a dog growled.

The lawyer continued to knock on the door, and presently it was opened. He had heard no footsteps approach, and the lawyer thought that the man who finally opened to him had been standing, for some time, just behind the door.

One of two things was certain: Either the man had the inaudible footfall of a shadow, or else, through the narrow pane beside the doorway, Colonel Braxton had been under the man's eye from the moment he got down from the carriage.

Did he keep watch, then, or had the noise of the carriage brought him to the door?

This surveillance gave the lawyer a distinctly unpleasant feeling. Was the creature in some anxiety . . . or what moved him to this furtive act?

Brant pretended a manner of surprise, and they went through the empty house into a great room at the farthest side. It seemed the one room on the first floor that the men had made any shift to live in. There were a table and some chairs and a log fire. The dog, a starved mongrel, disturbed by this late visitor, had returned to his place in the ashes on the brick hearth.

Colonel Braxton sat down at the table near the fire, and old Benedict drew up a chair beyond him. He had come limping through the hall, and now in his chair he nursed his knee. He watched the lawyer's face for some sign indicatory of his mission.

Colonel Braxton put his hat and gloves beside him on the table.

"Brant," he said, "your status in the community has changed."

The man looked up sharply at the lawyer.

"In what manner, changed?" he said.

"Well," replied Colonel Braxton, "for one thing, in this manner: For some years you have been a sort of guest among us. Now, at your brother's death, you are one of the freeholders of the county, with its obligations on you."

"What obligations?"

"Among others," continued the lawyer, "to consider the public welfare. It is an obligation preeminent upon us, and one that the citizen can in no wise evade. Our fathers, at no little sacrifice, laid down a civilization in Virginia that we must, perhaps at an equal sacrifice to ourselves, maintain. Justice and honor and fair dealing do not arrive in a community by any form of accident. They result from an untiring human effort. We have them from the efforts of our fathers, and they are fragile, Brant; difficult to build up and easy to break down. But they are vital. If they are maintained, the race advances on its destiny; and if they are broken down it will degenerate, recede, and perish. And so," he added, "I have come here tonight to find out where you stand."

"Well," said Brant, "if you would know—I stand, sir, for myself."

Colonel Braxton looked down at the table; he went on in his even voice:

"That is precisely what no man can do . . . stand apart from these obligations for himself. He is on one side or the other, with us or against us—to build up our civilization, or to break it down. . . . Which will you do?"

"I shall do as I please," said Brant.

COLONEL BRAXTON remained for some moments as in reflection.

"Now, that," he continued, "is the most perilous of all endeavors. For if one stands for law and order and honor and justice, he can in no wise do as he likes; and if he stands against them, they will destroy him, as the farmer, looking to his crop, destroys the weeds in the field. . . . There are the eternal forces of God to reckon with."

"I don't care a curse for the eternal forces of God," said Brant.

"One may not care," replied the lawyer; "but this lack of care will in no wise serve him. One may not care a curse for gravity, and yet if he steps off into the air from the comb of his roof it will break the bones in his body." He paused and looked across the table at the man.

Brant got up. He was irritated and in anger. But he did not lack for a certain courage.

"I do not know what you drive at, Braxton," he said, "with your little threatening sermon. My brother is dead; I take the property by inheritance, and I shall do as I please with it. I am under no obligation to order my life according to the wishes of the people of this community. I have nothing to fear and nothing to con-

Digitized by Google Original from UNIVERSITY OF IOWA

Benedict Brant crossed to the window swiftly, nimbly, softly, like a cat. . . . In an instant he was beside the lawyer

eal. Everyone knows how my brother net his death."

He indicated the door leading from the oom into the field. There was a window eside this door.

"My brother," he continued, "went out hrough that door, taking a short cut to he river. I tried to dissuade him from his urpose, for there was a storm of wind oming up and I feared for him on the iver in the dark. But I could not move im, and I could not accompany him, for was disabled by my knee. He went alone. I saw him last crossing the field in the deep snow. There is his track. Can anyone mistake it?"

"No," replied the lawyer.

"Is there anything peculiar or strange about my brother's footprints?"

"There is not."

"Would it be possible to imagine that my feet made those tracks in the field?"

"No," replied Colonel Braxton. "They are too small. They are unusually small for a vigorous, strong man. Your foot and the shoe on it is not so large as Maynard Brant's bare foot. Your shoe could not have made that line of footprints to the river."

"And yet," the man went on, "the whole thing is scrutinized like a crime and I am treated like a criminal. The footprints of my brother are nosed over in that field; measured and his shoes set in them. His body is searched for wounds. Is any wound or injury found on him?"

The lawyer repeated his negative reply.

"There is not," he said.

"And every (*Continued on page 145*)

Travel Trails

By ARTHUR EBENHACK and LOREN STOUT

The AMERICAN MAGAZINE

takes great pleasure in presenting the first group of prize-winning home-town trails

YOU are invited, with over two million fellow-readers, to join the biggest globe-encircling jaunt ever made. Arthur Ebenhack, inventor and editor of Travel Trails, with Loren Stout, artist and co-editor, are the navigators of this cruise from their home-towns (Chillicothe, Ohio, and Kansas City, respectively) and back again.

The illustration presents a view of the rim of the earth as seen from a point in space off Cape Horn.

THE following clue paragraph contains 85 of the 100 words required to encircle the globe via the Travel Trail on these pages.

Arise! Tourist cruise to the four corners of the world for all seasoned American wayfarers! Welcome to Arctic Circles and Tropics! Cross the Equator, Cancer, and Capricorn! Land too at the Antipodes. Rich lard and other viands aboard. There are clean pans in the orlop. Pardon our visé of your ticket. Come to the écru Mediterranean Sea and Atlantic. Rope an Arabian panther with a torn lariat. His escape is less certain in the oceans. Ride an ostrich in the arid desert. The weather here is rather torrid. Search open area where natives live for words. See an oread before returning to Home-town. One picture for every person on the journey. If lost, go to a polar border, farther northern arc, or alone scan an isthmus slope; also atone the tort at a far port. Communicate! Farewell! Bon voyage!

Launching the Home-town Series of these Intriguing Trips

See page 138 for solutions of the May Travel Trails and announcement concerning future puzzles

The Trail Makers

THE names of successful trail-makers, with the clue sentences that will help you follow their trails, also shown on these pages, are as follows:

Georgetown, Colorado, to Montgomery, Alabama—Miss Elizabeth Criley (age 11), Georgetown, Colorado. *I was lonesome until I found the delicatessen.*

Asheville, North Carolina, to Lizella, Georgia—Miss Mary J. Redding, Lizella, Georgia. *The clam was clad with a sash.*

Chicago to Anderson, Indiana—Miss Mary M. Stohler, Anderson, Indiana. *Gather one herb in a theater.*

Buffalo to Pittsburgh—A. C. McDonald, Pittsburgh, Pennsylvania. *There was much confab regarding the urn.*

Victoria to Seattle—Mrs. S. C. Mohler, Seattle, Washington. *These ports are open to both American and Canadian trade.*

A Story

By

WILLIAM DUDLEY PELLEY

OLD Seth Wheeler came into Will Seaver's grocery of a night in late July. The ex-owner of the plow works had his bird-gun. He stood it against a barrel. His eyes were bloodshot; his trousers held his nightshirt.

"Ellen's been coaxed t' run off with that drummer," he told the cronies about the cold stove. "Found a note on my bureau as I was blowin' out my lamp."

He referred to his daughter. And silence ensued. He looked suddenly sick, Seth Wheeler. Sick and very old.

"Pray God he marries her!" the wifeless father added. "If he's pulled a monkey-shine 'cos she don't know life's ropes, I'll kill him on sight. I may kill him anyhow!"

Ben Lyman, Seaver's clerk, paled behind his mustache. For the moment, those Vermonters might have adjudged him responsible for the spinster's elopement.

THEY knew whom Seth meant: a man named Ed Thatcher. He "traveled" for a wholesale grocery house—this chronicle commencing back in those years when commercial salesmen left no Bibles in the bedrooms of hotels. He was forty-two years old, weighed a hundred and eighty pounds, bulged in many wrong places, and was addicted to gray derbies, soiled collars, frayed neckties, and an atmosphere of cloves.

It was one of those touch-and-go incidents that alter the lives of whole generations; he had happened to be sitting on a counter in Will's homely bazaar—hat back on his head, hands under his knees, big feet idly swinging—when Ellen Wheeler came in after oil. Kerosene oil. We still burned it then in our Vermont town of Paris—burned it in lamps and bought it by the gallon.

"Who's skinny Miss Flat-Front?" he demanded of Lyman. Ben lolled beside him, beyond the girl's hearing.

"Easy pickin's for someone," the clerk had laughed softly. "Ol' man sold out this winter t' a firm down in Troy. Got his money in cash. There's life for you!—heart failure's due t' kill him any minute."

"Who'll get his jack?"

"She will, o' course. Which is why she's easy pickin's. She never had a feller."

"H'm!" had said Thatcher. He had chewed a frayed toothpick. . . .

Ellen had reached twenty-seven in that winter just passed. She was willowy frail, but her hair, like her face, had been reduced to gentle plainness by a siege with scarlet fever the y
she turned nineteen. That she had never had suitors was
closed by her eyes.

They were patient eyes, naturally. Their wistfulness
you she kept a hope chest in her bedroom. She arose in
nights to sort over the lacy things therein—and cry over th
softly—with the lamp on the floor. Exactly the type to to
messy can to a store smelling of brooms, spices, molasses
the stuff she was there to purchase on a moonless spring

Find Out"

with her destiny in jeopardy. Not that Ellen had any such idea.

She had received her oil, paid for it, gone out holding the can—a potato jabbed on its snout—away from her skirts, taking little, careful steps. Thatcher had looked after her and chewed his toothpick more.

Next day he didn't move on up to Wickford. He had strolled to Maple Terrace and viewed the Wheeler residence. He had strolled down to River Street and "looked over" the plow works. Then he took a front room at the local hotel and started attendance at Calvary Church.

Ellen was organist.

How he met her, what he said to her, how she ever became enamored of him, our small Vermont town doesn't know to this day. But it saw Ellen change. Abruptly, she walked with a certain erectness. Mingling with other women, she acquired an expression of elusive *camaraderie*—as if she now shared a great feminine secret. And because of that secret her wistfulness vanished.

Now they had eloped.

"I wouldn't worry 'bout him not marryin' her," Lyman told the father. He did not confess the reasons for his knowledge—why Thatcher would do it.

"All th' same, I may kill him on sight!"

BUT old Wheeler didn't. He returned home and died. Between three and four o'clock. Ellen read of the demise in a Brattleboro paper. She made Thatcher bring her back—an all-night ride over Haystack Mountain—and got into town to join velvet-footed neighbors entering a church that was sickish with cut flowers.

Which explains how Ed Thatcher got possession of sixty thousand dollars with no more distressing effort than that of removing his hat. At least he did that—when they lowered Seth down beside his wife, asleep for a decade beneath forget-me-nots and wild strawberries in that quiet hillside cemetery.

He had known from the first, according to his statement, that Ellen would need a financial manager. He had his trunk sent up from the Whitney House. He started in to manage. The first word of his success was brought to our office by Uncle Joe Fodder. An afternoon in January it was, the holiday rush behind us and great, woolly snow-polls screening off Main Street.

"Ellen ain't lookin' so pert," said the liveryman. There was a worried frown between his eyes.

"The womenfolks are telling," said Sam Hod, my partner, "she's due to have a youngster sometime in April."

"Yeah, but 'tain't that. He's done as he pleased with her money, y' know. An' dropped a nasty lot of it."

"Dropped it!"

"Terry, my son-in-law, was down t' Albany yesterday. Saw Thatch come out fr'm a stockbroker's office. White as a ghost, Thatch was. Sick! Leaned a hand on Terry when th' two

stopped and spoke. Looks bad to me."

"I know he's squandered plenty over in the Whitney House," said George Kenyon, our foreman. "Jake Hurley told me he plays poker with that basement gang till daybreak Sunday mornin's."

"Pathetic part t' me is," Uncle Joe lamented, "with her daddy gone like he is, th' girl ain't got a single livin' relative. If anything should happen t' Thatch—if he should run out on her, say, after goin' through her cash—she'd be as *alone* as the Statue of Liberty. Worse off, I'm thinkin'. Th' statue's made o' metal."

"Did Ed tell Terry he'd lost any money?"

"No, but he borrowed ten dollars t' git home on. If he hadn't squandered everything, you'd thought he'd cashed a check."

The liveryman had spoken more correctly than he knew. Thursday afternoon in the week which followed, the office door opened and Ellen Thatcher entered.

She asked for Sam Hod.

It was already sapping her physical strength, the business of having that baby. And certain morbid matrons had been condoling with her, that because of her frailty her near-death was probable. Sam felt a heart-wrench at the panic in her eyes.

"I'VE called," she explained, "about Mr. Partridge's ad in the paper for a house. He's the new mill superintendent, isn't he? I wondered if he'd be interested in our place on Maple Terrace?" She added with an effort: "Edwin thinks we should sell."

"So! Edwin thinks you should sell?" the editor muttered.

"It's—too big—for just Edwin and me. We'd be quite as comfortable in three or four rooms."

"Partridge hasn't much cash to pay down. I'm correct in assuming it's cash you want, Ellen? All you can get?"

Tears filmed her eyes. But she would not admit them by wiping them away.

"Well, Edwin's facing rather heavy expenses—"

"I think I understand," Sam reassured her kindly. "But it's a wonder to all of us that—that your husband doesn't take his old job back—*earn* some money—so you needn't sell the place that's been your home." Inwardly he cried: "The cuss has gone through everything! How has he done it in only six months?"

"But I don't want him to take his old job back! Not back on the road."

Something besides physical distress rang sharp in her voice. That way meant the loss of him. She had not only married him and was bearing him a child. If he ever went philandering, she must face the world alone. Terribly alone. A variety of loneliness that few are called to suffer. . . .

NOTHING came of Ellen's errand. A man named Roberts bought the house on the Terrace—for one-half its value. Ellen knew nothing about it till the grant deed was ready and awaiting her signature. The Thatchers moved into a three-room tenement over Charley Fisk's barber shop.

The night Ellen's baby came, Thatch was finally located in a gaming place behind Minot's Pool Room. He didn't respond till that poker game was ended. The child was a girl and Ellen named it Margaret.

In the summer that followed Ed commenced owing money—increasing sums—to all sorts of people besides Doctor Johnson. But if Ellen knew their number, she never let it show. She kept her three rooms pathetically cozy, tended her baby as if it were a doll, and took her only recreation playing on the organ—her mother's organ—one thing of value salvaged from the Maple Terrace sale. She had long since relinquished the organ at Calvary. And she always had Ed's meals ready when he came home at night—after a hard day on the Whitney House veranda or exhausting his mentality working out billiard shots.

Paris wondered, of course, how long it would last.

Spunkier local women called Ellen flabby, a case of arrested development, a discredit to her sex. But even the most caustic did not favor divorce. Those were the days when wives made the best of things—and took in washing. What specifically riled those other women was Ellen's failure to become a shrew. Instead of souring, she seemed more patient. She was sweet, pliable, piteously anxious lest something offend Ed—or he might tire of her—or the fraught evening come when she would not awaken to his key in the lock.

Naturally, Ed knew this, and after a fashion he traded upon it. There was nothing brutal about him. His wife's anxiety flattered him. He was suddenly *comfortable*—with only one fly in the butter of his happiness.

Gradually Paris was realizing that he had "gone through" Ellen's patrimony utterly—that there were no investments, no securities, no accruing dividends—which began to curtail credit.

"I s'pose you know Ellen's gonna have another baby?" said George Kenyon one noontime.

"Good Lord, *no!*" cried Uncle Joe Fodder, a daily visitor at The Telegraph office. "Why, she ain't got her strength back from havin' her first!"

"Just the same, it's the truth," said George, going out. And the office girl confirmed it.

"It'll kill her now sure!" the old man lamented.

But he was wrong.

That third year of their marriage, one wee Thomas Thatcher arrived in the home up over the barber shop. Whisperings went around that coming through that ordeal successfully surprised no one more than Ellen herself. In fact, she had *three* children by big, pudgy Ed—another girl the fifth year, called Evelyn—before the plump drummer got himself in headlines.

HE WENT back to the road. He *had* to go back. The Thatchers had become one of the ragtag families of the place. It went without saying that they owed all the tradesmen. Not even Ellen's girlhood friends called any longer at her door.

At first Ed came home each Saturday noon. But it palled on him finally. The children were noisy; his comfort was gone. He started skipping a week now and then. Ellen had funds to meet some of their bills, yet she began looking dowdy. People commented on the tight, hard expression in her eyes and about her lips, when they saw her occasionally going in and out of stores.

Then, one night in November, Ed came home unexpectedly. He seemed nervous, restless, a bit over-kind. It puzzled his wife. She felt a faint terror. . . .

They had finished supper, Ellen had put the children to bed and was back in the kitchen washing the dishes. Ed had pulled off collar and shoes and was reading The Telegraph, stretched out on the sofa.

The doorbell rang brassily.

"You'd—you'd better—go, Ellen," Thatcher called to his wife.

She dried her hands and went down to the door. She was back in a moment.

"It's a—lady—to see you, Ed. And—she won't give her name."

Ed seemed upset. But he laughed in bravado and fumbled for his slippers. He went down. The wife heard voices, a curt, shrill laugh, then—

BANG!

A shot! . . . a tinkle of glass. The explosion rattled upward—with an acrid

"Maybe I was dreaming. . . . Only it was the queerest dream I'd ever had"

"Ellen! Ellen! Where are you?" cried Uncle Joe

ll of powder. Ellen went cold all over y cold. Yet she groped toward the ding.

Down the stairs she saw her husband—ed—the street door open—chill wind wing in.

Ed! Ed! *What's the matter?"*

dozen pedestrians materialized from here. They jammed the vestibule, r voices raucous.

He's shot!" . . . "He's bleeding!" . . . strange woman did it!" . . . "Some-get a doctor!" . . . "No, take after woman—if he dies it's a murder! . . ."

The noise of running footsteps. Caroming bodies. More wind blowing in. Some spits of hard snow.

Ellen stumbled down. She tried to lift her husband. She did get her arms beneath his shoulders. He looked up once—like a hapless little boy.

"Ellen—I—I—she—"

When Sam reached that vestibule, they had straightened Ed's body lengthwise in the passage. What the editor saw was those great, rakish feet. They stuck up like gravestones. These he saw, and Ed's wife—Ellen Wheeler that was. On the stairs she was seated, arms hooping her knees. . . .

She was suddenly alone. Alone with three children. The thing before which she had cowered—for ten or fifteen years!

They never caught the woman who murdered Ed Thatcher. Rumors got about that a confederate assisted in her baffling escape. What her claim was on Ed was never determined, though not hard to guess. A return to the road had brought his old philandering.

The Elks held a funeral. Attendants at the church were (*Continued on page 73*)

Dare-Devil

The story of a woman who longed for the wings of an airplane, but chose the wings of the heart instead

By ELISABETH SANXAY HOLDING

Illustrated by ARTHUR D. FULLER

IN THE soft summer dusk young Ben Sillinger drove down the street in his battered little second-hand car. Marie was sitting in the hammock on the vine-covered porch, but as soon as he stopped at the gate, she jumped up and came out to him. By the light of the street lamp he could see her well: a tall, thin young creature with a grace of her own that no one else had. She smiled at him, her serious, friendly smile.

"Hello, Ben!" she said. "What did you do about that knock?"

He told her. He opened the hood and held his flashlight over the engine, so that he could explain better the result of his Saturday afternoon's work.

"I hoped I'd finish earlier, so that I could come in the afternoon," he said.

"I was swimming, down at the Cove," she told him.

He knew that. He had been thinking of that, all afternoon, thinking of Marie in her dark swimming-suit and scarlet cap, far out in the bright water, farther out than anyone else, very likely. She was the best swimmer of them all, tireless, fearless. . . . He had so wanted to be with her, but he had felt that he was doing something for her in repairing the car.

"I've tuned her up, all right," he said.

"Oh, good! Shall we go up to the lake, Ben?"

He would rather have sat on the veranda with her. His own home was in Texas; he lived in a boarding-house now, and this little house with its lighted windows had a heart-stirring charm for him. He could have talked so much better here, too.

But he had known that she would want to drive. She got in beside him and he set off down the quiet, tree-lined street.

"Oh, Ben! She's running beautifully!"

"I know," he said. "Want to drive, Marie?"

"I'd love it!" she answered.

He stopped the car and changed places with her. She was the best driver he knew, steady, cool, alert; certainly she took risks, but they were all intelligently calculated. He sat back, looking at her, as they sped along the boulevard; whenever they passed under a light, he had a fleeting glimpse of her lovely dark face, serious and yet happy, her eyes intent upon the road, her little sunburnt hands firm on the wheel. She didn't want to talk.

Well, no wonder, he thought. Nothing very interesting about him. A tall, quiet, fair-haired young fellow, with rather shy blue eyes, and no gift for expressing himself. If she was happy, all right.

The moon had risen when they reached the lake; the water was a sheet of rippling silver; the wind blew some wonderful perfume from the dark woodland. It was so lovely that it made his heart ache. She stopped the car and sat looking before her, and he thought that perhaps she too was stirred by that beauty into a mood even a little like his own. Yet he dared not speak. For all her boyish comradeship and frankness, she was a creature so elusive, remote as the young Diana in her grave innocence. A word, a gesture, might startle her, drive her away from him.

"It's—pretty, isn't it?" he asked, in his soft drawl.

"It's wonderful," she said. "Oh, Ben! I want to see the whole world! I want to see those lakes in Switzerland with the snowy mountains beside them. Just imagine them!"

HIS heart sank. He was earning twenty-seven dollars a week. He had been promised a raise at the end of the year, and he was pretty sure that he would get on well with that firm. But it would take so long. How many years and years before he could dream of going to Switzerland?

"She ought to go," he thought. "She ought to have everything she wants. She's so lovely and wonderful."

"Ben!" she said. "Do you know what I'm going to do?"

He started at the new note in her voice; he looked at her and saw on her face so strange and beautiful a look, a radiant yet grave resolve.

"No. What?" he asked.

"Dad's promised me a car for my birthday. I want to drive up to Banff, and straight across to Vancouver, then down through Washington and Oregon to San Francisco, then back, through Mexico, and home through the southern states. I want to do it all alone. And I want to make a record."

Like lead, his heart was now.

"But, Marie—" he said, "there'd be all sorts of—of dangers, for a girl all alone."

"I'm never afraid," she said simply.

He thought that he could almost have

Marie stood with little Nan by her side while Emily took off

ne down on his knees and begged her t to think of such a thing, have caught r little sunburnt hand and begged her t to go away, out into the world, alone, t to stay—with him.

"Your father—?"

"Dad knows I can be trusted," she id. "I don't lose my head."

"But, Marie—" He tried to smile You'll be meeting some fellow and—tting married before you've gone r."

"No, I won't, Ben!" she assured him. I honestly don't want to get married. here are such an awful lot of things I ant to do! You know, Ben, some day I ant to fly an airplane."

He could not offer her his twenty-seven llars a week and his undistinguished ve then. They sat looking at the silvered ater for a little longer; then he drove r home.

"Good night, Ben!" she said at the te. "You know, you're the best friend ve ever had. I couldn't talk to anyone se about—things like that. Other people uld just laugh at me. You're the only e who understands."

He went back to his boarding-house, up his room, and sat by the open window the dark.

"If I love her, it's my business to derstand her," he thought. "I—I uldn't want to marry her, if she uldn't be happy."

HE next month the War broke out, and he was one of the first of the young mericans who went to Canada to enlist. e did not tell Marie before he went, cause he thought that perhaps he would t be accepted. But he was, and he ote her letters; he went through his aining, and when he got leave, he came ck to see her.

"I'm sorry I've sold my car," he said. "But you've got one now. Shall we go—?"

"Ben!" she interrupted. "Doesn't this leave mean that you'll be going across soon?"

"I reckon so," he said.

It was a cold, clear winter afternoon, and they were in the little sitting-room of her house. He never forgot a detail of that room, old-fashioned, a little shabby, but filled with a warm and kindly homeliness.

She had not known he was coming; he had taken her unawares, and she seemed strange to him, in her house dress, and wearing red felt slippers with fur tops. He thought that somehow those slippers made her look like a princess in some Northern fairy-tale.

"Ben!" she said.

"Marie! You're not *crying?*"

"I guess—I am," she said. "Ben, I've missed you so."

He had not meant to speak then, but the tears in her eyes were more than he could bear.

"I've missed you," he said. "I always miss you, honey. I'll—think of you—all the time. I—I do love you so. . . ."

She threw her arms about his neck; she kissed him and he felt her tears on his face.

"Ben," she said, "I love you."

He could not have believed that her voice could be like that, that there could be that look in her soft, steady eyes.

"I want us to get married before you go," she said.

At first he would not listen to that.

"No!" he said. "Suppose—I got hurt?"

"Then all the more!"

"But, Marie . . . I've got to say it, honey. . . . Suppose I—don't come back?"

"That's just why, Ben. This may be—all the time we'll ever have together."

Because she always faced things, honestly and simply; never pretended to him, or to herself.

He was disconcerted when her father took her part.

"But I don't think it's fair to Marie, sir," Ben protested.

Her father had the same grave reticence that Marie had. It was difficult for him to speak, but when he must speak, he said exactly what he meant.

"No," he said. "I think you're wrong. You shouldn't try to shut anyone away from life. She's got to stand her chance—take her risks— She's well able to. My girl's no coward."

Ben thought that over, and in the end he yielded. They were married two days later in the village church, and Marie looked, he thought, more than ever like a princess from a Northern fairy-tale, in her dark suit with a fur collar, her clear-featured face a little pale. She said good-bye to her father without a tear; she kissed him, and they looked at each other, a long look, filled with that sincerity, that unwavering faith that was in them both.

The young couple went for their few days' honeymoon to New York. Ben would have been reckless with his money, but Marie restrained him. She found things to do which cost almost nothing. She was such a wonderful comrade, so eager, so interested in everything, never tired, never disappointed; and so sweet and grave a lover.

But sometimes, on the top of a bus, in the pine forest at the Botanical Gardens, just walking down the street on a frosty morning, their eyes would meet, and then a dreadful pain sprang at them, seized them, turned them pale. Only this little, little time. . . .

THE last day came, and he had to go. She went to the train with him; leaning out of the window, he saw her on the platform, smiling at him, with that dreadful pain shining in her dark eyes.

She wrote to him that she was taking a course in nursing.

"Because I'd like to go to France, and help, if you don't mind, Ben."

And he thought it would not be fair to say he "minded," not fair for him to go into danger and leave that eager, fearless creature shut away from life. He dreaded to hear that she was ready, that she was going.

But she did not go. She wrote that her father was very busy and she was helping him. And in the autumn he had a shaky little letter:

"Ben, we have a son. Ben, I can't tell you what a beautiful, darling baby he is. I didn't tell you about it before, because I knew you'd worry. He's two days old now, and I'm getting on splendidly. I'll take some snapshots the first moment I can. The nurse won't let me write any more now. Only, I love you, my Ben. God bless and keep you, Ben.

Your loving
Marie."

After the baby was weaned, she found a

Digitized by Google

UNIVERSITY OF IOWA

capable nurse for him, and began to do work for the Red Cross, rolling bandages, soliciting subscriptions, helping out in the village hospital. It was hard for her to do work like that; she would have been better driving an ambulance, nursing overseas. But she would not leave her wonderful baby, and she was glad to do what she could.

Even that did not last. Her father fell ill with pneumonia, and she nursed him until he died. He left her all he had been able to save, but it was very little. She had to sell the house and the furniture, and take a small flat; she could no longer afford a nurse, and she was busy enough with the housework and the care of the baby.

IN THE spring Ben came home, shattered in health, with a wound in the leg that made it painful for him to walk or stand.

"I've got enough money to last a good long while, Ben," she said. "You've got to rest, if you want to get well."

He knew she was right, but it was hard, almost too hard for him. He helped her in the flat as much as she would let him, but he was awkward at such work. In the afternoons she would dress the baby and take him out in his carriage, and Ben would watch them from the window. She was still wearing that dark suit with the fur collar . . . She still had her same limber, easy walk, and he knew that in her heart was still all the old fire and daring, the old longing to see the world.

"I won't let it be like this!" he would say to himself, in agony.

She was the same alert and eager comrade she had ever been, the same tender lover, and he tried not to let her see how he felt, for he knew it would hurt her. But sometimes, catching a glimpse of her in the kitchen, her strong, supple young body bent so patiently over the sink, sometimes lying awake in the hot summer nights, his thoughts were almost more than he could endure.

It was she who made him get well. Left to himself, his impatience would have mastered him, he would have gone back into the world too soon. But she held him back; her sane, strong good-humor brought him through those black hours.

By the end of the year he had his old job again, and was as lean and hard and fit as he had ever been, though he walked with a slight limp, and would to the end of his days. The War was over now, but wartime salaries were still in force; he was making more than he ever had; they were able to take a house and to buy a car.

He never forgot Marie's face when he drove that car home, a surprise for her. She ran into the house, bundled up the baby in his coat and cap, put on her own things, and ran out again.

"Come on, Ben! Let's go!" she cried.

There was no denying the wonderfulness of that baby. As the weather grew warmer, they had glorious week-ends, driving up into the hills, down to the coast. And little Ben was always perfectly content. There was a hammock in the car, in which he could sleep, and when he was awake, he played with his toys, or sat beside his mother while she drove, his dark eyes intent upon the road, his dark brows drawn together in a look so like hers. Beautiful long, long summer days. . . .

When the second baby was born, Marie did not recover quickly. Ben got a nursemaid and a cook to help her, and he was always thinking of new things to bring home to her—fruit, magazines, a balsam pillow, a new sort of toilet water. He would sit by the sofa where she lay and smooth back her hair with a hand not quite steady.

"Next year," he said, "when little Nan's old enough, we'll leave both the kids with the nurse. I'll buy a new car, and we'll take that trip of yours. You'll do the driving. You'll be the captain, honey. I'll just be a passenger, see?"

For he could not bear this, to see her so, like a young eagle with clipped wings, like some beautiful, free wild creature in a cage.

BUT when she was well again, he talked no more of a new car and a trip. The shipping business was very bad, and his old firm failed. He did not tell Marie; he set to work doggedly to find another job, but she knew.

He did find a job, but salaries were dropping, and it was much less than the old one. He found some work to do in the evenings, so that there need be no change in their way of living.

"Ben," she said, "please don't. I'd rather have *you*. No money can make up for our evenings together. I don't need the cook and the nurse any more. And the winter's coming on. Let's sell the car. We can get another one later."

There was no (*Continued on page 122*)

"I've got enough money to last a good long while, Ben," she said. "You've got to rest, if you want to get well"

urther Adventures of a Bargain Hunter

Drawing by
HERMAN PFEIFER

By LEILA LEEDS

INCE April of last year I have received more than three thousand letters, mostly from men and women I have never laid eyes upon. They came from the four ers of the earth, and from a great y interesting places in between.

ey are still coming!

tters from Berlin and Bavaria, from hilippines and Peru, from the great woods of Canada, from the wilds of ania, and the good Lord only knows e else! Letters from the heads of big Avenue shops here in New York. ers from doctors, plumbers, lawyers, ol-teachers, ranchers, housewives, ers, and sweethearts all over the l. Letters from self-confessed rich poor men, beggar men, and at least thief! I'll tell you about *him* later. it, first, let me tell you just a little t myself: I am a professional shopper, urchasing agent. I make my living uying things in New York for people cannot conveniently shop here for selves. A year ago, an article ap- d about me and my work in THE RICAN MAGAZINE. The very day the magazine reached the news- ls, letters began to flood my desk. as I have already said, the deluge is on without a sign of any let-up.

w, letters often tell a great deal than their writers intend that they tell—especially when they are ad- ed to a stranger. Somehow, it is easier to pour out your soul to a n you never expect to see in the flesh it is to confess your troubles and ulties to a close friend. Most of us rience an aftermath of acute em- ssment when we are forced to en- ter a confidant day after day.

e little school-teacher who writes or an expensive bit of lingerie—ex- ing that of course she can't afford it that silk next to her skin makes eel rich clean through to her last r's marked-down coat—isn't afraid eeting *my* accusing eyes over the col- n plate at the next gathering of the s' Aid Society. And the young cow-puncher who confides that he is about to be married, and will I please ma'am send him a pair of blue silk pajamas, isn't scared within an inch of his life every time he turns a corner for fear of running into somebody who shares his shameful secret!

Yes, I am sure that my remoteness really explains why so many people find it easy to look upon me as a sort of mother-confessor-at-large. And I want to tell you that for me the experience has been a very beautiful one. More than that, it has proved an amazing revelation of what goes on in the human heart.

UNTIL recently, I prided myself that my thirty years as a professional shopper had taught me a lot about humanity. But now I realize that I didn't know the half of it. Those three thousand letters from the four corners of the earth have convinced me of something which I didn't suspect before: *The whole world is hungry for romance.*

What do I mean by romance?

Just this: Something that will lift us out of our humdrum, everyday lives and make us believe for a blessed moment that we are as loving, or as beloved, as we have always dreamed of being—that we have it in us to become as rich, or as wise, or as useful as we once hoped to become.

Yes, all of us long for romance, and all of us *need* it—not just the young and flighty, but the sober middle-aged as well. For, thank God, we never get too old to go about hugging dreams to our hearts! If not dreams for ourselves, then dreams for others—for *our* children and *their* children. As we grow wiser in the ways of the world, we may learn to hide our dreams from prying eyes and ridiculing tongues, but in the secret places of our hearts we go right on dreaming. Which is well, for otherwise some of us could not go on living.

Listen to this letter which came with an order for a jar of cold cream from a young wife in the truck-garden section of Viriginia: "I don't know whether I'll ever get time to use the cream or not," she wrote. "When I think I have snatched five minutes for myself, the baby wakes up, or something on the stove boils over. But send the cream along anyway. The sight of it on the bathroom shelf will remind me that I mustn't let go.

"I just won't give up. George works so hard. He deserves something better than a frump to come home to at night. If I could afford help— But there's no use in talking, I *can't.* We are truck farmers, and this year our potato crop failed entirely.

"There have been so many disappointments and we started out five years ago with such high hopes. Perhaps things will never be different, but I keep on believing they will. I've *got* to!"

There you are—that's what I mean! That girl simply dares not lose her faith that dreams come true. She knows that if she did, she would not have the courage to carry on. And in the meantime she is doing her best to keep romance alive in her husband's heart.

MOST wives want to look pretty and fresh for their husbands. But there are times when a tired body refuses to rise to the challenge of the most gallant spirit. And most husbands want to be thoughtful, and tender, and considerate. But so many things come between the wish and the fact. One thing is a husbandly inability to translate feeling into appropriate words and acts. Another is the business of grubbing for a living, which, alas, leaves so little time for actual living. Still another is the lack of money. As one husband who wanted me to select a birthday present for his wife frankly put it:

"A man may want to give his wife a limousine or a string of pearls, and have to spend his last cent to meet the payments on a washing machine or a fireless cooker. But that doesn't keep him from loving her, or (*Continued on page 164*)

"THE people who imagine I am shut out from nature do not dream of the world of loveliness that touch and the sense of smell reveal to me. . . . I delight in the whippoorwill's song, and in the gorgeous colors of a sunset"

I Am Blind —Yet I SEE

I Am Deaf —Yet I HEAR

By HELEN KELLER

PEOPLE often express surprise that I, a deaf and blind woman, can find my greatest enjoyment in the out-of-doors. It seems to them that most of the wonders of nature are completely beyond the reach of my sealed senses. But God has put much of his work in raised print, and the sweet voices of the earth reach me through other avenues than hearing and sight. W. H. Hudson says, "What we see, we feel." With me, it is the other way around; what I feel, I see.

The people who imagine I am shut out from nature do not dream of the world of loveliness that touch and the sense of smell reveal to me. I have the sun and the cool shade, the morning dew upon bush and grass, the stillness of eve—all sweet things—the graceful ferns and a wealth of flowers. For me, too, there is delicious drink in the rill, there are plumes of goldenrod to gather, and the delicate spray of pines quivers in my hand as the wind sweeps over them. For me, too, there is exquisite color. I have a color scheme that is my own. I will try to explain what I mean:

Pink makes me think of a baby's cheek, or a gentle southern breeze. Lilac, which is my teacher's favorite color, makes me think of faces I have loved and kissed.

There are two kinds of red for me. One is the red of warm blood in a healthy body; the other is the red of hell and hate. I like the first red because of its vitality. In the same way, there are two kinds of brown. One is alive—the rich, friendly brown of earth mold; the other is a deep brown, like the trunks of old trees with wormholes in them, or like withered hands.

Orange gives me a happy, cheerful feeling, partly because it is bright and partly because it is friendly to so many other colors. Yellow signifies abundance to me. I think of the yellow sun streaming down. It means life and is rich in promise. Green means exuberance. The warm sun brings out odors that make me think of red; coolness brings out odors that make me think of green.

PHOTOGRAPH BY DORIS ULMANN

Helen Keller and her great teacher, Mrs. John A. Macy (Miss Sullivan)

Black means hopelessness and despair, but gray is like a shawl around the shoulders. White means exaltation.

Light blue means hope, dark blue determination. Violet is tender and deep and half sad. Purple is mysterious. It seems fitting that purple should be seen everywhere in heaven because it symbolizes the deep joy of being alive and moving from one glorious experience to another. It also signifies the depths of love unknown.

I think I have an idea of what sparkling means, for I have felt soap bubbles breaking against my fingers.

I HAVE had many amazing experiences with these fingers which are to me both eye and ear. One of them was "listening" to the song of a whippoorwill. It was soon after I left college, when we were living in an old farmhouse in Wrentham, Massachusetts. My teacher, Miss Sullivan (who later became Mrs. John A. Macy), had had a balcony built for me which opened out of my bedroom so that I could walk there whenever I wanted to. The evergreens came so close to the railing that I could lean over and feel their rustling music. At the south end, I could reach out and touch a wistaria vine which clung to the rail with long, tenacious fingers. At the opposite end, I faced the garden and the apple trees, which were in full bloom, and, oh, so heavenly sweet!

I WAS standing under the wistaria vine with my thoughts far away when suddenly the rail began to vibrate unfamiliarly under my hands. The pulsations were rhythmical, and repeated over and over, exactly as I have felt a note repeated when I have placed my fingers on a singer's throat. All at once they ceased, and I felt the wistaria blossom ticking against my cheek like the pendulum of a fairy clock. I guessed that a breeze or a bird was rocking the vine. Then the rail began vibrating again. A queer beat came always before the rhythmical beats, like nothing I had ever felt before. I did not dare move or call, but Mrs. Macy had heard the sound and put out her hand through the window and touched me very quietly. I knew I must not speak.

She spelled, "That's a whippoorwill. He is standing on the corner post so close to you I believe you could touch him; but you must not—he would fly away and never come back."

Now that I knew he was saying "Whip-poor-will! Whip-poor-will!" over and over I could follow the rhythmical notes. The singing seemed joyous to my touch, and I could feel the notes grow louder and louder, faster and faster.

Mrs. Macy touched me again and spelled, "His ladylove is answering him from the apple trees. Apparently, she has been there all the time, hiding. Now they are singing a duet."

When the rail stopped vibrating she spelled, "They are both in the apple trees now, singing (*Continued on page 152*)

If you can enjoy the sun and flowers and music where there is nothing except darkness and silence you have proved the Mystic Sense — Helen Keller.

HELEN KELLER, one of the world's most famous women, is deaf and blind, but lack of these two senses has not kept her from great achievements. She is an author of real ability, a tireless worker for causes that appeal to her, and she has lived, and continues to live, gloriously and happily. At the left is an example of her philosophy and, incidentally, of her handwriting.

Francis Townsend Hunter

FRANCIS TOWNSEND HUNTER is as good a business man as he is a tennis player — and that's saying a whole mouthful. In the line-up of ranking American tennis stars he stands second to Big Bill Tilden, having achieved this place by sheer concentrated effort and bulldog tenacity. In business, Hunter is the President of the Westchester Newspaper Securities Corporation — an organization which operates a chain of fourteen suburban newspapers. When T. Harold Forbes, Hunter's partner, inherited the New Rochelle Star from his father, Hunter immediately visualized not one suburban newspaper, but a chain. Off he hustled, and using the same sporting qualities which made him a tennis star, got the money and started the ball a-rolling.

The Same Qualities *that* Serve HUNTER *in* Sport Serve Him *in* Business

By JOHN R. TUNIS

THE French call him the "Bulle-dogue."

And a good name, too. That is just exactly what he looks like both on the court and off, does ncis Townsend Hunter, Davis Cup and Number Two in the present erican lawn tennis ranking. Five feet, t inches tall. Slender legs, large hips, quare torso, and a broad head sunk ween powerful shoulders. A hundred eighty pounds of sinew and muscle, t of it concentrated above the waist. rectly named: "Bulldog Hunter."

ly mind goes back to the first time nk Hunter appeared in the National nis Championships, about fifteen rs ago, when he was still a student at nell. In the opening round he had wn the national champion; at the nent, that aristocrat of the courts was sing in one of the locker rooms of the house.

How long will you be out there?" ied a friend.

Not very long," was the answer. n playing a college boy named Hun-

hree hours and a half later the na-al champion staggered up the steps to clubhouse more dead than alive. t he had anticipated as an easy match ed out to be a struggle for life; to win had had to give every last ounce of gy he possessed.

ow jump ahead fifteen years or so. are at Germantown, Philadelphia, re a deciding battle for the Davis Cup king place between France and the ed States. The previous day each had won a singles match. The score is all, and on the important doubles afternoon hangs the probable fate of Cup. Because of that fact, the Amer-side has been changed at the last nent and Frank Hunter is thrown pectedly into the fray beside Tilden, ace of Bill Johnston, to play against French. His first great international est and he is sent in at the end to pete with more experienced match ers! If he does badly, fourteen thou-critical spectators in the stands will e him for the loss of the Davis Cup.

e contest starts under a blazing sun. French players, Borotra and Brugnon, er him with shots. They ignore the ty Tilden and concentrate upon his er; three balls out of four are di-d toward the weaker man. Hunter s badly, he makes errors, the natural, table errors of nervousness; but as the match wears on, as a set is chalked up for France, he starts to find his touch, to play better.

Despite the terrific pounding to which he is subjected, despite the continual admonitions and exhortations of his teammate, as tense and nervous as himself, Frank somehow keeps up a stout and cheery heart when things are not going well. Slowly but surely his game improves, he hits harder and harder, until, in those frenzied and breathless seconds toward the end when every shot may mean the loss or capture of the Cup, it is Hunter and not Tilden who is making the winning strokes. Wherever the fight is the thickest, there he stands, meeting volley with volley and drive with drive. Feet apart, racquet clenched, teeth firmly shut, he puts all his body and all his will power into those last decisive points, steps into the ball with courage and determination, crashes it down the line past the agile Frenchmen at the net, or sends it zooming between them. And then, as Tilden, gaunt, weary, and tired, falls off and begins to make errors, it is his partner who rises to the breach and wins the battle for the United States. Once again for a brief respite the Cup is saved. Not for nothing is Frank called Bulldog Hunter!

THAT is Frank Hunter in the world of sport. There is a close analogy between his career in sport and his career in business. Tennis did not come easy to him; he had no natural aptitude for the game, no time for leisure and constant practice. Yet fifteen years ago he was an unknown boy in college; today he is one of the two leading players in the United States. So also in business Hunter started from scratch with no outside help. Today he is the president of a chain of fourteen suburban newspapers, a corporation involving several millions of dollars' worth of properties increasing in value every minute. Those very qualities which have made his name one to be reckoned with in the world of sport have also been the qualities to bring him to the front in a vastly different sphere of human activity.

Leaving college, Frank Hunter found a man's sized war going on. Characteristically, he jumped in immediately. In twelve months he was a lieutenant on Admiral Rodman's staff, on his flagship, the New York, doing patrol duty in the North Sea. During refitting periods the fleet put into Rosyth, Scotland, where the headquarters of Admiral Beatty, the Commander of the Grand Fleet, were situated. Now, it so happened that Beatty was an enthusiastic tennis player, and somehow he heard of Hunter, the young American lieutenant. From then on, Hunter played tennis with the Admiral whenever the squadron was in port. He defeated all the best players in the British navy and after the Armistice he won the Inter-Allied Championships in London.

IT'S a curious thing how in Frank Hunter's career the loss of one job has meant a better one. His wartime training got him a position with a shipping concern in New York, a steamship company that carried freight. Part of his duty was hustling for cargoes, and that also implied arranging for loans from banks in the city. He also spent two years for his company in London, where he was able to find time to play some of the best tennis of his life, once getting through to the finals at Wimbledon.

"I thought that was to be my last tennis," he says. "When I got home my job was gone!"

The shipping company had failed. But one of the big coal men who had met him while he was making contracts and arranging cargoes for the shipping concern, liked him well enough to give him the job of running a down-and-out, defunct newspaper in Beckley, West Virginia. Frank doesn't talk much about the two years he spent in West Virginia; others will. And they can explain how it was he managed to take a bankrupt property and convert it into a sound, paying proposition.

Ask Frank how he manages to be so good at tennis with so little time for practice, he says:

"Oh, I dunno. . . . I concentrate, I guess. . . . People waste a lot of time, one way and another. . . . When I go out to play, I play."

Likewise, when he works, he *works*. He worked those two years down in West Virginia. He worked so hard and so long that he actually began to pull the newspaper out of the red. He abolished the free list; he insisted on bills' being paid; he learned the business, spending time in every single department of the plant. For three weeks, while doing all his regular work, he managed a night shift on the presses from three in the morning until breakfast. Ask him why he did this and he'll say with a grin:

"So's I could talk to the trade."

CARTOON BY ROLLIN KIRBY

Why I Rebelled *Against* MY WIFE

I WISH to make it plain at the very start that I owe a great debt to my family. Without them I should probably be just what I was before my marriage—a traveling salesman of a decidedly mediocre type. I say this at once in order to remove any injustice that may seem to be implied in the title, and in order to protect myself from the appearance of being a grumbler and perhaps a cad.

Men are rightly suspicious of those who make public conversation about their own households. There are some things which a gentleman simply does not do, and one of them is to talk about his wife. If he has married unfortunately, if his home life is less happy than he had dreamed in the first enthusiasm of married life, it is assumed that he will bear the burden of his mistaken judgment like a man, and keep his mouth shut

We shy away from the man who, under the warming influence of the club or smoking car, shows an inclination to air his domestic woes. There is a weakness in his make-up somewhere. If he had really been strong and self-reliant he would have gone forward in his business despite anything that might have happened at his house. Thousands of men do go forward, carrying the burden of sick wives or useless sons or impecunious relatives, and they smile and say nothing. We admire such men. But for the weakling who complains: "I might have got somewhere if my wife and children had not held me back," we have nothing but contempt.

So I wish, if possible, to stay out of that class.

Indeed, I want to go farther, before proceeding to my personal story, and record my conviction that ninety per cent of married men—whether their marriages are ideally happy or not—are better off than bachelors and more likely to be successful in business.

Many men are molded by their wives, and one thing is sure: Men have done bigger jobs in the world when they have had wives to urge them on. So I take my hat off to wives at the beginning of this piece; and I hope that this attitude of genuine reverence will be remembered to my advantage if, later on, I seem to be saying things that are not quite so kind.

IT IS lately the fashion to scoff at the "mid-Victorian era," and express a lofty pity for the poor, unfortunate folks, like my father and mother, who were forced by its conventions to live, according to the scoffers, very narrow lives.

As I look back on my boyhood I get a different picture. If our lives were cramped and dull we certainly were not conscious of it then, nor do I have that feeling now. My father was one of those younger sons of New England who ventured West. A remarkably self-reliant individual, he was given to shaping his conduct according to his own conscience and was always confident that the Lord was on his side.

He ran a general store at which, he boasted, every want of normal human life could be supplied, from a bottle of soothing sirup to a tombstone. As a youngster, I clerked in the store and gained my first taste of the business of buying goods and selling them at a profit; also of sweeping out, making up bills, worrying about slow accounts, and working from seven-thirty in the morning until ten at night, and eleven on Saturdays. Father loved the life. When business was brisk he could handle more people in an hour, sending all of them away happy, than any other man I have ever seen. When it was slow, he sat in front of the store, his chair tipped back, smoking a large pipe and settling the affairs of the universe.

He dropped dead in the store one afternoon while I was away at college. When we went over the books, we found that if all the people who had owed him money were to pay it my mother would have about a hundred and fifty thousand dollars. But his heart had been too big for his judgment. Few of the debts were ever paid. Many were not even recorded. The poor and shiftless had lived off his bounty for years and, while they turned out *en masse* at his funeral, many of them promptly forgot their obligations. Fortunately for Mother, my two older brothers were already through school and doing well. One of them is a successful doctor and the other a mining engineer.

I THINK that if some writer wanted to record the biography of a typically good and successful American wife and mother he could hardly have a better subject than my mother. She, too, came of New England stock, and was teaching school in the little town when Father opened his store. She was cheerful, thrifty, a hard worker, and a wonderfully happy home influence. Father seldom needed cheering up, but when his occasional blue

ods descended upon him she never failed. She ked hard, but had no sickness that I can re- nber, and died at the ripe age of eighty-three. ather made the same speech to each of us boys n we left home to go to school: "My son, I ex- t to leave you very little money. But I leave my example as a sure guide to success. Find oman like your mother, and marry young. rest of life will take care of itself."

was good advice.

hortly after Father's death I found a job sell- groceries on the road. I had inherited my er's good nature and easy-going habits, with- much of either his or Mother's industry. For ral years I drifted along in a happy-go-lucky ion. My earnings were enough to give me a fortable room in a hotel when I came in off road. And between trips I enjoyed the city, t to the ball games, and lived a life without er worry or ambition.

NE afternoon in an overgrown village in Ohio I was closing an order with the owner of the cipal store when a charming young woman ted in. She glanced around with an air of rietorship, made straight for my customer, w her arms around his neck, and kissed him. umed that she must be his daughter, and the equent conversation, which related to her ediate need of twenty-five dollars, confirmed suspicion. I was introduced, and in five utes something had happened to me. Youth s a way to work rapidly in these matters. I overed how I could rearrange my route so as pend frequent Sundays in the town; and six ths later we were married.

thel was an only child. Her father offered to l a home for us if we would settle in town, and ted me to come into the business—a prospect h fitted in well enough with my easy-going s at that period. But she had very different itions. She wanted to get to the city, any the larger the better. So, amid much lament he part of her relatives, we set forth for mbus and established ourselves in a little e on the edge of the town. There we had the of buying furniture and making budgets; the l of little trips together; the mystery of ging our first youngster into the world—ex- ences that cast a lasting halo over life and are reward for all the cost of marriage, even if e be no other repayments.

he idea that two can live more cheaply than must have originated with somebody in the ding-ring or house-furnishing business. It is a d prevarication in one sense, but a truthful ement in another. For, while the expenses are e than doubled—or were in our case, at least— income showed an immediate spurt. I never ted so hard or so happily as in those first mar- years. I burned up the territory, and sent in rs in such volume that the company had to on raising my salary for fear somebody else ld hire me.

HOULD have been content to stay right there Columbus, saving a little money, enjoying amily, and taking life fairly easy; but Ethel's were set on New York. "That's where the incomes are made," she said. "That's the eague, and you belong in it. You're as smart ny of them. Why not take a chance and sure yourself against the leaders?"

e believed in me so completely that I began ve a little faith in myself. I decided to get to York somehow, and wasted a good many s in useless dreams and plans. It was at this d in my life that I learned one important ess truth: that oftentimes the surest way to omething that you want is to forget about it. may sound like nonsense, but business men ng my readers will (*Continued on page 48*)

If You Ask Me:

There are more ways than one of "carrying on"

As a boy, I used to edge closer when grown-ups shook their heads at the way someone was "carrying on." A neighbor was either misbehaving himself or else he was having a ripstaving good time. Discussion of either course of conduct would relieve a long winter evening, when board nails in the roof cracked with the cold and the wind wove snow-drifts up to the very eaves of the woodshed. . . .

Years went by. Many years. A great war laid its weary weight on the world. Again I heard those words: *Carrying on.* But what a new thrill they packed. Now they meant to keep going, breast forward, teeth gritted, with the light of an ideal in one's eyes. . . .

TODAY memories of the war are fading, as faded the fancies of a boy. In the city where I work, in the village where I live, in the places to which I go from time to time, I see more people than I knew were in the world back in the nineties. As I mingle with them, as I swap thoughts with them, I find that both kinds of "carrying on" are still in vogue.

But it's the first kind of which we hear and read most. From public print and public prattle you might think that we were all under the wheel of the great god Whoopee—that the only purpose of work is to snag the price of play—that to eat, drink, and be merry with all our might is a fit prelude to eternal extinction. There are plenty of people, I must admit, who act that way.

BUT they are the madcap minority, noisy and picturesque. They are the camp followers of a mighty army—the army of those for whom life smacks more of a crusade than of a crimson carrousel. That army is bivouacked in every last hamlet of America. Its soldiers are the men and women who, day in and day out, do their best with what life has given them; who, no matter how the game is going, are out there trying; who fight fair and hit hard as they go about the business of living; and who harbor the unparaded hope that they may leave their niche of the world a little better than they found it.

What soldiers they are! Defeat cannot daunt them, nor disaster crush them. Untouched by the ridicule of whoopee-makers or the precious patter of intellectual Pharisees, they march doggedly ahead. Death lies in wait just around the corner. *They carry on.* The riddle of eternity still mocks the mind of man. *They carry on.* Harvests blight, friends fail, loved ones die, dreams perish. *They carry on.*

And that's the kind of "carrying on" that counts.

Merle Crowell

ZANE GREY'S *Smashing New Serial*

THE DRIFT Fence

WHEN "little Molly Dunn" of the Cibeque met young Jim Traft at the rodeo ball in Flagerstown, they both knew that the hour of fate had struck. But they little dreamed of all the travail that was to follow. For young Jim was the nephew of old Jim Traft, richest rancher in the country and builder of the "Drift Fence," while Molly was the daughter of a "no-account" rancher—and sister to Arch Dunn, leader of the Cibeque gang. And the Cibeque gang had sworn to prevent completion of the hundred-mile drift fence, no matter how much bloodshed that might involve.

Old Jim had brought his nephew on from Missouri to head the Diamond outfit and oversee the building of the fence, which would be a boon to honest ranchers, but would protect the cattle, and thus take away a living from the Cibeque rustlers.

There had already been a meeting between young Jim and Arch. Arch, with his confederate, Seth Haverly, had ridden into the Diamond camp to warn them not to go on with the fence, had been ordered off by Jim, and had galloped away with threats of revenge. But this was not Jim's only trouble. The tough Diamond outfit, loyal to his uncle, but not keen about the fence building, regarded Jim with scorn as a "tenderfoot" and were determined to "break" him. It was in one of his despairing moods that he rode in to the rodeo at Flagerstown—and fell in love with Molly Dunn. Then he learned, to his horror, that the notorious "Slinger" Dunn, the man he had ordered from his camp, was Molly's brother!

What he could not know was the tragic depth of Molly's shame that her family was so worthless and her pitiful longing to *be* somebody—not just "Molly Dunn of the Cibeque," who lived in shabbiness and disgrace, but who scorned the advances of the Diamond boys and of such rough admirers as Seth Haverly and Andy Stoneham.

PART III

IT WAS Sunday, and Jim had returned to the Diamond camp, a bewildered and chastened young man. Except for Jeff, the cook, who was asleep under a tree, the camp was deserted. Jim went into the deep shade and quiet of the forest. There, out of chaos, his thoughts got some semblance of control over his emotions and some order in themselves.

All the other egregious tenderfoot blunders he had made could not, in the aggregate, sum up the magnitude of alienating Molly Dunn. He writhed under that. And always he would protest: Who could have imagined that lovely girl sister to a desperado, a gun-thrower, a killer, a rustler of the very brakes it was Jim's task to fence off from the range? Then, just as poignantly he would add: But what difference did it really make who was her brother; and why had he been so asinine as to distress and shame her with the connection?

He found excuse for himself for everything but that. It had struck him almost dumb at first to realize that he had lost his head and surely would have devoured her with kisses had she not brought him to his senses with a cutting slap across his mouth. That act, at once under the astounding dominance of her voluntary kiss—a strange, sweet little touch of cool lips—had lost its heinousness. In the light of the present hour, when it came to him that there had been genuine sincerity, the wild impetus of first love, he realized he had not much to be sorry for there. But she had not known that. How would she ever know? Not that knowing would change her! Her eyes haunted him. What a magnificent blaze! In them had been repeated the fire of Slinger Dunn's.

Why had Molly kissed him? Jim recalled her pitiful little confession, and that hurt him more than anything else. She was not what he had thought her, and she yearned to be. Most vivid of the things he recalled was the bitter reproach in her big eyes. Why had she reproached him? Not because he had unwittingly intimated a wide class distinction between Jim Traft and Molly Dunn. She knew she was Molly Dunn of the Cibeque. The reproach had come from a deep and terrible hurt.

Jim divined suddenly that maybe she too had fallen in love at first sight. The ecstasy of that was short-lived. It could not be true. His own state for weeks had been one of excitement, strain, growing to morbidness. Then a swift change to romance and sentiment had thrown him off his balance. He now sank as far into the depths as he had been lifted to the skies. All of which seemed only to add to the mystery and fascination and fatality of Molly Dunn. He discovered himself vainly trying to do battle against her own estimate of herself. Just a little backwoods girl to whom a white gown had added charm! But he soon scouted that. Molly Dunn had *innate charm.*

Through the pine trees he saw some of the cowboys returning from Flagerstown, and the considerable distance between them

Digitized by Google

W. H. D. KOERNER

d not drown sounds of their hilarity. Jim plumped down un-
r a pine, overcome by an entirely new and unforeseen prob-
ility. Some of the members of the Diamond had been at that
nce last night. Beyond the bounds of hope and reason was it
at they might not have seen him there with Molly Dunn.

ONG before the hour for supper, which Jeff had early on
Sunday, the cowboys rode into camp. Jim dragged himself
, and to the edge of the forest, only there bracing himself for
e ordeal. Somebody saw him coming. Did they maintain their
ual demeanor and pay no attention to him? They did not. To
s horror, they lined up on each side of the camp fire, and faced
m like a lot of grim judges.

"Howdy, boys, back early—I see," he said cheerfully, if
ltingly, "I changed my mind and went in to the *rodeo* yester-
ay. You sure gave me the treat of my life. I congratulate the
tfit on so many prizes. You can bet I was proud of you."

Not a murmur! He bent over to move a couple of billets on the newly started camp fire, solely to hide his face. Then he sauntered on toward the tree where he kept his pack and bed.

"Wal, boss, we heahed ya walked off with a prize yourself," called Bud Chalfack. "Some little blue-ribbon boy from Mizzourie!"

That sally of Bud's was greeted with uproarious mirth. Like a giant hand, it pulled Jim round. His cowboys presented a group of nine young men in varying stages of convulsions. The devil himself emanated from them. Jim choked back a sharp retort.

Then Cherry Winters, still quite drunk, staggered over to Jim, his red face a whole grin of impish delight, and he essayed to deliver what must have been intended for an important speech. But its manner of delivery, its incoherence, spurred Jim to a blunt "Get out!" and a hard shove. Cherry kept on staggering, this time backward, until he met with an obstacle in the shape of Jeff's woodpile.

He fell on this, toppled it over upon himself, and did not

They drove cattle in from the brakes and down the Cibeque, small

arise. The gang whooped. They had all been drinking and Bud looked pretty wobbly on his feet.

"Tenderfoot—haw! haw!" he bawled. "You got us—skinned to frazzle."

"Thanks, Bud, but I don't quite savvy," returned Jim.

"Boss, I shore—been savin' somethin' up," raved Bud, beside himself with maudlin emotion. "Th' outfit's all *heahed* aboot you last night. But I *seen* you. I ben—savin' it up!"

"You better keep saving it," warned Jim.

"Aw, boss, I couldn't think of thet. It's too orful good. I gotta tell the Diamond aboot it."

If Jim had any dignity left, it was that of the gathering might of fury. What did the little fool know? Jim resisted a fierce impulse to slap the gaping mouth. The cowboys clamored to hear. They sensed the long-hoped-for corraling of their tenderfoot foreman.

"Boss, I seen you on the porch," shouted Bud triumphantly. "Fellars, I seen our fastidious boss from Mizzourie huggin' thet little hussy—Molly Dunn!"

Before Jim realized what he was doing, he had leaped at Bud, to knock him also into the woodpile. The blow had been solid, and for the moment another of the Diamond was down and out.

Curly Prentiss jumped out from the circle, slamming his sombrero down with a smack.

"You two-faced Mizzourie gent!" he yelled. "Bud's my pard. I'm shore gonna lick you for thet."

"Bah! You bow-legged cow-puncher!" blazed Jim. "If you can't fight any better than you dance—you'll never lick me."

That hurt Curly more than the blow to his friend. He threw his scarf one way, his vest another, his gun-belt at Jackson Way, and then rid himself of chaps and spurs.

THE delay gave Jim time to collect his wits. But even that, and some semblance of coolness, did not mitigate his welcome of a battle with any or all of this confounded Diamond outfit. The incentive he needed had been miraculously forthcoming.

Curly gave a capital imitation of a bull about to charge, when he was detained by Uphill Frost.

"Hold on a minnit," yelled that individual impressively.

UNIVERSITY OF IOWA

unches and short drives that had a sinister significance to Molly

"Don't corral me, I'm gonna pulverize this gurl-huggin' fore-nan," replied Curly, swinging his arms.

"Shore, an' my money's on you, Curly, old buckaroo," said rost, holding up a hand stuffed with greenbacks.

THERE was a noisy scramble then among the cowboys to get money up on Curly. But it developed that not a single acker of Jim came forward.

"I'll take every bet," Jim declared.

"Whoopee!" yelled somebody, with an eye to fortune. "Give ny odds, boss?"

"Two to one," answered Jim. "But hurry. I want to get ıis over and have my supper."

"Atta boy, Curly!"

"Larrup him unmerciful!"

"You're fightin' fer the Diamond!"

When Curly came lumbering in, Jim stepped aside and hit m in the ribs. Curly whirled around and plunged, swinging. e delivered wide, sweeping blows that, if any of them had con-cted with Jim, would have fulfilled the hopes of the yelling Diamond. But they expended their strength on the empty air. In a couple of moments Jim became aware that Curly could not hit him. The cowboy was a wonder in a saddle, but on the ground he was lost.

After hitting Curly a few times here and there, Jim discovered a vulnerable spot in Curly's big, handsome nose. Wherefore Jim began to concentrate on that. He whacked it with his left. Soon the blood began to flow, and with it Curly's wild exuberance. Then Jim landed his right, and Curly sat down quite suddenly.

"Git up, you big cheese!" yelled Hack Jocelyn, and he did not mean to be funny. "Our money's on you!"

Curly responded to that trenchant call. In the ensuing few moments he showed that his spirit was willing but his flesh weak. After his third knockdown Curly merely sat up.

This time he was near Bud, who was also sitting up.

"My Lord, pard, hev we come to this?" cried Bud, evidently sober enough to realize. "What'd he hit me with?"

"I reckon it was a hoss-shoe," said Curly, feeling his swollen and bloody nose.

Anne Shriber

Anne Shriber's Pictures Appeal to the Heart

By JOHN WINKLER

"ANNA? Ann-nah!"

"Yes, Mrs. Detrick?"

"Have you made the beds?"

"Yes, Mrs. Detrick."

"All twelve of 'em?" (suspiciously).

"Yes, ma'am, and my own also."

"Very well"—querulously—"then you may come and eat your breakfast."

The scene was a rooming-house in one of the thickly populated districts of New York City. The time was the summer of 1922. A harassed landlady and Anna (later Anne) Shriber had become associated as a result of an advertisement placed in the New York Times a few days before: "Glad to do several hours' work daily in exchange for room and breakfast."

The room was in the attic. The breakfast was nothing to boast about. But Anne Shriber's purse was flatter, much flatter, than a sow's ear.

Yes, in those days, Anne Shriber was broke, but she clung to one idea so pluckily that now she maintains a suite of offices on Fifth Avenue, lives in a sunny, tastily-furnished apartment, and enjoys a fair income.

She has developed into a wizard at supplying photographs to fit the copy of advertisement writers. Now her clients include over two hundred insurance companies in America. Miss Shriber picks up her models on the street, in the subway, any- and everywhere. She costumes and poses them by sudden flashes of talent and "psychologizes" them into any required emotion or mood.

One morning, I watched Miss Shriber work with a tousled-haired, freckled-faced little boy named Jimmy, and the latter's curly-haired, blue-eyed younger sister, "Pat."

The camera was concealed behind a sheltering screen of palms, out of sight almost. Miss Shriber was laughing and chatting with the children. She put her arm about Jimmy's rough flannel shirt and said to Pat:

"Patsy dear, I feel sad today, and I am going to tell Jimmy a story that made me cry. Maybe you'd better go into the other room and play with your dolly. It wouldn't do for all to be crying at once"

Digitized by Google
Original from UNIVERSITY OF IOWA

"Please, Miss Shriber," volunteered the little girl, "I want ıear the story. I don't care *how* sad it is. I can cry too. I cry as well as Jimmy can."

"All right, dear, you may stay here," replied Miss Shriber, then she told the story—and later she told me that it was true, every word of it. There was a brutal janitor, so the y runs, in a city apartment house who was annoyed because cat was constantly having kittens. One day the janitor overed Mother Cat in the basement with a new litter of little baby kittens.

"The kittens were like cute little balls of fur," Miss ber's soft voice explained to the children. "Oh, you would e loved them, Patsy; so would you, Jimmy. But that al man was angry when he saw the mother cat was paying e attention to them than she was to her duty in the cellar. ourse, she couldn't catch any mice when she was nursing dear little baby kittens.

"So, what do you think the cruel janitor did? He took the ns and dashed their heads against the furnace, one by one, they were quite dead. Then he threw them out into the yard.

I was so surprised when I saw him do that that I couldn't e. The janitor struck a match and lit his pipe, and went airs.

When he had gone the mother cat looked at me so help- and hopelessly, I felt terrible too. Then the mother cat into the back yard and brought the dead kittens in one ne, and laid them at my feet, as much as to say, 'Look nat he did to my babies. Can't you do something?' Poor mother, of course she loved her babies."

Miss Shriber's eyes were wet and Patricia and Jimmy were ering. Jimmy's arm stole naturally about his little 's shoulder; there was an almost inaudible click of the ra—and another Anne Shriber "dramatized photograph" egistered.

ne of Miss Shriber's successful little models is Anita ault, now eight. The "dramatized photographer" dis- ed Anita on the street four years ago. Anita is a beautiful blonde, delicate, fragile, dainty. Anita and Anne (two ogether) just play and "pretend" at taking pictures. The : Some of the most engaging studies that have appeared advertising columns, and a sizable income for Anita and nother.

I can always make Anita laugh, down to the very toes of recounts Miss Shriber, "when I tell her a funny story."

NE SHRIBER was born in a frame shack in the poorer istricts of Cleveland, Ohio. Her father, Sam Shriber, was in Baden, Germany. He is still living at eighty-one, and

plied his trade as bricklayer until a few years ago. Her mother, née Johanna Martin, was also born in Germany. Mrs. Shriber is seventy-eight, and still insists on doing her own housework. Anne's brother William is a plumber. Her sister Louise is a trained nurse.

"We lived in the poorer sections of Cleveland," Miss Shriber says, quite simply. "My parents were literal fundamentalists. The Bible, phrase by phrase, was the word of God to them. Father gave a tenth of his income to the church, to foreign missions. We had family prayers morning and night and grace before each meal. Father would not let us spend a single penny for candy—every cent went for the heathen.

"From my very earliest recollections I loved pictures. In

UNIVERSITY OF IOWA

some way, when I was about ten, I became possessed of fifty cents—a great fortune. I had seen some beautiful pictures in the five-and-ten—two miles away. So, one Saturday afternoon, I walked to the Woolworth five-and-ten-cent store and bought five little pictures.

"I brought them home and hung them in our parlor, which was one of those forbidden places, used only on grand occasions. My father believed that pictures were 'idols' hung on the walls to be worshiped—so there were none in our home—for 'we worshiped God.' Each day I would sneak in and adore my beautiful pictures. One day they were gone! Instinctively I knew Father had found them, so I went to him. He took me by the hand and said, 'Come, I'll show you where they are,' and he led me to the old woodpile in the cellar, and there, scratched and torn to bits, lay my five beautiful pictures."

ANNA was graduated from grammar school at the head of her class. She was thirteen. That summer she became the humblest of sixteen servants in the home of William S. Harkness, Cleveland multimillionaire. She was kitchen maid at three dollars a week. Jennie, the cook, widowed Dutch woman with two children, taught her culinary science.

Next, thirteen-year-old Anna apprenticed herself to a dressmaker. For six months she labored without pay. To this day Miss Shriber despises sewing a seam. Then Anna decided to run away. Down on Huron Road, Cleveland, she noticed the windows of the Elliot-Fisher Company, where billing machines were demonstrated. She went to her friend, Mrs. Ruth Todd McGuire, of the near-by Gospel Church, and told her she planned to learn to operate a machine. Mrs. McGuire opened her home and her heart to the lonely child.

Next morning Anna went to R. B. Buswell, of Elliot-Fisher, and asked him for a chance to learn the operation of the billing machine. He was so impressed with the child's earnestness that he told her:

"I'll give you a key to the office, Anna. Come as early as you wish in the morning. Stay and practice as late as you like."

Ten days later, U. W. Hird, auditor of the Cleveland Plain Dealer, came to Manager Buswell and asked for an operator for a machine newly installed in the newspaper office. After Hird had left, Buswell summoned Anna.

"Child," he said, "I have been watching you. You can operate the machine. But I want you to look older than you really are. Do up your hair. Come with me. I'll help you buy a long dress. Tomorrow you go to work under Mr. Hird at nine dollars a week."

Nine dollars a week! A fortune! Anna made good from the start. At the end of a year she was in charge of the billing department at forty-five dollars a month. Hird took an interest in her and taught her bookkeeping. Mr. Buswell's company had developed a new bookkeeping machine, and two years later (Anna was now almost eighteen) her Cleveland patron sent for her, and said:

"Anna, I want you to go to Akron and demonstrate the new machine at

the Goodyear Rubber Company office. We will pay you a liberal salary and a commission."

Anna snapped at the opportunity. She spent six months in Akron. Goodyear purchased thirteen machines. Then, for six years, she demonstrated the new machine all over the Middle West.

"Here I enjoyed some wonderful contacts," she narrates. "And in this work I got another idea. I'd noticed it was very difficult for the stranger in a small town, or even a large city, to secure good living quarters. Years later, I returned to Cleveland and launched what I called the 'Best Service Bureau.' I opened an office and advertised in all the papers: 'Let us find you the right home; let us find

Digitized by Google Original from UNIVERSITY OF IOWA

u the right roomer.' The response was overwhelming. It s my first experience with matching human temperaments. it it was highly successful, and I made a tidy fortune. Later old this business.

"It was then a letter came from E. C. Riegel, a rotogravure ber I'd met in my travels. He was in New York, and wrote had a job for me. I arrived in New York two days before

istmas, 1920. While working for Mr. Riegel, I another idea: I thought it would be a good to get out house organs for retail stores. I rested Loeser's, Oppenheim-Collins, and a ber of out-of-town stores. My publications a success, though they didn't bring in much ey—for me. However, it was the first oppor- ty I had ever had of expressing myself in ing, layouts, and so on, and again I was happy. 'For these house organs, I sensed the value of l human-interest pictures, enticing pictures. ave an idea for a picture, would go to a reputable ographer and tell him what I wanted; but I d seldom get it. So I decided to make my own ographs by finding and posing my own models!

HE first photograph I 'directed' was a Thanks- giving picture showing two old folks giving ks. I discovered the old lady for this picture on the t in New York. She was a widow. My old man covered similarly. They were dears, did every- g I told them and were grateful to receive the dollars apiece I gave them. I used this picture e Thanksgiving issue of all my house organs, in number. The picture created quite a stir. store in Akron, Ohio, got six hundred letters of nendation.

Then I met little Anita Fremault. She was the first of my 'discoveries,' a wonderful child could express any and *every* mood at will. I used Anita on all my front covers. A few weeks after the appearance of Anita's first pictures, a prominent advertising man sent for me and asked, 'How do you manage to get such animation into your pictures?' I was fussed, but managed to reply that it was because Anita and I 'just played' at taking pictures.

"'Well,' said this gentleman, 'if you can do that you are wasting your time editing house organs.'

"So I came to a great decision. I determined to give up the job and devote my entire time and attention to making pictures. As quickly as my contracts for the house organs expired, I canceled them.

"Then my troubles began! My income stopped. I discovered there was a great deal of competition in the new field. I had paid a small sum for a down-town mailing address, and thought money would come rolling in. But it didn't. Soon I was flat broke, really broke. So I said to myself, 'Anne, you've either got to go home with your flag furled, or go back to fundamentals.' I had one or two crumpled dollar bills. I spent this money, most of it, for an advertisement in the New York Times offering to do part-time upstairs maid's work in return for a room and breakfast.

"I got a job in a rooming-house on the upper West Side of Manhattan—a room in the attic, and breakfast. Back where I'd started at thirteen! All that summer (1922) I made thirteen beds for my room and breakfast. Afternoons I tramped about soliciting clients. And, strangely enough, I had a funny feeling that at last I was on the road to fortune!"

And so it turned out. She took a room all her own; eventually opened her present office on Fifth Avenue, New York; incorporated, and for three years has solicited no business. Anna Shriber has arrived and she means to stay! (*The End*)

"When the Arctic Gets a Man

Major Anthony Fiala, explorer and outfitter of explorers, brought back from the Arctic some of the most thrilling memories and some of the greatest pictures that ever came down from the top of the earth. The pictures with this article were made by Major Fiala and illustrate various phases of his two expeditions into the North

So says ANTHONY FIALA *dangerous adventures in the ice happy memories and a longing to tropics, too," he says, "but the North*

By GEORGE W. GRAY

THE Arctic night ended in March. By July the ice broke up, freeing the ship from nine months' imprisonment. Then the America began to steam south, down a lead of open water that threaded the vast, drifting ice fields. With luck, Norway might be reached in eight days, and after that it seemed only a step across the Atlantic to New York, and home.

But the Arctic has ways of saying *No*. There came a shift in the wind, and the current quickened. The propeller rang like a bell as it struck the crowding ice. Up in the crow's nest, seventy feet above deck, eyes strained anxiously through the thick Arctic mist looking for the lead ahead that was fast closing. The pack ice snapped and crunched, like ferocious jaws impatient for their prey.

The temperature dropped; the floes drove closer together; the vessel groaned and trembled. Another squeeze wrenched the rudder and drove the ship hard over to starboard in a sharp list. There she froze in—a dark, leaning shadow in the cold gray immensity of ice and fog.

"Blast a way out," ordered the commander, and men got busy with explosives. But after two days a few blackened dents were all the difference that guncotton had made in the ten-foot ice around the ship. The pack consolidated into a cake about two miles across, a floating island in which was imbedded the helpless America.

ONE evening the photographer of the expedition followed the commander up to his cabin.

"Don't you think that bight on the southeast side of this ice cake has possibilities?" he suggested. "It notches in toward the ship for a couple of hundred feet."

"But we're a mile in from that," retorted the commander.

"Yes, but it's a chance, Commander. Let me take a few mines of guncotton down there and see if we can't blast a crack by working from the edge in toward the ship."

For answer the commander picked up the key to the powder magazine and threw it to the young man.

An hour later a deep boom told that the experiment was under way. And in three days a narrow channel half a mile long had been blasted into the ice cake; another day

Digitized by Google

It NEVER Turns Him Loose"

whose thrilling and lands have left him only go back. "I've tried the is where the lure is!"

or two ought to free the ship. Men were busily engaged in this campaign when suddenly the fog that had shrouded everything for days lifted.

"Look!" cried the ship's doctor, in a voice of horror.

The whole southern sea, dazzling in the sunlight, was one invincible front of ice—bergs, pinnacles, huge shapes like turrets and castles, all compacted into a massive floe that stretched into the horizon as far as the eye could reach. While the men watched, they saw the water that separated their ice island from his oncoming continent grow narrower.

The crash came in half an hour. One of the men who was on the ship said it sounded—and felt—as if a mountain had collapsed. The America lurched violently, rocked starboard to port and back, again and again, then floated on even keel. From the deck sounded broken hysterical shouts, "We're saved! Saved!"

The blow had split the ice in two, and the split followed precisely the line of the ship's keel. Through the widening lane between the two halves, the America escaped to open water. And during the next two weeks, by dodging icebergs, skirting huge floes, and pushing through the maze of leads, she navigated three hundred miles of pack ice, and by degrees worked back to green ocean, and land, and home.

This was the return, in August, 1902, of the Arctic expedition which had been sent north the previous summer by William Ziegler, the American millionaire. He had expended hundreds of thousands of dollars in outfitting the expedition—it was his hobby to sponsor polar exploration—and now immediately he announced that he would dispatch another expedition the following summer. The North Pole was to be the goal.

MR. ZIEGLER spent four months picking a leader. Some of the biggest names in Arctic exploration were considered. He called in members of the first expedition separately and invited their suggestions. The photographer, when his turn came, recommended a certain well-known polar explorer as his choice.

Digitized by Google
Original from
UNIVERSITY OF IOWA

"But *my* choice is *you*," answered the millionaire.

This photographer was Anthony Fiala. Today explorers everywhere know Fiala as an authority on the polar regions and the tropics. He has lived and adventured in both. Big-game hunters, prospectors, surveyors, explorers, and adventurers of all kinds come to him for advice and help in outfitting their expeditions. Colonel Theodore Roosevelt called on Fiala to equip his Brazilian expedition in 1913, and then took him along to make moving pictures in the great Amazonian wilderness. He has designed rifles, is an expert on firearms and explosives, and during the World War the Army authorities put him in charge of testing machine guns and ammunition for the A. E. F. But in all these interests and adventures, says Major Fiala, the Arctic comes first.

THE Fiala-Ziegler Expedition sailed in June, 1903—thirty-nine men, two hundred and eight dogs, and thirty Siberian ponies. Their last port of call was a tiny fishing village near the upper tip of Norway. There they stowed the last ton of coal that could be crammed aboard, and on July 10 Fiala turned his ship's prow toward the midnight sun. With all sails spread, riding gayly on a spanking breeze, the America disappeared over the rim of the earth.

She was last seen by a Norwegian fishing schooner steaming along the frozen front of Barents Sea. She had been riding thus for a week, burning precious coal, trying to find an opening. It was the fisherman's opinion that she would not get through—no vessel, he said, could possibly live in those murderous floes.

When July of 1904 came, Mr. Ziegler sent a relief ship on a search north. This vessel patrolled Barents Sea for two months, but was unable to break through the ice and returned in the fall without news of the explorers.

A second year passed; still no word. Newspapers began to talk of another Arctic disaster. A larger ship was chartered, and in late July, 1905, she succeeded in smashing through to desolate Franz Josef Land.

There the rescuers found Fiala and thirty-seven companions encamped on two frozen islands. One man had died the second summer, a victim of that strange Arctic anemia that fells even the huskiest when the cold and gloom of the six-months night eat into his blood and the gray desolation of ice and mists gets on his nerves.

AND what a story they brought back!—of shipwreck, forced marches through the Arctic darkness, encounters with blizzards and polar hurricanes, sledges splintered by monster pressure ridges, a retreat in the fog as the sea ice was breaking up under their very tents.

"Our plan," explained Major Fiala, "was to establish a base on Rudolf Island, the topmost land of the Franz Josef archipelago, and to start from there in the early spring on a dash for the Pole.

"We reached Rudolf Island after battling for forty-nine days through five hundred miles of ice. Such of it as was not covered by ice, was black basaltic rock. There was not a tree, not a shrub, not the least suggestion of a growing thing on it—nothing but the ruins of a camp that had been built there five years before by the Duke of the Abruzzi and his band of explorers.

"We pitched camp on a rocky ridge that rose thirty-five feet above the level of Teplitz Bay. With lumber brought from Norway we built a hut with bunks for fifteen men, a shelter for the animals, and three observing stations for our scientific instruments. These buildings were completed during September. Then we settled down for the winter.

"A thick ice foot projected all along our shore into the bay, and we moored the ship to this natural wharf, about a mile from the hut. By mid-October the sun disappeared for the winter. The darkness brought storms; the winds increased daily; and a week after night set in came our first blizzard—a snowstorm riding on a hurricane that registered seventy-two miles an hour on our wind gauge.

"The sharp Arctic snow burnt like sparks of fire when it hit the face. I had to lean against the wind to keep my balance. All of us rushed to shelter, the ship's officers and crew to the ship, members of the field department and I to our quarters in the hut.

"At 9 P. M. our little hut shook to the very iron that anchored it to the rock. Suddenly the light went out. It was an arc light, connected by wire with the ship and fed by the ship's dynamo. Our first thought in the darkness was that the hut was being carried away. But in a few moments, finding ourselves still right side down, we wondered what had happened to the ship.

"The wind was screaming now, and high above the screams were deep booms like artillery fire. One look into that shrieking, biting, blinding fury was enough. We could only wait until the storm quieted.

"WE WAITED twenty hours. Then, at the first lull, two of us ran down to the bay. No ship! The place where she had been moored was now a wild, choppy sea. We ran up and down flashing our lanterns, but not a gleam answered out of the thick darkness. Then the storm swooped down again and drove us home.

"From the hut we continued to flash signal lights. But the rising storm obliterated all seeing, and the howling blizzard raged without let-up for three more days.

"By the fourth day the storm spent itself, and in the twilight of noon the

merica came riding home from the cean. She was covered with ice from aterline to topmast, had lost an anchor nd seventy fathoms of chain, but otherise seemed no worse for her four days' attle. The men, though, were haggard. carcely one had had an hour's sleep.

ON THE first night, when the ship broke loose, the mooring lines caught the propeller blades. And while the ship as dancing to the frenzied tune of the urricane, men went down into the proeller well to cut loose the tangled, frozen ass.

"The temperature was below zero, the a repeatedly drenched them, they had be lowered on a line and relieved at equent intervals, but they freed the opeller. This was one of many harrowg tales of that wild drift in the darkness.

"I felt that I ought to be with the ship any future trouble," said Fiala, "so I w transferred from the hut back to y old cabin on the America.

"The bay froze over, and thick ice cked us in on all sides. This was to be pected with winter. The America was old whaling ship, armored with tough enheart, built to withstand the ice. A y heavily crusted over should protect her from the pressure of the Arctic currents—so we thought.

"The frozen but restless ocean soon began to push and crowd. There were days when the ship creaked and trembled for hours under the pressure of the ice. We were anxious. We slept by fits and starts. One night I was awakened by a weight on my breast and jumped up as the ship gave a violent lurch. When I snapped on the light it was to see the Captain's dog Moses, with his forepaws up on my bed, his great black eyes beseeching me to arise.

"I hurried on deck. The whole field of ice to seaward was tumbling, heaving, billowing. And this ice was five to ten feet thick. In the ghostly light I could see it move, furrowing in enormous folds which cracked like gunfire as they broke and tossed up great blocks.

"THERE sounded from below a terrible shriek of breaking timbers. 'He's got his teeth in us at last,' growled Captain Coffin.

"'Call all hands,' I ordered, and the engineer touched the electric switch which signaled the hut. The second officer fired three rockets in rapid succession.

"In the rockets' glare," said Fiala, "we saw more plainly what was preparing for us. A great pressure ridge, where the unbending crust broke and burst into splinters and blocks of ice, was still rising just off our bow. Another was upheaving a hundred feet (*Continued on page 157*)

The Sins of the Fathers—

Dot demonstrates that truth is mighty—and that there is more than one way to make it prevail

By

FANNIE KILBOURNE

Illustrated by T. K. HANNA

LIFE in a town like Montrose does certainly make some queer combinations. Nobody could have dreamed that Sue Weller's life was going to be affected, one way or another, by the home motion-picture camera that Mrs. Frank Kirsted's father sent her for a present. In fact, nobody even knew that Sue was in town the evening that the Kirsteds invited quite a bunch of us in to look at their films.

They'd taken pictures of Frankie's birthday party that all our children had been at, so of course we were all crazy to see them. I hadn't stayed through the party, myself, but the twins had looked so adorable when I left them there in their white linen brother-and-sister suits, that I settled down to watch the films with very pleasant anticipation. The living-room was crowded and Rosie Merton and I drew the piano bench to sit on.

There seem to be a great many preliminaries to showing homemade movies, but I didn't mind—just sat thinking of seeing Jack's darling, friendly little smile and the one blond curl that always sticks straight up on top of Jill's head.

It took a little time to get the screen adjusted. Then, one roll of film went haywire all over the floor, and it took both Frank and Marian some time to get it wound back right. We all sat and made polite, waiting conversation.

AT LAST, everything was ready, the lights were turned off, there was a buzzing, clicking sound, and a square of white light appeared on the screen.

"This," Mrs. Kirsted explained, "is the film that came with the camera so you can see how the pictures ought to look."

I suppose it was an all right enough little film but, impatient as I was to see the twins, I wished that they had omitted the preliminaries.

At last, however, it was over.

"Now, here," said Mrs. Kirsted triumphantly, "is the film we took on our vacation."

Rosie and I stirred impatiently on the piano bench. A seat without a back gets uncomfortable so soon. I suppose the vacation film was all right enough, too, if you happened to be interested in the Kirsteds' vacation. But as I'd never seen any of the crowd before, I found it kind of slow going.

At last, however, it was over too, and we sighed in relief, thinking that now we were going to see our children. There was the long pause while they ran the vacation film back onto the spools, or whatever it is they do, and got another ready. Finally the lights went out again.

"This," said Mrs. Kirsted, "is the film Frank took at the Porter Company's convention."

Honestly, that was going too far. All over the living-room you could hear creaks as people settled back disappointedly in their chairs. Rosie and I could have told them they were lucky to have chairs with

I was afraid for Robbie, too. I'd fixed it for him for a year, but after that—

acks to settle against. I was beginning get curvature of the spine on that bench. But the fun that Frank got out of showg us the convention!

"Of course, you don't any of you know ese people," he explained, "but they're dandy bunch. Delegates from all over ree states. See that big fellow—he's om St. Paul and a perfect card. He d the crowd roaring all the time. And at short one with the straw hat—he's ate sales manager—and the one with the l—they're from Des Moines—and—" onestly, I never hope to live to be so red again.

UT at last our patience was rewarded. About ten o'clock and just before my ck was due to break entirely, the film shed on the screen. It had a beautiful e, all in old-English letters with a fancy rder: "Frankie's Birthday." The stirgs and coughings ceased, you could rly feel parents coming to life all over room.

'Frankie Gets up on His Birthday orning" the first caption read. And we tched Frankie sit up in his crib and n climb out. It was Frankie's sixth thday morning—which is past all the e, funny, baby age—and Frankie is of the most unattractive children that r lived, anyway. A spoiled little smart k.

I should worry if Frankie never got in the morning," Rosie whispered in ear, and I certainly agreed with her.

Then we had "Frankie Eats His Breakfast" and "Frankie Starts for Kindergarten" and "Frankie Comes Home for His Dinner" and "Frankie Gets up from His Nap," which was considerably like "Frankie Gets up in the Morning." At last, just as we were all ready to kill Frankie by any slow and painful method, came: "Frankie Greets His Party Guests."

Nobody knew whose child had arrived first, so we all leaned forward in suspense. Honestly if I hadn't seen it with my own eyes I wouldn't have believed it. There, big in the center of the film, was Frankie shaking hands. And in order to get Frankie large and plain in the very middle of the camera, the guest was cut off altogether. There was that unbearable Frankie grinning and shaking hands with a fat little arm that went off into blank silver screen at the elbow. One child after another arrived but all we saw was Frankie shaking hands.

Then there was "The Birthday Party Plays Drop-the-Handkerchief"—Frankie tearing around with a handkerchief and a circle of little backs that disappeared before you could tell one from another. And "The Birthday Party Pins the Tail on the Donkey"—Frankie blindfolded and filling the whole picture, of course. There was one final picture that did show all the children around the table, but they all had on paper caps and before I had time to pick out the twins the picture flashed off and we had "Frankie Goes to Bed. Goodnight, Birthday Boy, and Happy Dreams!"

If there hadn't been such a crowd, I could have cried from sheer disappointment. To think of breaking your back for over two hours on a piano bench for that!

And all the lovely things that could be done with a home motion-picture camera!

WHEN Miss Prescott, who is a rich old maid and always getting up civic things in Montrose—pageants and Community Sings and Take-Your-Child-to-the-Dentist Week and everything like that—when Miss Prescott approached me to work on a motion picture to be called "Our Montrose—Then and Now" and said that Mr. Frank Kirsted had generously offered the use of his motion-picture camera, my first thought was to say might I never see Mr. Frank Kirsted's motion-picture camera again. However, I thought better of this as she talked on.

The camera was a very fine one—Mrs. Kirsted's father never sends anything but the best—and Miss Prescott said we could take a picture that could be shown at the Country Club and in the Masonic Hall and a few places like that, to make money for some charity, and then it could be sealed up and put away in the town archives—whatever they are.

On second thought, that didn't sound so bad. In fact, it gave me rather a thrill to think of people maybe a hundred years from now, unsealing that film and looking for instance at the playground scene and saying, "Who is that adorable little blond girl?" And it would be Jill.

Sue was following Ed and Bobbie with her eyes and had one hand out as though to draw them back

Digitized by Google Original from UNIVERSITY OF IOWA

I was put on the Historical Committee to look up typical old scenes, but I was interested in the today part, just as much. Of course, the new Children's Playground had to be got in. Montrose might be said hardly to need a public playground, nearly everybody having yards, but when Mr. Burris offered to donate the land for one, the Chamber of Commerce and the Boost Montrose Club and all the other organizations got together to fit it up with swings and seesaws and whirligigs. It was forward-looking, as Will said, and very good publicity for the town.

JACK and Jill hardly ever go there—they're a little too young and it's too far from our house—but naturally I took them over the day the pictures were to be taken there. So did every other mother in town. Honestly, it was like old home week, you ran into everybody you knew.

I was helping get a lot of children together for a picture around the swings when I noticed a little boy, three years old or so, that I didn't recognize, off at one side.

"Get over closer to the other children, sonny," I told him, "so you'll be in the picture."

"Oh, can I be in it, too?" he asked, seeming surprised.

And when I said, "Of course," he streaked over to a swing as though he was tickled to death. He was a cute, thin-legged, big-eyed little fellow. Not being able to place him, I'd have thought he was one of the poor children from the other side of the tracks only that he was so clean and well dressed. He had on the cutest little white piqué suit with a red tie, and even his knees were shining clean.

My speaking to him seemed to make him think I owned the playground, because a little later he hunted me up and asked me if he could play on the seesaw.

"Why, of course, honey, if your mother lets you. The playground is public; it belongs part to you."

"To me?" he asked. And when I repeated that it did, he said, "Can I walk anywhere I want to? And touch anything I want to?"

As anyone who has ever taken a three-year-old child into anybody else's house knows, that is a very unusual attitude; but beyond thinking how restful it must have been for his mother, I didn't give it a second thought. And I might not have thought about it again if I hadn't happened to see him when the ladies from the Water Street Church were giving out lollipops. That was for a picture, and the children certainly entered into it with enthusiasm. To my surprise, I saw the same little boy hanging off to one side.

"Why don't you get your lollipop?" I asked.

"Is one for me?" he exclaimed, as if he'd never thought of such a thing, though all the other children were fairly knocking each other over to get theirs.

When he came back with a big red one in his mouth, I asked, "What's your name, little boy?"

"Robbie," he said. And before I had time to ask "Robbie who?" he added, "I'm Sue Weller's child."

That placed him, of course, though I'd never known Sue very well. She was a little younger than I and lived way up on Somers Street. She'd left Montrose to work in Chicago three or four years ago, and though I had seen in the Monitor just the other day that she had returned to make her home with her mother, I couldn't recall her married name and I hadn't even known she had a child. So, "Robbie what?" I asked.

"Robbie Sloane," the little boy said. "We got chickens at Grandma's. Have you got chickens at your house?"

I said we hadn't chickens but we had a kitty, and for a minute or two carried on the kind of conversation you do with a three-year-old.

When I was telling Will about the afternoon at supper-time, I told him about Robbie, among other things, and I recalled that funny little phrase, "I'm Sue Weller's child." It seemed such an odd way for such a baby to speak of himself.

However, I didn't have any time to think about little boys with good manners the next two or three weeks. The Montrose Now Committee had a cinch, compared with us on the Montrose Then. All the Nows had to do was to arrange for pictures of the new hotel and the post office, and recess at the public school, and Main Street during the noon hour, and the Boost Montrose Club picnic at Woodhill Park and such things. All the merchants were tickled to death to help—it was good advertising. But, boy, how the Montrose Then Committee had to dig!

It was decided to get parallel pictures to the Nows whenever we could, and we wanted them as accurate as we could get. Some were easy enough. To go with the post-office picture, it was simple to get a picture of a man in a coonskin cap, with saddlebags, on horseback, supposed to be riding along the Pike from Verblen. There are plenty of dirt roads that haven't changed much since pioneer days. And the costumes weren't so hard to get—most families could find something stored away in their attics—but collecting them and dressing the right people in them, and so on, took an awful lot of time.

Somebody remembered that the old first hotel in Montrose, that had stood on Main Street where the new one was now, had been moved over on the other side of the tracks, and we found that it was still standing, being used for a Hunky boarding-house. So we were working out some sort of little scene to get that in. Take it altogether, it was one active time for me.

Of course, the twins' fifth birthday had to come in the midst of it, and I had to give a party for them. Busy as I was, I should never have remembered to ask Robbie Sloane if I hadn't happened to run into him and Sue in the Busy Bee grocery. I heard a little voice say, "Look, Mommie, there's the lady that owns the playground."

I HAD a pleasant chat with Sue, though I was a little surprised in her. I hadn't recalled that she was so stiff and shy. I said all the polite things, how terribly sad it was that she had been left a widow, how glad we were she'd come back to Montrose to live, and what a darling Robbie was. Then I asked her if she wouldn't let Robbie come to the twins' party the next day.

My, but I was glad I happened to think of it. I've never seen anything like the happy way her face lighted up. It really seemed all out of proportion. A child's birthday party is all very nice, but goodness knows it's not such a very thrilling social occasion. I asked Sue to come with Robbie—lots of the girls do—but she said she couldn't. She'd bring him and leave him, though.

"Well, come after him early enough to have a piece of birthday cake, then," I invited her. "There'll be some of the girls you used to know; they'll be awfully glad to see you."

Sue acted queer, almost as though I'd scared her.

"I'm afraid I won't be able to get there till just time to bring Robbie home," she said. "What time will the party be all over?"

That struck me as odd. When she didn't even know what time the party would be over, how could she be so sure she couldn't get there before it? However, I said, "Oh, about half past five," and let it go at that. If Sue didn't want to come to the party, it was nothing to me. I was just trying to be friendly and hospitable.

SHE didn't come inside the yard with Robbie the next afternoon—just brought him to the edge of the lawn and practically pushed him in and hurried off down the street. Robbie was so shining clean you could almost see your face in him, and looked too dear for anything in a crisp blue linen suit. There's something almost unbearably sweet to me about any tiny boy with his hair cut all severe like a man's and yet soft little baby hands.

Robbie had brought each of the twins a birthday present, such expensive presents that I felt almost embarrassed—a huge set of stone building blocks for Jack and a big doll, beautifully dressed, for Jill. They'd both come from Father's store and I happened to know how much they cost. I was really shocked. Even if Sue was rich enough to afford such presents, it was so unnecessary. They were lovely, though, all wrapped in tissue paper with pretty, bright-colored cards—"Happy Birthday to Jack from Robbie," "Happy Birthday to Jill from Robbie."

Robbie had the nicest manners I've ever seen; all the girls spoke about what a sweet little fellow he was. Frankie Kirsted seemed like a wild hyena compared with him. While refreshments were being served, I had to leave for a minute to talk to a man Will had sent.

He was a pleasant-faced young fellow, and when he asked me if I didn't remember Ed Gardner, I could recognize something vaguely familiar about him. It was very vague, though. Ed Gardner had lived in Montrose till he was ten or so, but he had been at least five years older than I was, and at five and ten, that puts people in totally different social classes. Ed had left, years ago, with his mother and was back, now, to close up his grandfather's estate. Old Mr. Gardner had died that spring somewhere in his nineties. He had left a little real estate, and Ed had been seeing Will about disposing of it.

He had happened to mention that his grandfather had always kept a diary and that the early ones went 'way back. Will, recalling the desperate time the Montrose Then Committee was having getting material, had asked Ed to let us read the diaries and Ed had brought me a half dozen books. He said they were full of details of the early days of the town.

I could hardly wait for the birthday

Mrs. Burris looked straight at me. "What do you want," she asked, "to keep your mouth shut?"

rty to go home, to get at them. Sue eller was the last mother to come for her ild, and Ed Gardner played with Rob- and the twins while we waited. When e came, I introduced Ed, and he said last time he'd seen Sue, she was about bbie's age. He walked down the street th her and Robbie and, watching them t of sight, it occurred to me that that uld be a good match, Ed seeming so d of Robbie and having done very well t in Vancouver, Will said. I can't say, wever, that it looked like a very likely tch. Sue certainly didn't have the tra- ional widow's charm. She was stiff as a el fishing rod.

Anyway, I had very little leisure for nning matches for Sue Weller the next or three weeks. The Merchants' As- iation had agreed to build a false front lica of old Main Street at Summer cor- and we were all busier than one-armed er hangers.

did see Robbie once in a while, in the cery with Sue or at the playground, I decided that I'd imagined that ut his seeming pathetic. Either that or bbie was changing. He seemed to have mped up a little and was as gay and sy and full of life as any of the other dren. He would come up and take d of my hand, if I happened to walk g a bit with them, in the friendliest, most trusting way in the world. Sue would forget to be stiff then and would fairly beam—I don't think I ever saw a mother so crazy about a child.

I RAN into her one afternoon in the Busy Bee when we both happened to be alone —the twins were at mother's and Sue had left Robbie at the playground. She was on her way to call for him and we walked along together. She seemed to want to talk just about Robbie, but this didn't make me tired the way it does when Mrs. Kirsted insists upon reporting all the cute things Frankie says and does. It seemed, in a funny way, as though Sue was pleading for Robbie, as though she was trying to make me believe he was a nice little boy. Which, goodness knows, she didn't have to do with me. I kept assuring her I thought he was a darling.

As we passed Will's office, Ed Gardner was just coming out, and he walked along with us, too, talking about his grandfather's diaries, asking me if I'd like to see any for the other years.

We all paused for a few moments outside the playground, looking at the children. I've never seen anything to equal the way Sue always kept Robbie so clean. I told her it seemed supernatural to me. I spotted him right away, among all the children, just by picking the most spick-and-span youngster in the whole lot.

The only one who could approach him was little Vincent Burris. I couldn't understand what Vincent Burris was doing in the public playground. Ever since his father married that Chicago girl, they've been simply too elegant and exclusive for words. Vincent Burris is the only child in town who has a regular nurse in uniform.

Glancing about, we spotted the uniform now over on the park side, on a bench by Harry Spotwood, who's our handsomest policeman. So that was why little Vincent was playing with ordinary children. Robbie was running around, all red-cheeked and excited. We heard Vincent, who was six years old and accordingly leading the games, call, "Now, everybody come over by the fence." And we saw Robbie run along with the rest.

Suddenly Vincent turned around.

"Everybody but Robbie Sloane," he said. "Robbie Sloane can't play!"

I expected Robbie to raise a howl of anger and protest as any of our other children would do. But, to my surprise, he stopped short, turned, and came trotting over toward us. And he didn't look angry or even puzzled so much as just disappointed. As though he'd really known all the time he wouldn't be let to play for long.

"Hey, there, (*Continued on page 107*)

Oh, how Joe's boarders yell when they hear the dinner bell from this dining-room

Joe Jones Pastures Dudes on His Ranch

Joe ready to corral his dudes for an outing

JOE JONES is the owner of one of the oldest and biggest "dude" ranches in the West. For twenty-two years, he has made a business of giving Easterners the thrill of shooting grizzlies in their native Rocky Mountains, of tracking deer through the snow in midsummer, and of roughing it generally in that wildly beautiful section of Wyoming which lies within a day's journey from the northeast boundary of Yellowstone Park.

I met him in New York City, where he had come on business, but I knew at once that a windswept plain or a hazardous mountain trail was the proper background for Joe. Indeed, you can't look at him without glancing around for a horse to complete the picture.

His eyes, startlingly blue in a face tanned by a lifetime of exposure on the open range, have the look of one who is accustomed to far horizons. His legs are slightly bowed, as befits the legs of a man who spends most of his waking hours in the saddle. At home or abroad, he wears high-heeled Spanish boots, handsomely embroidered and finished off at the top with a tassel.

Joe was born to live outdoors.

I asked him how he happened to go into the business of "dude" ranching.

"Well," he told me, his lips twisting into a humorous grin, "it come about this-a-way: Twenty-odd years ago, when I was still little more than a yearling cowboy, folks from the East was a-gitting the notion that there was a sight of fun to be had vacationing on a ranch. So many of 'em come a-visiting that some of us ranchers decided maybe they would be willing to pay for their fun. They sure was! It wa'n't a bit of trouble signing up customers from the jump.

"I had a little money saved up from trapping and herding, so I set out from Oregon, where I was born and growed up, to look for a likely place to homestead. I found it in the east of Wyoming. I put me up a house, added half a dozen saddle hosses to my outfit, and hired some extra cowboys. We herded some cows and sheep, but our main business from the start was putting up 'dudes.'

"We had no trouble gitting customers. Our first season, we had seventy-odd folks staying at Majo ranch, as I call my place. Nowadays, we can entertain from three to four hundred during the season, which generally runs from May to October. Most of our guests average two or three weeks, but some of 'em stay a month or more. Many of them come back year after year. I have one man, a big banker, who has been with us eight seasons running.

"We've got fourteen cabins now. They're scattered about under the trees in what we call the 'dude pasture.' Matter of fact, the dudes don't feed there a-tall; everybody eats at the central dining-room. We got a big assembly-room, too, where the folks git together to listen to the radio and to swap yarns about that big grizzly they jest missed yesterday.

"Most of the time we're on the trail. Even during midsummer we have to wear heavy clothes and carry plenty of blankets. The ranch is nearly 7,000 feet above sea level, and our hunting trips often take

Digitized by Google Original from UNIVERSITY OF IOWA

us up to the timber line. It's nothing for us to camp out at an elevation of 11,000 feet or more. A few summers ago we had a ten-inch snow in July, and last summer we had a big snowstorm in August.

"You may be surprised to hear that women are often easier to handle on a ranch than men. They're willing to acknowledge that they don't know much about hosses and camping out. They usually learn faster, too.

"Men are a mite inclined to let on that they know more than they do. Even if they never stepped foot in a stirrup in their lives, they hate to admit that they're plumb ignorant about critters.

"Some folks are surprised to hear that there's still plenty of big game in the Rockies. Matter of fact, there are more grizzlies and other species of bear today than there was twenty years ago. Trapping was what killed off the bear population, and trapping ain't been allowed in fifteen years. The hunting season is limited to a few months in the spring and fall. That favors the bears, too. Last season we got twenty-nine bucks and eight grizzlies, not to mention brown bears. Also, last season, we got the record moose ever dropped in Wyoming.

"In 1913, a big grizzly come mighty near gitting me. I was guiding a doctor friend of mine from New York. He was anxious to git a grizzly, so one afternoon when we tracked a big one and her two cubs to a snow-covered ridge, I pushed Doc ahead to get first shot.

"Soon as the old grizzly seen us, she r'ared up on her hind legs to git a good view of the situation. Then, with a blood-curdling growl, she dropped back on all fours and charged the Doc. Right away I saw something was wrong with Doc's gun and that I would have to come to the rescue. Stepping backward to get a good aim, I fell sprawling into a snowdrift.

"Lucky for Doc, the bear was coming so fast she couldn't stop where she aimed to. Then she caught sight of me, and lunged straight in my direction. As she hurtled past me, carried down the steep mountainside by her own momentum, she took a side-swipe at my right leg, which was sticking out of the snow.

"I struggled up and followed her for sixty yards before I got a fair aim at her. In the meantime, Doc had unjammed his gun and got the two cubs. That was a pretty hot five minutes, all told!"

MILDRED HARRINGTON

This American Boy Violinist Took America and Europe by Storm

KEYSTONE VIEW CO.

Twelve years of age, and numbered among the great violinists of the world, Yehudi Menuhin remains a sturdy, healthy, normal American boy

AN INFANT sat on his father's lap under the rafters of San Francisco's Civic Auditorium. It was a symphony concert. But the two-year-old neither slept nor cried nor chewed a stick of candy. His baby eyes were fixed on the musicians, and head and body swayed to the rhythm of the orchestra.

Eight years later, this same infant, now grown into a little lad of ten, stood on the concert platform in staid old Carnegie Hall, New York City. When the last golden notes from his violin had died away, the dignity of Manhattan crashed under a storm of unprecedented acclaim. The chubby youngster bowed awkwardly as the thunderous applause rolled toward the stage. Twelve times he was recalled. After a demonstration lasting fifteen minutes, people from all over the hall surged in a great wave toward the platform, so that they could see at closer range this marvelous young genius. Men and women kissed him. They pounded him on his back. They hoisted him on their shoulders and shouted his name over and over again.

"Yehudi Menuhin! Yehudi! Yehudi!"

Wherever Yehudi Menuhin has played that stirring scene in New York has been duplicated. Even the Europe that smiles rather scornfully at "mechanistic America" bowed its head before the superb artistry of this product of our subways and skyscrapers. And nations that gave Ysaye, Kreisler, Elman, Zimbalist, and Heifetz pay tribute to this American boy, who, at the age of twelve, has won his place among the world's great violinists.

Yehudi Menuhin—his name means "The Jew bringing peace"—was born in New York City, January 22, 1917. But when he was only a few months old his parents moved to Berkeley, California.

Both his father and mother were passionately fond of music; and for the very good reason that they had no one to leave little Yehudi with, he was carried each Sunday to the symphony concerts in San Francisco. There his baby eyes were glued on Louis Persinger, the first violinist, and his baby hands vigorously applauded his solos.

When Yehudi's grandmother in distant Palestine learned that her little grandson—because of the horrible sounds it made—had smashed a toy violin that his parents bought him, she sent him a real violin. By exercising the utmost economy his parents were able to pay for lessons. Inside of three months, at the ripe age of four, Yehudi was playing classical numbers.

Within a year he made his first public appearance at a children's concert. The critics eulogized him. His parents yielded to his repeated entreaties to secure as his instructor Louis Persinger, the artist who had been his babyhood's idol.

With Persinger as his teacher the little fellow buckled down manfully to real study, and for four years, while his genius was being perfected and his mind trained, the main occupation of his parents was turning down the most intriguing offers from those who wished to exploit the lad's genius and youth.

"Yehudi is not for sale," briefly declared his father.

Following that sensible policy, Yehudi's public appearances were restricted to twelve in all up to two years ago, and for none of them did he receive recompense. Those twelve recitals gave the lad perfect assurance, but did not rob him of health or normal childhood, possessions more valued by his parents than sudden wealth.

I went to see the Menuhins in their old-fashioned house in San Francisco. For all Yehudi's money—he now receives

Digitized by Google Original from UNIVERSITY OF IOWA

enormous fees for his playing—they are still plain people. That accounts for the unaffectedness of the boy-artist on the concert platform. Simplicity is the keynote of his life. He eats abundantly of plain food and tumbles into bed at half past eight every night for a full ten-hours' sleep. Nerves? Even after more than two years of public adulation both at home and in Europe, he doesn't know the meaning of them. For there is nothing of the Bohemian about this young artist. He is the grandson of an ascetic rabbi and he walks always in the shadow of the synagogue, keeping the fasts and saying his prayers.

Every day he spends three hours in the open air romping with his sisters, Yaltah and Hepzibah, or rubbing elbows with youngsters of all classes and colors on the public playground. On Sundays he is piled into the family car—a four-seater of popular make—for pilgrimages to California's famous beauty spots.

No wonder that he is just plain, healthy boy!

Never in his life has Yehudi been in a classroom. Yet he is five years ahead of the average student of equal age. He speaks and reads three languages, delights in poetry, and for recreation reads classical literature.

At first his parents, graduates in pedagogy from New York University, taught him. Now eight tutors come daily to instruct him and his sisters.

Perfect concentration is the secret of his accomplishment. In his music he loses himself. Every morning he shuts himself up in his room and practices for three hours. No one—including even his parents—is permitted to disturb him. At the end he is as fresh and enthusiastic as at the start.

Last March this husky, roly-poly lad started for another triumphal concert tour of Europe, and with him went the most precious gift that he has ever received—a Stradivarius violin valued at $60,000, which was given to him by an admirer on his twelfth birthday.

GERALD J. O'GARA

Take It from Peggy the World's Gone Guppyi

SANDWICHED between an express office and a candy store is one of the smallest and most unusual pet shops in New York City. In the window, dozing in the sun, sits a South American parrot, canaries swing in their cages, paradise fish and guppyis dart in and out through the plants of their aquariums, and turtles clamber over one another in a large glass bowl. Inside are more parrots, more canaries, more fish, a long counter, and a small, back-room dispensary. This constitutes Peggy's Pet Shop, devoted entirely to birds and fish.

As little Peggy Gay, living near Lexington, Kentucky, the owner of this unique shop was always surrounded by pets, and when her favorite canary broke its leg she set it herself. This operation was the beginning of her study of avian ailments and of avian surgery, of which even today few veterinaries have a working knowledge.

In her teens, Peggy was sent to New York to a finishing school, and, like many other girls, stayed to seek a career. The career at first took the form of marriage to a young American of German extraction, by the name of von der Goltz. He also was a great lover of animals, and together they moved to a farm on Long Island, where they raised chickens, geese, fish, and parrakeets. When, a couple of years later, they sold the farm and moved into town, they found that fifty shell parrakeets, several aquariums of gold and tropical fish, a dog, and a cat were somewhat too many pets for an apartment.

"Why not start a pet shop?" Peggy's husband suggested.

Peggy considered the proposition, and finally the pet shop was established.

Peggy talking with the temperamental parrot who must have her mashed potatoes

"I take in bird boarders," she told me, "and I also doctor sick ones. Two of my parrot boarders love soda crackers. A new parrot fom South Africa saw me feeding them and begged for a cracker. I gave him one. He liked it so well I gave him another, then another. The next morning I found him dead. As he was not sufficiently acclimated to digest the food, the crackers had formed an impact in his crop.

"Most parrots," Peggy went on, "arrive at pet shops in a terrible condition. They have been badly fed en route to this country. The ideal diet for a parrot is sunflower seed, a little white bread, and fruit. On this he can live to be one hundred years old. Of course, we do not try to change the food of our boarding parrots, provided they are healthy. One of our boarders demands mashed potatoes every day. We would find it impossible to live with her if we refused her.

"I find parrots as intelligent and as affectionate as dogs, although some people who have had a parrot suddenly bite their mouths may doubt this. There's a reason for this capriciousness. Parrots are taken from the nests before they are feathered and fed with corn from the mouths of Indian women. Therefore, when a parrot kisses you, he expects to be rewarded, and when he finds there's nothing in your mouth, well, he bites you. That's all."

Notwithstanding the demand for her birds, fish remain the most sought-for pets. Peggy ventures the statement that people in New York apartments have more fish than other pets. Probably the reason is that they require so little care, and cost practically nothing to feed.

A recent craze in pets is tropical fish. The most popular of these is the paradise, a Chinese fish of bronze iridescence from three to six inches long, and the guppyi, a tiny inch-and-a-half fish from the West Indies. The guppyis are unique, as the young of the species are born alive at the rate of eight to fifty every thirty-six days. According to pet-shop findings, supplemented by Peggy's own experience, the world has gone guppyi mad.

Curiosity Led This White Man to Discover the Red Man's Secret

PHOTOGRAPH BY EARL G. HAMMOCK, DELTA, COLORADO

Into the last stronghold of the Indians went Captain Smith to learn the ancient secret of their flint work—a secret which civilization has lost

CURIOSITY has sent men down the seven seas and across a thousand Alps in search of as nany Italys. And it was curiosity hat sent Captain H. A. Smith, monuıent worker and sculptor, into the ıst stronghold of the red men to ·arn the secret of their flint work—ow they cut the stone that resists he tools of civilized man.

Captain Smith was raised on a farm ear Joliet, Illinois, near the middle f the last century. Upon his father's ınd were many Indian burial mounds, nd young Smith was fascinated by ıe artistry of the savages who built ıem. The arrowheads he found on ıe burial mounds were fashioned ith delicate symmetry, and he ıgerly questioned older people as to ow the flint was shaped.

Experts offered many and varied ılutions, but none of them satisfied ıe youthful artist. Those same ·planations are offered today, but 'aptain Smith knows better. He arned from the red man himself ıst how the arrowheads were fashıned into such fine, delicate shapes.

As a boy, young Smith was not allowed ı disturb the burial mounds; nevertheıss, he collected an assortment of pipes ıd flint implements while his father was ı town on Saturdays. At last the day ıme when the boy had his own workshop. ıis desire, however, to know how the red ıan fashioned the hardest and most ·autiful of stone grew, until he closed his orkshop one day and faced west, to find ıt for himself how the red man worked with stone that Smith's own chisels and steel would not cut.

For the next two months each evening saw his camp fire glowing on a grassy prairie ever farther, night by night, to the west. That winter in Colorado, Captain Smith ran a boarding-house for hungry loggers. He also fed bands of starving Indians. Sitting Bull munched his cold soda biscuits and grunted sourly. Captain Smith was never able to win over the old chief, and says of him that he was the most cunning and cruel of all the chiefs he came to know.

The soda biscuits, however, won Smith his opportunity to learn the secret of the flint work. He did not arrive a year too soon, for the Indians were already replacing flint arrowheads and implements with hoop iron purchased or stolen from the white men.

The Indians did not forget his kindness, and when summer came he went among them and sat with the flint workers. He found that the work was not done by squaws, as is popularly supposed, but by the old men. The boys of the tribe were taught the secret by their grandfathers.

The work was exacting, the flint to be shaped was held in a sloping position, and another piece tapped against it. Flint is very hard and chips readily. Minute flecks were pecked from the rock as it was slowly modeled. Utmost skill was required.

In order to convince any who might doubt his word, young Smith sat down with the old men and learned the art himself. Not only did he learn the flint work, but he learned the picture-rock language of the tribes, their feast signs, death notices, water guides, and hunting stories, as they left them on the red walls of the canyons.

Following the Civil War, Captain Smith again returned to Colorado and packed his tool chests over a boulder-strewn trail down into the Escalante Canyon, a

Digitized by Google Original from UNIVERSITY OF IOWA

broken valley walled in by towering crags and pillars of red sandrock. At the foot of a great stone face cut from the red walls by the winds and rains of the ages, he built a workshop.

Selecting a giant boulder, Captain Smith cut one side of his house from it, building the others in modern fashion. From the stone wall he chiseled a bed, working for twenty-six days upon it. Above the bed he cut a niche for his pearl-handled revolver, and at the head he hollowed out a square for his rifles.

Anyone making the trip up the canyon to Captain Smith's workshop will marvel at the seeming impracticability of going ten miles up a canyon to work, when he could have built a shop in town fifteen miles away, thus saving a dollar a pound freight charges on his stone slabs. The explanation given by the Captain is interesting and strikes deep:

"The fellow who can't get out and live with himself is not big enough to do real work. Out here in the shadow of the canyon walls a fellow can't fool himself with halfway work. There isn't anybody to convince you that your stuff is good; you've got to convince yourself."

R. G. MONTGOMERY

Here's a New Use for Old Papers

This "paper" house cannot be pulled down about the Stenman family's ears. It's as solid as if it were built of wood

"HOW did you ever think of making a house out of newspapers?" I asked the mistress of the famous "Paper House" of Pigeon Cove, Massachusetts.

"Well," she replied, "it all began quite naturally. "We were talking one Sunday afternoon about building a little summer home near the shore, when my husband suggested that we build it out of newspapers. We all worked on it, and the idea grew until we perfected our plan."

On a rocky knoll, just off the main highway, in a lovely, natural setting among small trees and rocks, with beautiful summer flowers growing profusely, I found this unusual summer home of Mr. and Mrs. E. F. Stenman and their daughter.

I had expected to find a somewhat crude affair. Instead, I found a house which was also an artistic home. It is made entirely out of newspapers, with the exception of the frame, the windows, and the floors. It has no cellar, the uprights being erected upon a big, flat ledge.

Panels of newspaper, prepared in several thicknesses and then varnished, were set in between these uprights. Diamond-shaped pieces of folded newspaper, tacked on like shingles, were then placed upon the outside. When completed, the whole house was given two coats of varnish.

Mrs. Stenman said all three of them worked for two years getting paper ready before they began to build the house. A carpenter erected the framework. Aside from his help, the family did all of the work themselves. The paper bungalow has stood the test of all sorts of New England weather for five years, and shows no signs as yet of any real deterioration.

The day I called, Mrs. Stenman was working outside among the flowers. The daughter, a girl in her teens, was showing some visitors the house. Mr. Stenman was at his place of business. He is a wire worker, an inventor, and holds eighteen patents for various wire devices.

While the house at Pigeon Cove, Massachusetts, is unusual, the furniture is equally so, for it is constructed of tightly wound rolls of newspaper of varying diameters.

Mr. Stenman was the originator of the idea of rolling the paper. Newspapers were spread out flat and rolled very tightly until the right-sized roll was obtained; then it was fastened with glue and given two coats of varnish. The rolls were thoroughly dried before using, with the result that they became as solid as wood. In design the furniture is modernistic, being built mostly on straight lines. A long, low couch, window boxes filled with plants, chairs, a bridge lamp, and the famous Lindbergh desk are the furnishings of the living-room. The bridge lamp has a shade lined with the funny pages of a Sunday edition.

The Lindbergh desk is the most interesting, perhaps, of all the furnishings. It is made from portions of the daily papers giving the stories of Lindbergh's flights and receptions. So carefully has Mr. Stenman arranged the accounts in the rolls that they can be unrolled intact and the story read consecutively from day to day.

The dining-room has a large, hexagon-shaped table, several chairs, a long settee, and a floor lamp. In the living-room, a frieze, cut, in points, from the brown roto-gravure sections of Sunday papers, has been added at the top of the room.

The Stenmans built their little home far from human habitations, but often over the week-ends hundreds of visitors call. During the winter the Stenman family live in Cambridge, Massachusetts, having moved there about seven years ago from Lynn, Massachusetts, where Mr. Stenman worked at his trade.

Let us cook and blend them into a delicious soup for you!

NOT some of these vegetables—*all of them* are enjoyed in Campbell's Vegetable Soup . . . . Just think of the time and expense of selecting, purchasing and preparing all these different vegetables—15 of them—in your own kitchen! . . . Yet you delight in soup that contains them all . . . Add an equal quantity of water to Campbell's Vegetable Soup, bring to a boil, simmer a few minutes—and it's all ready—"a meal in itself." 12 cents a can.

Ask your grocer to supply you with any of these Campbell's Soups

Asparagus	Mock Turtle
Bean	Mulligatawny
Beef	Mutton
Bouillon	Ox Tail
Celery	Pea
Chicken	Pepper Pot
Chicken-Gumbo (Okra)	Printanier
Clam Chowder	Tomato
Consommé	Tomato-Okra
Julienne	Vegetable
	Vegetable-Beef

Isn't it dandy
How lively you feel
After a piping-hot
Soup for your meal!

WITH THE MEAL OR AS A MEAL SOUP BELONGS IN THE DAILY DIET

Waterman's No. 7

Seven Points

Seven Dollars

Red
Standard—Suits most writers. A splendid correspondence point. Medium flexibility. For home and general use.

Yellow
Rounded—A different pen point. The tip is ball shape. Writes smoothly on any paper in any direction. Suits southpaws.

Purple
Stiff, Fine—Writes without pressure. Makes a thin, clear line and small figures with unerring accuracy. Popular with accountants.

Pink
Flexible, Fine—As resilient as a watch-spring. Fine, tapered point; ground fine to shade at any angle. Loved by stenographers.

Blue
Blunt—An improved stub point. Makes a broad or fine line as desired. Unusual and rapid writers like this pen.

Green
Rigid—Tempered to armor-plate hardness. Will not shade even under heavy pressure. Unequaled for manifolding. The salesman's friend.

Grey
Oblique Point—A slanting stub, preferred by those who hold pen at an angle or between fingers.

Why "Number Seven"? To have a sharply distinctive name for a sharply new idea—a color band around the cap to signal at a glance the kind of point. A system original with Waterman's that is revolutionizing pen selection.

Why Seven Points? To permit wide selection by meeting every pen-fancy and pen-need. One of these points will precisely fit *your* taste, whoever you are.

Why Seven Dollars? To put the most reasonable possible price upon a pen embodying the greatest possible quality—larger ink capacity, simple self-filling device that locks, stainless and perfectly balanced Ripple Rubber holder, and Clip-Cap.

Waterman's number 7 with 7 points at 7 dollars means accurate selection made in a few moments—and satisfaction for life.

At any one of our fifty thousand dealers try all the seven points—the dealers expect it and are glad when you do. One of the 7 is exactly the point you prefer

"Life is to Find Out"

(*Continued from page 39*)

ld-time friends of Ellen's. It was all ıther ghastly.

One of Blake Whipple's hacks brought ıe widow back home. Sarah Moore ıanted her to come across the street and ay at the boarding-house. Ellen objected. Mrs. Moore would be so kind as to keep ıe children over there for a day or so—ll their mother got her "bearings"—it as all the trouble she wanted to cause.

"There's something I must fight out one," she told them. She seemed to be ıne but moving in a trance.

They acceded to her wishes. She "fought out" alone.

Three days and nights she stayed up in ıose rooms. The shades were all drawn. o lights gleamed at dusk. Then the urth afternoon she showed herself on lain Street.

SEEN Ellie Thatcher?" cried Uncle Joe Fodder. He had encountered Sam od at the corner by the bank.

"What do you mean, seen her?" The litor was puzzled by the awe in Fodder's ɔice.

"I met her jus' now, goin' in th' Methlist parsonage. Claimed she was seein' ı' minister t' get her ol' job back, playin' ıe organ. I knowed her figger, Sammil, *ıt I didn't know her face!*"

"What's happened to her face?"

"God, Sammil! . . . it's changed!"

"Changed how?"

"Can't tell you perzactly. Like she'd ught an' conquered sumpin'."

"Real sure 'tain't relief, are you, getng unhooked from Ed?"

Despite Fodder's warning, Hod was ırdly prepared for Ellen's metamorphosis hen, later that day, she entered our office. er eyes held . . . tranquillity!

"For gosh sakes, what's happened to ɔu, Ellen? And what's this palaver I ear about town—something 'bout you ıving a dream or vision?"

Sam Hod had to coax. But at length llen told him.

"You might—call it—a dream, I supɔse. The second night up in those rooms ours—alone!—something came to me."

"Something *came* to you!"

"I was sitting in the dark—numb all er—with the world crashed in on me—rather a chasm yawning in front of me. erhaps I was sleeping. What difference ıes it make? I was all alone—and had me—to that abyss."

"You mean finding yourself a widder so ddenly?"

"Ever since girlhood, Mr. Hod, I've alized that on father's death I wouldn't ve a relative. Our family was all gone. ell, father came to die but at least I had l. Then the worst happened. I'd even ıt my husband. All I had left was three pendent children."

"You had *them*, anyhow. It's not so d as if you were childless."

"Yes, but they're different. They uldn't help me in facing life's problems. ıey weren't there to *go* to, the same as ıd and Ed."

"Well?"

"Well, sitting there in the dark I seemed to feel someone was near me. I wasn't startled—no more than in dreams. Maybe I was dreaming. Again I say, what difference does it make? Only it was the queerest dream I'd ever had. I wasn't doing anything but sitting in that room—listening to someone speak to me in thoughts."

"Thoughts!" echoed Sam.

"ONE sentence I've remembered. Will I ever forget it? '*Life is to find out!*' That's what I heard. '*Life is to find out!*' I was puzzled, of course. I tried to move and couldn't. Then the light started fading—"

"Light! Thought you said you were sitting in the dark?"

"A queer, warm, beautiful glow. Like a candle, Mr. Hod. Yet I didn't see its flame. You know how dreams are lighted? And it gently floated off—all of it—leaving me behind—in the dark. On and on it went in the distance, always slightly upward. Then . . . the sun was in the room . . . prying underneath the bottoms of the curtains."

"You *must* 'a' been asleep, if time passed that quickly."

"I kept at home all day yesterday. Yes, and last night. I didn't dream again. Not a dream with thoughts, at least, like a rich mellow voice—or a warm, lovely glow. And . . . I finally fathomed the meaning of that sentence."

"Life is to find out?" The editor sat staring. Had he ever known *this* Ellen? It came to him suddenly that the one-time frail, colorless woman—or the husk of her—had been dramatically infused with a strong, vibrant Soul. Vaguely it awed him. He got what Fodder meant in their talk near the bank. "I—don't—quite grasp it, Ellen," he faltered.

She misinterpreted. . . .

"Mr. Hod, I'm thirty-five years old. Ever since childhood I've been panic-stricken at the eventual prospect of being abandoned; I feared being alone. So, don't you see, because I was afraid, Life has been given me as a pattern of factors that should *leave* me alone. Alone to find out."

"But to find out what?"

SHE gazed at him in wonder, that he failed to comprehend. "Why—that—that being alone was exactly what I needed—to develop my character—to make me strong—to show me the shallowness, the emptiness, of fear. Life was to find out what the fear was like in all its stark tragedy—to go through it—to leave it behind me—to follow the light."

"To follow the—?"

"Don't you see, Mr. Hod? . . . All of us have some sort of fear, some weakness, something we shrink from through a defect in our soul-strength. We're on this earth to meet it face to face, to explore it, to know the full pain of it, the joy of discovery that it's possible to vanquish it. For thirty-five years I've had this aloneness coming . . . because that was my weakness and I needed to be strong."

"How you going to earn a living, Ellen?"

Doubtless, in the shock of her grief, Hod told himself, Ellen, shut in alone, had experienced some neurotic illusion. A reflex from her subconscious panic it was, that could rationally be explained. Meanwhile, if she got any strength to bear her burden from the thought that the supernatural was responsible, what harm could be done?

"Oh, I've thought that out too. I'm surprised how clear my head is, not cluttered up with terror. There's only one thing I know—my music. I shall try to teach music."

"Well, the town's big enough to support another, I suppose."

"I'm not the first woman who's lost a husband, Mr. Hod. And life—this life—*isn't all there is*. I needed to have others dependent upon me. That's what the light told me. By thought. Whatever happens to all of us is planned for a purpose. Life is to find out!"

Was she slightly cracked? How could Sam say so, seeing her eyes?

"And now I want to know," she concluded, "how much it's going to cost me for a monthly ad in the paper."

"Not a bally penny!" said the editor.

He sat a long time after Ellen had departed. The back room quieted. Employees went home.

"I wonder!" he mused, as the office grew dusky. "Well, the years ahead 'll tell. Three youngsters to raise will be a good test."

THEY were.

No one in Paris, Sam least of all, hearing of that strange reflex from Ellen's despair, had the slightest intimation that instead of arriving at the vortex of experience, she was still at its edge. Her father had gone. Ed Thatcher had gone. There were greater tests ahead—weird tests.

For instance . . . Margaret.

Ellen's success as a music teacher came so quickly we were startled. Yet no one could say town pity was behind it.

True, large numbers of compassionate parents were abruptly convinced that if music had charms to soothe the savage breast it might also be utilized to subdue certain small Indians and squaws they were raising. But her real popularity came from her temperament. Children were strangely drawn to her, even more than their elders. Maud Penfield, the other town music teacher, had a weakness for rapping little knuckles at the production of discords. But Ellen was patient. And her income grew amazingly.

She paid off Ed's local debts and later moved her brood to a small, white cottage over in School Street. Margaret reached the gawky age. Small boys made her miserable, mimicking her lisp. Tommy developed into a shy, round-faced little boy with a ludicrous cowlick and a nose like a button—a quaint, undersized little nose that endeared him to every woman who saw him. He celebrated his attainment to short pants by speaking a piece at a Sunday-school concert . . . something whose verses ended: "And I love you more than tongue can tell!" Evelyn was a frail, sickly little thing who would grow up into a perfect replica of her mother as she was the night Ed saw her in Will Seaver's grocery. But they were neat, perfectly behaved

Digitized by Google

Original from UNIVERSITY OF IOWA

children, and Ellen's life was becoming a beautiful rebuke to those crasser women who had once recommended a rolling-pin for Thatcher.

Then Margaret went to a Sunday-school picnic.

Over at Lake Hathaway, the picnic was held. And in midafternoon a trio of small boys pursued a badly plagued child with the gleeful threat, many times repeated—

"Maggie Thatcher!
Come and catch her!"

Blindly she fled their torment, over through some bushes. A pasture ran sharp to the edge of the lake and a ball game was in progress. . . . At sundown, three white-faced little boys edged close to their teacher. In her skirts they whimpered:

"Maggie Thatcher . . . she f-f-fell in th' water!"

A wisp of soggy muslin was finally espied, bobbing beneath alders. Margaret still had two sprigs of wild strawberries clutched in her hand when they floated her out.

It was an awful test of her philosophy, for Ellen, when they brought the drowned baby home from the picnic. Another night she sat with her dead. But only one night this time. When neighbors came in at daybreak, her calmness was back, twice stronger than before.

BUT it took little Tommy's passing a year and a half later really to show us what had worked in Ellen's soul. He came in from sliding one winter's twilight. His little nose was 'runny"—that same quaint nose that all the women loved. By eight o'clock he was wheezing badly. At ten he was running a fever. Lights burned in the cottage all through that night. A husbandless mother was in there, beautiful in her grit, making a desperate fight, with a kindly old physician, to save that tiny life-spark.

They kept it alight the first night. Day came and Tommy seemed gaining perceptibly. Then another night descended—and those fateful hours of somnolent morning. At a quarter to three o'clock, her only little son smiled up into his mother swimming eyes. She heard him murmur: "—love 'oo more 'an tongue can tell!" At exactly three o'clock he was a memory in her heart.

Ellen arose, her battle lost. At least her battle to save the small life. She tidied the chamber. Some time later she emerged to the sitting-room. Four women had come in, to help with the weeping.

Well, Ellen did weep—a little bit—if heroically smiling through tears be weeping. No one in Paris ever contended that Ellen's soul-strength came as a vision. Perhaps she fought a greater battle with the oversoul that morning than she had with the Reaper during the night. But she won it beautifully. When Mrs. Mason sobbed: "It's so awful for a child to die! Poor little soul—going out in the dark! . . ." Ellen echoed "Dark?" And her eyes had found once more their trance-like softness.

"Isn't it?" asked Sarah Moore.

"No!" replied the mother. "Not out in the dark! . . . *Up into the light!* This is the darkness—this life—now!"

"But all the same, they're so weak, so helpless!"

"Physically helpless, yes, Sarah. Physically helpless in this—this world of darkness. Which is why God provided us mothers, I suppose. But no child is spiritually helpless, Sarah. Children are—are spiritual giants—compared to us grown-ups. We're the—the weaklings. Tommy will find his way—right this moment he's finding his way!—up through the light. He hasn't had time to forget his earlier passage through it to—to reach my arms."

SHE had only Evelyn now. And as Uncle Joe said later that winter, noting the woman Ellen was becoming, her inimitable tenderness toward the only remaining girl:

"That's a whole lot o' mother t' waste on one young 'un!"

Evelyn, the sickly child everyone was certain could not reach her teens, was the one who survived. She grew into a rare, fragile orchid of a girl—shy, reserved, not understood by cruder town children—which drew her closer to the splendid mother's soul.

The two were inseparable. Ellen taught her all the music she knew. Parishioners passing Calvary Church on many an evening would hear chords of music from Calvary organ. Peeping through the vestibule doors, they would see a sweet picture up in the choir loft. Two lamps would be lighted—on either side the rack. And up on that bench, their backs to a great darkness, Ellen would be sitting with her arm round Evvy's waist. Patiently she instructed the girl in the playing of an organ, joyous in her heart that Evelyn wanted to learn. Month after month of it. Year after year. . . .

And the time arrived when the realization that Ellen Thatcher was the town's most beautiful matron pleasantly appalled Paris, Vermon . Small wonder she had a daughter so delectable. Her frailty was gone—Ellen's frailty. Her hair had become as rich folds of gold—not a silver thread in it. Half a dozen middle-aged men, some married and some not, were in love with her. She could have married wealth, tenderness, masculine strength now when she needed none of them. If life is to find out, Ellen was finding. She was too big a woman for any one man to possess her exclusively. And one by one they ruefully confessed it.

THEN Evelyn reached eighteen. And of a moonless night in spring she went into Will Seaver's grocery store.

A heavy-set young man swung his feet from a counter. He wore a smart business suit, two watch-chains and a "warm" waistcoat. He traveled for the York State Grocery Company.

His name was John Hume.

"For cripes' sake, who's *that* Sheba?" he demanded of Ben Lyman. He stopped his swinging feet.

Old Ben, quite bald now, stiff in his ankles, leaned harder than ever when a counter offered.

"No pickin's there, Jack," he growled. "That's Evvy Thatcher, Ellen Thatcher's girl. Dunno which is hardest to 'make'—the mother or the daughter."

Hume looked appraisingly at Evvy's pretty back. He was a dark-eyed fellow with a dimple in his chin.

"Mean to say I couldn't make a frail like her—if I really took the notion?"

Evvy turned at the moment, as if she had heard. She caught his glance on her, flushed, started out with her purchase. Hume slipped across.

"Haven't you left one of your bundles?" he addressed her.

"Why—n-no!—that's not mine. That's part of an order the clerk was putting up for someone else."

"My error, Miss—?"

"Thatcher," she said.

"Nice night, isn't it? I'm going up your way. Could I carry your packages?"

"B'gad, he's a fast worker!" gulped Lyman, as the pair were lost to view. "But Ellen won't stand for a feller like him. She'll slap him down quick."

The mother, however, did not slap him down. Hume ignored his Wickford business, when local trade had been called on. He took a room at the Whitney House and started attendance at Calvary Church.

Evelyn frequently substituted for her mother, playing the organ there.

How he contrived to meet Evelyn again and again, what he said to her, how she became enamored of him, what the mother thought of it all and what remonstrance she made, was disclosed to Paris in sharp, dramatic sequence.

OF a night in late July, Uncle Joe was shutting up the office of his livery when he heard a swift step coming in across the yard. A hot, sultry night it was. Thunder heads were piling; eerie flashes lit them. The veterinary turned as his doorway framed a woman.

It was Ellen Thatcher.

"Mr. Fodder! . . .Would you harness me one of your rigs . . . in a hurry?"

"Jus' what's th' trouble?"

"Evelyn has . . . well, she's . . . I found a note on my dresser . . ."

"Ellen, is it Hume?"

"Yes, they've . . ."

"Which way did they go?"

"They've gone to get married over in Foxboro."

"A hoss ain't no good. What you need is a car."

"But I can't drive a car."

"I kin drive a flivver. Let's get t' th' garage."

They hurried out to Main Street. Scarcely a word was spoken thereafter. Fodder did the borrowing, saw that the gas tank was filled, started the engine, steered out into traffic.

The air was queerly cool. Small spirals of dust were lifting from the pavements.

"Hang on, Ellen! It's gonna rain hard."

Out East Main Street they clattered, through the ancient covered bridge. Fodder was old; the car was a crate. Yet he tackled the grade by McDermott's in high.

Halfway up he was forced into low. Up, up, they climbed, twisting and turning, the radiator boiling though the grade was half mounted. Ruts wracked the flivver. Water bars jounced it. They reached the plateau that runs flat to Haystack Mountain.

"The storm's chasing us!" Ellen cried once. "The rain's already a mist above Paris."

Certainly the thunder-peals were chasing them. Louder, sharper, more ominous they grew. Eastern stars were blotted out. Big pellets fell obliquely.

They were churning madly down beyond Cobb Hill when that lightning-flash came. The heavens were ripped by a mad slash of light. A stupendous explosion! A roar as of a gale! Uncle Joe felt a blurred, swinging sensation. The car was going wrong—

Our Biggest Job

To get men to make our 7-day test. 86% of those who try this amazing shaving cream, we find, never return to old methods.

GENTLEMEN:

You've heard men say: "I never clip the coupons out of ads." And yet we have something so unique for you that a great many have cut their *first* coupon out of ours.

For, after years of experiment, we have perfected a shaving cream that men tell us is outstandingly a leader. They claim for it things that we, in modesty, could never say.

Our method of presenting it is this: Try it, at our expense, for a week before you buy. Then, if you like it—as 86% of those who try it do—you can buy it at stores wherever you are.

Men, impressed by the fairness of our offer, have tried it; have made Palmolive Shaving Cream leader in a highly competitive field. For it holds the great majority of those who make our test.

5 remarkable points

Palmolive Shaving Cream came as the result of years of experiment. Our 130th formula brought success—achieved the 5 things 1000 men had given us as the requirements of any new cream hoping to win the public.

1. Multiplies itself in lather 250 times.
2. Softens the beard in one minute.
3. Maintains its creamy fullness for 10 minutes on the face.
4. Strong bubbles hold the hairs erect for cutting.
5. Fine after-effects due to palm and olive oil content.

Now try it please

Now, whether your old shaving preparation suits or not, try ours. *You* risk nothing. *We* undertake, in 7 shaves, to win you. It's an open-and-shut proposition, and you are the judge. So won't you mail the coupon now?

ALMOLIVE RADIO HOUR—Broadcast every Wednesday—from 9:30 10:30 p. m., eastern time; 8:30 to 9:30 p. m., C. T.; 7:30 to 8:30 m., mountain time; 6:30 to 7:30 p. m., Pacific time—over station EAF and 39 stations associated with The National Broadcasting Co.

To add the final touch to shaving luxury, we have created Palmolive After Shaving Talc—especially for men. Doesn't show. Leaves skin smooth and fresh—gives that well-groomed look. Try the sample sent free with the Shaving Cream. New delights here for men. Clip and mail the coupon now.

Then the flivver plunged weirdly as into a cushion—a cushion that crackled—rebounded—flung them crazily. Glass crashed. Head-lamps sputtered.

Then a smashing shock. A shriek! A thud!

"Ellen! Ellen! Where are you?" wailed the hostler. He was down in cold sop, thick rain in his beard.

In a long, broken flash he discerned what had happened. A tree had toppled over directly in their pathway. They had struck it head-on.

"Ellen! Ellen!" The old man arose dazedly. By more lightning flares he saw her. She had been hurled in the gutter when the car turned half over.

"Uncle Joe! Uncle Joe Fodder!"

"Yes, I'm right here. Can I pick you up? Babcock's barn is a bit further on."

He lifted her somehow, got around the tree, staggered on through wild deluge.

Black it was, in that barn. Yet the woman must be sheltered.

"Set me down, Uncle Joe! Don't carry me farther. I'm . . . I'm too heavy!"

"Ellen, be you hurt?"

"I feel . . . all broken . . . to pieces . . . in *here!*" More lightning-flash streaked. He saw she was holding her hand at her breast. "Uncle Joe! . . . straighten out my leg. It's bent . . . it hurts . . . and yet I can't move it."

"Ellen! *Ellie!* You ain't dyin' on me, be you? Oh, God, don't die on me, Ellie. Not out here like this!"

ALL storms pass. That storm passed. Sweet rain dripped sorrowfully from mossy, twisted shingles. A great patch of night-light outlined the door. Stars presently showed, out behind the hill.

"It's all right, Uncle Joe. I'm resting easier now. And I want you to promise you'll tell Evvy something. Tell her I was grieved that she had to run away. She didn't have to do it. I wanted her . . . to know."

"You mean you didn't hold it ag'in' her, runnin' off with that Hume?—that drummer!—makin' your mistake all over—?"

"My mistake, Uncle Joe? But I—I made no mistake. You don't understand. Nothing happens by chance, Uncle Joe. I was—I was due to marry Edwin—just as that tree was due—to fall directly in our pathway—"

"You may hold f'r that sort o' thing, Ellie. I *don't!*"

". . . Well . . . tell Evvy . . . I didn't want her to think . . . if she really loved John . . . she must have her wedding as I had mine. If she loved him enough to go off with him alone—m-m-marry him—she needs that experience or it never would have come. Make it plain to her, Uncle Joe. She mustn't grieve all her life, thinking I was hurt—trying to follow—trying to dissuade her."

"Oh, why *don't* someone come?"

"It doesn't matter, Uncle Joe. I'm due to pass over in a minute—to be with Mother—Father—Edwin—Margaret—*little Tommy*—I want to see little Tommy so badly . . . his funny little nose! But after I've done it, tell Evvy I'll do what I can to be near her, to watch over her, to help her with her music—"

"You ain't really dyin', Ellie? My God, say you ain't!"

"Life is to find out, Uncle Joe. I've found out! I've done my work—there's no need for me to stay. I've faced the dark, groped into it, found it wasn't the horror that I thought. When you plunge in the dark because you need the experience, you begin to see light—the light that leads on! It's led me, Uncle Joe. It never once failed me. And now—the dark—I'm almost on the farther edge of it—and beyond it's all sunlight. Sunlight! I never dreamed it could be so b-b-bright—"

"Ellen! *Ellen!*"

"—it was worth the dark—every mile of the dark! Now I feel so strong. So happy! I conquered, Uncle Joe. *I conquered!*"

I HAVE recorded this chronicle while propped up in bed, pad across my knees, on the fifteenth floor of a New York hotel.

Earlier this evening, being in Manhattan on a business trip, I strolled up Fifth Avenue. Idly I window-shopped along that great Street of Quality, waited at intersections for traffic lights to shift, noted new skyscrapers recently completed. Music reached me through a lull in the traffic.

Forward on the left, the façade of a church reared loftily above me. Its stained-glass windows were lighted as with candles. Occasionally pedestrians turned up the steps. Strange, I thought, for an evening in midweek. I crossed over, drew nearer, saw small ivory letters on the black of a sidewalk bulletin board.

ORGAN RECITAL

By Evelyn Thatcher Hume

Evvy Hume! Ellen's little girl! Who else? I stood transfixed. I remembered she was playing a big city organ. A line of her mother's dying words came to me: "Tell her I'll be near her as I can, to help her with her music." I had to go in and see what had happened.

That vast auditorium was roofed in hallowed dusk. The pillars of the nave were as basalt stanchions, mighty enough to uphold the zenith. Deep shadows lurked everywhere. The lights were half-real. But there was nothing half-real about that structure that arose in soft grandeur above the distant pulpit. *The Great Organ!*

Tier upon tier, pipes built themselves up. Higher and loftier, wider and heavier, they formed majestic background for that Altar unto God. And up there in the colonnaded strength of them, raised above all heads in a focal-point of radiance, I saw a small, slender figure—the woman at the keyboard. Her back was toward me, yet I knew her face was lifted. She was mistress of that stupendous thing, playing it with the skill, the power, the *glory*, of a modern Saint Cecilia.

How inexpressibly awesome it was, that human ingenuity could be responsible for that edifice of harmony that could throb, wail, suffer, exalt—create and amplify every emotion of the soul—run the overwhelming octave of pain, suspense, revelation, tumultuous victory—bespeaking the sweep of Golgotha from the abyss of despair to the summits of atonement. The great organ! Its majesty! Its power! And Evelyn Thatcher was playing it—little Evvy Thatcher of Paris, Vermont.

I cannot say what music she played. But I discerned that I had entered at the end of that recital. The thunderous diapason died in rich distance. It was dramatically quiet in that vaulted church. Then—

Sweetly, softly, the bell-like notes of an old, familiar hymn. How easily the words fitted in with those chords!

> Lead, kindly Light,
> Amid th' encircling gloom,
> Lead Thou me on. . . .

Like a prayer it was at first, lifting up toward divinity. Notes of purest silver arose from the organ's mellow throat and found their way up to mingle with the Music of the Spheres.

> The night is dark,
> And I am far from home—
> Lead Thou me on!

A little old lady, sitting near me in the pew where I had edged in, spoke to me as a fellow worshiper at the shrine of divine harmony.

"You always know when her recitals are over," the gentle-faced soul took it upon herself to tell me in the quiet between stanzas. "She ends with that hymn. She plays it to her mother!"

I nodded. How could I tell what I knew of that mother? How could I ever have made anyone understand in those holy moments *that I knew Ellen Thatcher was as much an auditor in that moment as any of us who filled those brown pews?* Who might say that she was not looking upon the daughter as we could never see her?—that there weren't mysteries and senses which clay-formed mortals might never encompass, even in conception. My thoughts were drowned out in the throat-filling tumult of victory sublime—

> And with the morn
> Those angel faces smile,
> Which I have loved
> Long since—and lost—awhile!

I CAME from that church without making myself known to Evelyn. I looked at the towering skyscrapers of the great, beautiful, grim city. Up between two of them, in infinite depths of blue, a pure, clean star—one solitary prinkle of grandeur—looked down on the gaudy, extravagant light-jewels of tinseled Manhattan.

Yes, there *was* a light that led on. Men knew it, recognized it, else utter despair would bring their extinction. Deeper than mind, wider than logic, it had first lifted the race to stand upright, then turned human faces upward. Upward to . . .

The star prinkled on, high above the city. Far up there it is prinkling at this moment. A hundred million years hence it will still be up there prinkling.

God keep it there, lest some of us forget!

"WHO is Standing in the Way of Jesus?" This is a question which is asked and answered in next month's issue by Dr. E. Stanley Jones, one of the greatest of American missionaries. For seventeen years Doctor Jones worked in India, and after discarding what he considered the nonessentials from Christian dogmas emerged with a faith which, as expressed in his book, "The Christ of the Indian Road," has made him an international figure. "The Christians," says Doctor Jones, "seem to the Oriental to be guilty of four great immoralities." In this article he names these immoralities, and explains them.

My Greatest Discovery

(*Continued from page 29*)

expert in maids-at-arms, "maybe she's only Boadicea."

He pronounced the British queen's name as if it were spelled "Bodisha," of course. But that did not lessen my astonishment.

Here was a typical fourteen-year-old boy of the thronged East Side—the melting-pot region. Such a lad might popularly be supposed to confine his literary wanderings to "Deadwood Dick" or to "The James Boys, Frank and Jesse." Assuredly, one would not expect him to show a calm familiarity with Ariosto's heroine or with the luckless barbarian queen of the Iceni who was whipped at the chariot-tail by Nero's legionaries.

With elaborate carelessness I began to ask questions. As soon as Fogarty found I had some slight knowledge of both the notables he had spoken of and that I was not guying him, he was ready enough to gabble. He told me he read history, for fun; and that when he could not get history he read simplified ancient romances. There were perhaps not six books in the rooms where he and his family lived. But he had access to the nearest branch public library.

Posthaste I went to the branch library and to other libraries in its general neighborhood. I found what I wanted, and what never hitherto had I suspected, although my newspaper work had taken me deep into the East Side. I learned that history was the favorite topic with hundreds and hundreds of boys and girls of the people; though these youthful readers compla ned to the librarians sometimes that the books were hard to understand and had too many dry places in them.

THAT gave me my idea—the idea I had been chasing ever since Fogarty had talked with me. I explained it to my superiors at the office. They laughed at it. I kept on. Presently (as an experiment and because we were short of "features") they let me have a try at it.

So I wrote the first of my innumerable educational series. It was a simplified narrative history of the United States.

May I tell you just a few things I discovered while I was trying to educate readers of the Evening World in the story of their native or adopted land? If some of these things you know already, you are more fortunate or else better read than was I. For example:

When we were children in school, we were taught that the United States thrashed Great Britain twice—once in the Revolution when we won our independence; and once again in the War of 1812. With this theory in view, I began to study the War of 1812, for my Evening World series. Almost at once I struck a snag.

I found we had gone to war chiefly to prevent English officers from stealing men off our ships and forcing them to serve in the British navy. I knew that before. But I didn't know that the peace treaty contained no promise or even unofficial pledge on the part of Great Britain to stop this practice.

Then I reread the tale of that war in a new light. I found that with the exception of a few border- and sea-fights, we were beaten in almost every battle. I found that the British had driven the President of the United States into hiding and then had captured our capital city, Washington. I found that our great land victory (the battle of New Orleans) was won after the peace treaty had been signed; also, that Andrew Jackson was arrested by local authorities for fighting, against orders, instead of losing the battle by obeying the civilian instructions.

Well—if in the 1812 War with Great Britain we had captured and looted London and had driven the British king into hiding, and then if we had put across a peace treaty in which we did not grant our foes a single thing they had gone to war for—do you think we would have called it a British victory?

YES, that was one bad-tasting discovery I made in my delving and in the extensive day-and-night reading that now was mine. Here is another:

When first our colonies went to war with Great Britain in 1775, it was to enforce better treatment for ourselves and with little idea of gaining independence. Washington himself admitted that at first the idea of separation from the Mother Country was "abhorrent" to him.

I learned, too, that the Declaration of Independence was not actually signed on July 4, 1776. It was merely *adopted* on that day. Signers, one after another, put their signature to it at times when they happened to be in Philadelphia and when the document was available to them. Many did not sign it for a month or two later, and some did not sign until 1777. Yet always I had pictured the whole group standing around the table, on July 4, 1776, signing the Declaration in turn, while the crowd in the square outside cheered itself hoarse.

I discovered, moreover, that the famous picture of Washington crossing the Delaware contains one of the most laughable errors in all history or art. In the painting Washington is portrayed as standing in a boat above which floats the American flag. Washington crossed the Delaware in December, 1776. The American flag was not designed until the spring of 1777.

Speaking of flags, here is another discovery:

Do you know which present-day flag of all the world's foremost nations is the oldest? England's? No. The Union Jack was not adopted until 1801, when the union with Ireland had been achieved. The French tricolor? No. That dates back only to the beginning of the French Revolution. The German? The Austrian? No; nor the Italian.

The oldest flag now flying above any large nation is the United States flag, adopted in 1777. Yet, offhand, I should have said Old Glory was the youngest of the national flags.

You see I had much to learn. Here are a few more "discoveries," bred of my Evening World digging:

Washington was made a field marshal of France during the Revolution—this in order that Rochambeau and de Grasse and the rest of the French generals might serve under his orders here, without loss of prestige. Also, in 1798, we actually went to war with France; and Washington was asked to give up his honorable retirement and to take the field again at the head of the American forces. Luckily, this war was only a flash in the pan.

Slave-owning was not restricted, in old days, to the Southern states. Until long after the beginning of the Revolution all the American colonies held slaves. In my home state of New Jersey, for instance, slavery was not abolished by law until 1804.

For the moment, let me shift from this list of discoveries in order to tell you of one discovery I did not make, and that no sane reader can make, concerning our history. It is this:

In all my historical research I was not able to find one fact about George Washington which did not make his mighty name shine the brighter and more purely, and confirm me in my belief that he was the greatest man and the truest patriot in all history. I found many instances where American newspapers and American politicians assailed him fiercely during his lifetime, harassing him and seeking to belittle his grand work and his sublime personality. But never was I able to find a shred of justification for this vilifying. His name stands out above all honest criticism.

As a side issue, I proved that the story of Washington and the cherry tree is an unmitigated lie. A man named Weems invented it and, later, admitted it was not true.

I may be wrong, but I do not think anyone can truly be educated and glean a fair-sized fund of general information, except through his or her own independent efforts and apart from the regular school or college education. Nor do I think it can be done in any way except by voluntary and eagerly interested reading.

PERHAPS there is no true test of this general information gained from a study of history or of classic fiction. If there were such a test, I have a morbid fear I should fail miserably in it. Moreover, I loathe "questionnaires" as I loathe cold corned beef or parsnips. Yet I am going to ask a handful of questions, if you'll let me—not as a questionnaire nor as a test, and most assuredly not to show my own nonexistent superiority.

I am going to ask these questions without consulting any handbook or other authority. Probably most of you can answer them all offhand. Still more probably you could compile a similar list, with perfect ease, which would stump me. An ordinary simple course in general reading will supply the answer to all my queries. I think they and many more like them could be asked and replied to by the average high-school graduate. Here goes:

What did the following historic characters do to win fame and at the same time to endanger their lives or their liberties or

Small bubbles vs. big bubbles

How the former softens the beard faster and revolutionizes shaving

COLGATE LATHER

Colgate's lather (greatly magnified) showing moisture contact with beard and minimum air. A common-sense principle scientifically authenticated and proved out practically by millions of men.

ORDINARY LATHER

Ordinary, big-bubble lather (greatly magnified). Note air-filled bubbles which can't soften the beard efficiently. Only water can do the job. Only small bubbles permit sufficient water.

THIS news is spreading fast: Colgate chemists, time has proved, have achieved a shaving cream of unique superiority. Its success lies in the creation of a lather with small bubbles.

A new principle so easy to understand. So easy to compare with ordinary shaving

The minute you lather up with Colgate's, two things happen: 1. The soap in the lather breaks up the oil film that covers each hair. 2. Billions of tiny, moisture-laden bubbles seep down through your beard . . . . crowd around each whisker . . . . soak it soft with water.

Instantly your beard gets moist . . . . easier to cut and pliable . . . . scientifically softened right down at the base . . . . then your razor can do its best work.

Better grooming—the utmost in shaving comfort. A world of critical men, after various experiments with big-bubble lathers, have found that Colgate's is supreme. You, too, will agree. Let us help you in deciding—note our offer below.

FREE

COLGATE, Dept. B-1712, 595 Fifth Avenue, New York

Please send me, FREE, the seven-day trial tube of Colgate's Rapid Shave Cream; also a sample bottle of "After-Shave."

*Name*_____

*Address*_____

their careers: Savonarola, Bunyan, Palissy, Luther, Galileo, Hypatia, Cortez, Archimedes, Leonidas, Regulus, John Hancock, Wendell Phillips, Cavour, Richard Wagner, Balboa, Florence Nightingale, Sam Houston, Dante?

Who were the following real life characters: Blondel, Semiramis, Sir John Talbot, Taillefer, "The Black Douglas," Adrienne Lecouvreur, Barabbas, Chevalier Bayard, Attila, Du Guesclin, Perkin Warbeck, Erasmus, Cranmer, Commodore Stockton, Cosimo de' Medici, Horatius Flaccus, "Kate Barlass," Cæsar Rodney?

A mighty interesting story centers around each and every member of the group I have just named. The stories of most of them are thrillingly exciting and they make enthralling reading, as probably you know.

Then here is a clump of fiction characters, from worth-while classic novels or classic drama. You can place all or most of them—far more, I think, than could I if it were you and not I who made out such a list. They are:

Hereward, Boffin, The Knight of the Leopard, Nydia, Thersites, Wamba, Donnithorne, Mantalini, Hester Prynne, Joe Sedley, Mrs. Malaprop, Alberic, Père Goriot, Roderick Dhu, Siebel, Benvolio, Tartarin, Peer Gynt, Uncas, Bussy, Elsie Venner, Aramis, Maid Marian, Lydia Languish, Danglars, Orestes, Sir Nigel, Cassio, Leander, Mrs. Gamp, Silas Marner, Wilhelm Meister, Major Pendennis, Undine, Uncle Toby, Silas Lapham, Francesca da Rimini.

To non-travelers in the wonder-world of reading, few of the names in the three groups will be anything but gibberish. To those who have bothered to familiarize themselves with that wonder-world, name after name will awaken recollections as happy or as sad or as interesting or exciting as would the re-heard names of childhood chums.

IT IS well worth while to have such golden recollections—to renew such splendid acquaintanceships at will, by the mere effort of walking to the bookcase.

I have an odd feeling about my Sunnybank bookcases. They are crowded with loved friends, with wise teachers, with jesting comrades whose wit can charm away the blues, with counselors who can incite me to better thoughts and to straighter aims. Why should I seek the companionship of dull-witted humans when I am lonely? John Jones will tell me his ideas on politics or prohibition. Peter Peters will tell me of his wife's operation or of his five-year-old son's latest cute saying. Henry Henderson will orate long and drearily about his seven-week-$700-European tour or tell me the gossip of his neighborhood. Dick Dickson is a mine of sloppy hard-luck stories.

Others will talk to me about their own flat adventures or of their uninteresting routine affairs. (I am not speaking of the scores of really interesting or congenial people one meets, but of the hundreds of folks who are not so.) I must listen civilly and try not to yawn, while these folk bore me or rub me the wrong way. Decency demands that I do not shut them up and stand them in a corner, as I could do if they were books, when they fail to entertain me or when they jar upon my mood of the moment.

Ready for a Drink?

"You're welcome. And it's the finest water in the world. I've been drinking it for 50 years."

LEAR, cold water from an old-fashioned well looks mighty tempting on a hot day. One might naturally think that if the owner the well drinks the water it must be pure. But e fact that he has drunk the water without ap-rent harm does not prove that the water is pure. ience has discovered that a few individuals have en able to drink water more or less polluted with phoid germs without contracting typhoid fever. t it is never safe for anyone to take immunity granted.

yphoid fever is a filth disease. It usually kills one t of every ten persons who have it. Until thorities responsible for the purity of drink-g water, milk and other foods in cities and wns learned how to guard against typhoid, tbreaks of this disease scourged the country ar after year.

here were no great typhoid scourges last ar in the United States, yet approximately ,000 persons were stricken needlessly with phoid fever and 6,500 died.

hose who recover from typhoid fever are left such physical condition that for about three ars afterward the deathrate of such persons twice the normal rate for the same ages.

Wherever cities protect their supply of drinking water from sewage or purify their water by chlorination the deathrate from typhoid drops. A marked reduction also takes place in communities where milk and food supplies are carefully protected and food handlers thoroughly inspected. But until this protection is general in cities, towns and villages and in country districts as well, typhoid inoculation is vitally necessary.

Why risk typhoid fever when it can be prevented?

The story of inoculation which prevents typhoid fever is a brilliant page in the history of the many triumphs of science over disease.

During the Spanish-American War 281,000 of our men went into service. *One out of every twelve contracted typhoid.* In the World War there were 4,000,000 American soldiers, nearly all inoculated against typhoid. Although many of them were sent to typhoid-infected areas, only *one out of every 3,700 had typhoid.*

While typhoid fever frequently comes from drinking polluted water, it also comes from infected milk and various other contaminated foods, and from unsuspected "typhoid-carriers"—a few individuals who have recovered from the disease but who continue to carry the germs. When typhoid-carriers are employed as helpers in households, hotels or restaurants there is great danger that they will cause infection among those they serve.

Inoculations against typhoid fever are simple and leave no scar. They protect from two to five years. Why take chances? Be prepared for your motor, camping and hiking trips this year. Go to your doctor for the protection he can give.

Inoculation against typhoid is not the same as inoculation which prevents diphtheria or vaccination against smallpox. All three are necessary health protections at home and especially when traveling. The Metropolitan will be glad to mail, without cost, its booklet, "The Conquest of Typhoid Fever," to anyone who requests it. Address Booklet Department, 69-A, Metropolitan Life Insurance Company, New York.

Now... NoMars for all furniture. Just drive them on.

Here's the new way to protect your rugs and floors

Bassick announces the "Drive-on" NoMar . . good-looking . . easy to apply

NOW your last piece of floor-scarring furniture can have its claws clipped. The new NoMar — the "Drive-on"—makes it easy to equip even furniture not bored for caster-sockets.

With "Drive-ons" every rug is safe . . . every square foot of linoleum, every foot of polished floor . . . safe from gouging, scraping, marring. And safe with so little trouble. For "Drive-ons" drive firmly into place as easily as a nail is driven.

Their rich, unobtrusive brown blends pleasantly with the color of furniture and floorings. Their polished curves add a happy touch of refinement.

By all means get them on your furniture. For a trifling cost you can give your precious floors this last ounce of protective care.

Stop at your nearest dealer and ask for them by name . . . Drive-on No Mars—that's it. If he hasn't them yet let us know and we'll see that you get them. Do try "Drive-ons." They fill a long felt need. We have a helpful booklet that describes their use.

Shall we send you a copy? The coupon will bring it.

THE BASSICK COMPANY, Bridgeport, Conn.

Bassick Casters, NoMar furniture rests and Bassick Period Hardware are the finishing touches of excellence for fine furniture.

Drive-on NoMars are packed 4 to a set with the handy driving tool included in each set.

The sizes and prices are:

No.	
10—1¼"	$.50 per set
20—1½"	$.60 per set
30—2"	$.70 per set
40—2½"	$1 per set

If I want entertainment, I can have it by wandering into my library and taking down a book from the shelves. If I need counsel or mental stimulus, rather than excitement, there is a one particular small shelf I reach out to. From this little platform grave old Marcus Aurelius chides me gently for not keeping better hold on my temper and nerves. Montaigne and Schopenhauer and La Rochefoucauld and Emerson—swallowed in small doses, all—are tonic for whatever mood I may be in.

THERE is a shelf where I seek and find word-music which to me is also word-*magic;* from such old-fashioned but immortal singers as Tennyson, Scott, Longfellow, Holmes, Whittier, Lowell, Macaulay—bards who sometimes tell right stirring stories in their songs.

(Yes, I know that this choice of poets will stamp me, once and for all, as hopelessly low-brow and as a back number. I lack the brain and the appreciation needed for reading such poetry as the new *intelligentsia* praise. I have a perhaps foolish preference for understanding the meaning of things I read. When I want to fret over the deep-hidden significance in something, I turn to cross-word puzzles rather than to poetry. As I confessed, I am a low-brow and I am old-fashioned, and I have not even the grace to be ashamed of it.)

Then, when I want to mount the enchanted carpet and ride back into the past, there are Prescott and Lossing and Plutarch and Gibbon and Motley, and a half-dozen others, on my history shelf, to carry me whithersoever I would journey, through other centuries and other lands.

With them I can watch Cæsar, bald and beak-nosed and epileptic, ride into Rome, against the Senate's commands, at the head of his iron-faced veterans of the Tenth Legion. I can see Cortez and his handful of blackguardly supermen smash their way to the bleeding heart of ancient Mexico, conquering against odds of a million to one. I can hear Harold's Saxons bellow: "*Out! Out!*" as their Norman foes charge up the hill at Hastings, to conquer England.

I can follow Washington on his stealthy march past the waiting foe in New York, and thence I can swoop down with him upon the unsuspecting Cornwallis at Yorktown. I can be in the whirling midst of every warlike or political or social upheaval the tired old world has ever known—all by dint of this single history shelf of mine.

From shelf to shelf of my none-too-large library I can stroll; everywhere finding new joy and interest; ever making discoveries. The wisdom and the wit and the excitement, the philosophy and the goodly fellowship, and the word-music and the stark drama of the ages—they are at my command.

Will you laugh at me when I say that the mystic mastery of this book-world is worth as much as is the ability to play thirty-six holes of golf in a morning; or to dance yawningly and swig illicit booze, until gray dawn at a night club?

I have not touched on the deeper and more practical values of Bookland; because I can't well do it without being hypocritical. I mean, the chances of learning foreign languages or of mastering some profession or of acquainting oneself with the technical details of astronomy or

This penetrating foam

CLEANS TEETH BETTER

Scientist discovers that Colgate's has lower "surface-tension"... hence greater power to cleanse tiny crevices where decay starts.

TOOTH decay begins, says modern dental science, in the tiny crevices where no toothbrush can reach and where food particles and mucin deposits collect.

Ordinary toothpastes fail to get down into these hard-to-clean places. Hence, the real test of a toothpaste's power to clean is its ability to penetrate deep into these tiny crevices.

A scientist recently made a remarkable discovery. He found that Colgate's has a greater penetrating power* than any of the leading dentifrices on the market today.

When brushed, Colgate's breaks into an active, sparkling foam. This foam possesses a remarkable property (low "surface-tension") which enables it to get deep down into every minute pit and fissure. There it softens and dislodges the impurities, sweeping them away in a detergent wave.

In this foam is carried a fine chalk powder... a polishing material prescribed by dentists... which polishes the enamel safely, brilliantly.

Think what this means to you... by using Colgate's you can clean your teeth thoroughly, scientifically, exactly as your dentist would have you clean them... restoring the natural loveliness of teeth and gums.

If you have never used Colgate's you will be surprised and delighted with its wonderful cleansing action. Mail the coupon below for a generous trial tube and an interesting booklet on the care of the teeth and mouth.

ıe one function a dentifrice is *clean* the teeth.) dentifrice can re pyorrhea; no ntifrice can permnently correct acid condition the saliva. Any im that any denrice can do them misleading.

How Colgate's Cleans Where The Toothbrush Cannot Reach

Greatly magnified picture of tiny tooth crevice. Note how ordinary, sluggish toothpaste (having high "surface-tension") fails to penetrate deep down where decay may start.

This diagram shows how Colgate's active foam (having low "surface-tension") penetrates deep down into the crevice, cleansing where the toothbrush cannot reach.

NATIONAL
CASKET COMPANY, INC
OAK

THE PUBLIC IS ENTITLED TO THIS INFORMATION

SOMETIME to nearly every one comes the day when the responsibility of a funeral must be assumed. Too often it brings duties and obligations that are wholly unfamiliar. The casket, for instance, must be selected. And this involves such questions as, "What should it cost?" "What is it made of?" "How is it made?" "Is it in good taste?"

These questions should be answered before the day comes when it is painful to ask them. Realizing this, the National Casket Company is placing before the public information that should give every one a measuring rod of casket value.

Every National casket carries, in a visible but inconspicuous place, the trademark reproduced above. This trademark not only guarantees the finest casket construction, but it also specifically states the material used. If a National casket is made of bronze, the trademark states "Bronze." If it is made of mahogany, it states "Mahogany." The beauty and dignity of the casket are apparent on sight.

The National trademark is the symbol of a company known and respected for almost half a century. When you see this mark, you can be sure it pledges the finest casket to be had for the price asked.

National caskets are sold only through funeral directors. It is reasonable to assume that those who handle merchandise of high quality have high standards of service.

We have prepared a booklet, "Funeral Facts," and will send it free on request. Address Dept. A-3, 60 Massachusetts Ave., Boston, Mass.

higher mathematics or architecture or archæology or other profound studies.

I have not touched on these, because, personally, I have always lacked the application or the real desire to acquire them. I have been talking only of what the discovery of Reading has meant to me; and thus what it may be made to mean to any man or woman of average intelligence.

This rambling article is for such people as myself, not for born students. It is not a treatise on Higher Education or Self-Improvement. It is only an account of the fun and keen interest and profit which any ordinary human can gain through exploring expeditions in the wonder-world of books. I have tried to point out to you the easy road to that wonder-world, not to lead you to a weary study of abstruse themes.

I say this in no false humility. I have no ambition to be a profound scholar, but only to gain great and lasting pleasure and knowledge from my reading. Again and again, I have been lonely in crowds. Never have I been lonely in Bookland.

THERE is another hint I can give you, whether or not you care to avail yourself of it: The greatest and the best-told stories, the simplest and the sublimest philosophy, the grandest example of literary style—all are combined in one volume. That volume is the Bible.

I do not know what your religion may be; nor indeed that you are interested in religion. Nor is it any business of mine. But whether you are a zealot or an atheist, you will find in the Bible (as actual reading matter) more of keen interest and inspiration and inimitably flawless literary style than in any other book ever written.

Personally, I am a believer in the Bible, although I do not seek to thrust my beliefs on others. To me as a writer, its incomparable style and its power of telling tremendously dramatic stories in a mere mouthful of words would be enough to convince me of its inspiration, if nothing else did.

Read it for its sheer interest, and not merely as a pious duty; and you will find it by far the foremost marvel in all the wonder-world of Bookland.

I told my father about a friend of mine who was never without a book in his hand; who was known as "a great reader"; and yet who was incurably stupid. I could not understand why his incessant reading had not profited him more.

"There is no credit in being 'a great reader,'" my father explained to me, "any more than in being a great eater. Each is a form of gluttony, unless some benefit comes from it. It is not what you eat that counts, but what you can digest and assimilate. It is just the same with reading."

WHEN Father takes out his watch and Mother glances at the clock, it's a good bet that they are wondering whether it is time to turn on the radio for some program they enjoy. Radio is making us a nation of accurate timekeepers; it is also making us punctual in our habits. Public speakers no longer can exceed the minutes allotted to them. "Thanks to the Radio," says Graham McNamee in an article to be printed soon, "Things Now Start on Time."

1800 conversations at once through a cable less than 3 inches thick

An Advertisement of the
American Telephone and Telegraph Company

THE earth beneath our great cities is crowded. Steam, gas, sewer and water-mains, compressed air pipes, pneumatic tube systems, telephone and telegraph cables, light, power and rapid transit conduits lie so close together that any further additions create serious engineering problems. Yet the number of telephone calls that must flash through the underground arteries of great cities is steadily increasing.

The challenge to the scientific minds of the Bell System was to find a way for more conversations in existing conduits. Fifteen years ago, the pride of the System was a cable containing nine hundred pairs of wires. Then by many improvements a cable of twelve hundred pairs was perfected. It was rightly considered a scientific triumph.

Today, cables containing eighteen hundred pairs of wires are in service and these cables with every wire insulated are only two and five-eighths inches in diameter, one-half as large as the first nine hundred-pair cable. Eighteen hundred conversations at once—six hundred more than before—can now pulse through this two and five-eighths inches of cable.

There is no standing still in the Bell System. Better and better telephone service at the lowest cost is the goal. Present improvements constantly going into effect are but the foundation for the greater service of the future.

Save through Provident Mutual

LET a young man start today to lay aside forty dollars a month toward a twenty thousand dollar fund and, if he should die within the month, his dependents would receive just—forty dollars.

But, let him start today to lay aside the same sum toward a $20,000 Provident Thrift Policy and, if he should die tomorrow, his dependents would receive not the amount of his investment, but the amount of his insurance contract—$20,000. Moreover, he himself will receive $20,000 if he lives to age 65.

Why, then, is not life insurance a saner and more certain means of fulfilling an obligation to your dependents and to yourself?

"Coolidge"

(*Continued from page 21*)

remember what a time we had getting somebody for Vice President. It looked like we were going to have to draft the Janitor of the Convention Hall.

"Well, do you know why it was so hard to get one? It was Coolidge—we couldent get him to say who he wanted, and naturally Parties always try to nominate somebody that you wouldent mind being seen with.

"Then, as you remember, they went for Lowden. They even went so far as to nominate Lowden, but instead of making it final they adjourned till 8 o'clock that night till they could hear from him to see if it was O. K. Then he sent his famous Telegram: 'I have said I wont accept the Vice Presidency, and I cant go back on my word.' Then they hit on Dawes and put him over with a bang. But between each one of these nominations and proposed nominations they would phone to Coolidge at the White House and his answer would always be the same—'He is perfectly all right with me.'

"So, when the Convention was over and I got back to Washington, I said to Coolidge, 'Calvin, why dident you tell 'em who you wanted? It would have helped them out a lot.'

"'No, I wasent going to tell 'em a thing,' he answered. 'I just let 'em use their own judgment picking a Vice President. Nobody told 'em four years ago and they did pretty well.' And another nice, quiet little grin from him.

"I DONT know about him running again now, Will. You ask me if he has made any money from speculation. No, not a Cent. He aint the kind that would speculate, even if he wasent President. Of course, a President is supposed to have personal affairs the same as any of us, and what he does with his finances is none of our business. No doubt, he has some of his earnings invested in some good, solid bonds, but nothing of a speculative value that his administration might in some way be accused of helping in value. You know, he just dont look on money that way.

"Now, you take the way he has been raised. His great-grandfather had a Farm, and skimped and saved, and after a lifetime of work left it unincumbered, and a little nest egg of a couple of thousand dollars. Then his son took it, and worked and saved, and left Coolidge's father perhaps eight or ten thousand. Then he works hard, saves and adds to that, and leaves Coolidge perhaps twenty-five or thirty thousand in addition to the farm. Now, that was progressive success. Each one took what he had, added to it, and left more than he started with. Coolidge will add to it and leave his son John quite a nice little fortune. Now, he can do that and when he dies he will know that he has carried out his mission: Live, work hard, be a good Citizen, and add to your savings.

"Here is another thing you can go back home, Will, and pretty near bet on. You wont see him messing into the following administration, if it should be Republican any more than if it happens to be Demo-

Spring! . . *for everyone but her*

n her lovely Newport garden she stood—bitter, disappointed, lonely woman at 33. It was Spring—but in her life there was o romance.

Why was she still single? Once she uld have picked and chosen from many itors. Now she had none. Even time-ied women friends seemed to avoid her. e couldn't understand it . . .

Halitosis (unpleasant breath) is the mning, unforgivable, social fault. It esn't announce its presence to its vic-ns. Consequently it is the last thing ople suspect themselves of having—*but ought to be the first.*

For halitosis is a definite daily threat to all. And for very obvious reasons, physicians explain. So slight a matter as a decaying tooth may cause it. Or an abnormal condition of the gums. Or fermenting food particles skipped by the tooth brush. Or minor nose and throat infection. Or excess of eating, drinking and smoking.

Intelligent people recognize the risk and minimize it by the regular use of full strength Listerine as a mouth wash and gargle. Night and morning. And between times before meeting others.

Listerine quickly checks halitosis because Listerine is an effective antiseptic and germicide★ which immediately strikes at the cause of odors. Furthermore, it is a powerful deodorant, capable of overcoming even the scent of onion and fish.

Lambert Pharmacal Co., St. Louis, Mo., U. S. A.

★ **Full strength Listerine is so safe it may be used in any body cavity, yet so powerful it kills even the stubborn B. Typhosus (typhoid) and M. Aureus (pus) germs in 15 seconds. We could not make this statement unless we were prepared to prove it to the entire satisfaction of the medical profession and the U. S. Government.**

***Winning* new users by thousands. Listerine Tooth Paste. The large tube 25¢**

On the air!

Ben Bernie and his Mennen Men

Dance to their music every Thursday at 8:30, eastern daylight time, on the N. B. C. network stations—
WJZ, KDKA, WLW, WBZA, WBZ, WBAL, WHAM, WJR, KYW, KWK, WREN

Here is Jim Henry, Mennen salesman, talking to Ben Bernie. Mr. Bernie and his orchestra are famous for their animated and witty radio performances, and their tingling dance music.

BEN BERNIE tells Jim Henry

"I keep my face in tune with MENTHOL-ICED shaves"

"JIM, I play before a 'high-hat' New York audience every night. And believe me, it's hard, hot work to lead a band through 17 jazz numbers! But—when I have started the evening with one of your *cool* Menthol-iced shaves I feel fit as my fiddle at the finale . . . The minute the lather goes on, I can feel my face cool down . . . and my spirits go up. Since I've started using Menthol-iced, there's close harmony between my face, my lather and my razor! . . ."

Mennen Menthol-iced
The Young Man's Shave!

COOLNESS—refreshing, invigorating, mountain-breeze *coolness* — that's what makes Mennen Menthol-iced unique—*absolutely different from any shave you've ever had!*

Mennen Menthol-iced Shaving Cream has Dermutation—the exclusive Mennen process of softening the beard and toning the skin. Dermutized shaves are smoother, quicker, easier shaves!

Try this *modern* pep-up shave. Send for free trial tube.

After the shave!

As a finishing touch to a perfect shave, *Mennen Skin Balm*, the modern fragrant freshener for the skin. Removes "face shine." Send for trial tube.

Mennen Talcum for Men, the neutral tint man's powder that doesn't show . . . Great after a bath too!

MENNEN MENTHOL-ICED REG. U.S. PAT. OFF. **SHAVING CREAM**

P. S. Mennen's Shaving Cream is also made without menthol. It comes in the green-striped carton. Use either cream for a smoother, snappier, happier shave! Jim Henry

Free 14 COOL Shaves!

Let Jim Henry send you a trial tube of Mennen Menthol-iced — and Mennen Skin Balm. Just write your name and address in the margin below, tear it out, and send it to Jim Henry, Mennen Co., Newark, N. J., Dept. D-4.

cratic. There will be none of the Roosevelt-Taft combination there. When he passes it on, it's ON.

"No, he said to me one time when we was kinder talking into the future, he said, 'This Country got along long before they ever heard of me, and they will get along long after I am forgotten.' You see, he has never lost his sense of proportion. He dont think that he is any greater than he was before he went in.

"Did I ever tell you about what my instructions were from President Coolidge when I come down here? Well, I couldent get anything out of him about just what I was to do, so finally I had to come right out and ask him. I was just about ready to go to the train, and here is what he said: 'Dwight, dont jump on Mexico. Just keep Mexico from jumping on us.' Now, it would be pretty hard to write a hundred-page Note to an Ambassador and give him any sounder advice than that. You know, he can say more things in less words than anybody.

"THEN, another thing that Coolidge realizes better than anybody is this: He knows that he come into the Presidency from the Vice Presidency, where nothing is expected; he knows that he dident look like much when he arrived; he knows that even the Atheists, after looking him over, prayed for the salvation of the country. So he knows that anything that he did was a surprise, and he knows that he come into our public lives when we had had just about all the Government laws and advice that we needed. He saw that the less he did the more satisfied we would be with him.

"Well, it takes a smart fellow to do nothing, especially when you would perhaps look bigger at the time if you did do something. He knows that the next man that goes in cant get away with the same tactics. Every game and every Administration calls for different plans.

"Why, do you know even his personality (or what lots of them called Lack of Personality) was in his favor? You take one of those Office Seekers going in to see Harding or Taft or Roosevelt or any of those congenial fellows, and they had to be friendly and take up lots of their time. If they dident do that the old Office Seeker would come out sore. But with Coolidge, what they have heard and know of him, if they get in, and he even looks at 'em, why they think he has made a big concession, and are so tickled that they forget to ask about the office, they are in such a hurry to get out and tell their friends, 'Why, he come pretty near shaking hands with me, and started to say "Hello!" Say, he aint a bad fellow at all. Where do they get that cold stuff?'

"That's why he has been able to physically stand the strain better. This reputation he has, has kept millions of pests away from him.

"No, I think you are wrong, Will, about him going to run again. Course, here is something he might do. Lay out for a while, and then? You see, his age will permit him doing that; he is not an old man, and wont be till several elections have passed, so just remember that in your predictions. And, say, we better go to bed; we got to get up early in the morning. Good night."

"Oh, say, Mr. Morrow, I see by the

NOTHING ROLLS LIKE A BALL

One of the outstanding reasons for the predominant use of the ball bearing in machinery of every description is its economical performance—economy that has a direct effect on overhead and reaches way back to the coal pile.

The New Departure Ball Bearing saves power because it is practically friction-free. Economy is enhanced because wear is negligible, adjustments to take up wear are never necessary, machine life is longer and machine performance is uniformly accurate. This means minimized fuel costs, repairs, replacements, lubrication attention, maintenance expense—in all manufacturing processes.

These inherent economic advantages explain the fact that in spite of the higher original cost of New Departure Ball Bearings, their use is becoming more and more universal in every type of machine and every kind of industry.

"I found its flavor so much finer"*

*..and it brought him an unexpected reward...in *health*

"I was not run down, my nerves were not exhausted, my sleep was peaceful, and I took my caffein regularly. I was not aware that it was harming me. At the home of a friend one day, I was served Postum and found its flavor so much finer than that of caffein that it has been our regular mealtime drink ever since.

"Less than thirty days after my first cup of Postum, I became conscious of an improvement. My complexion was not amazingly cleared, I could not play tennis any better. The simple truth was that at night I was not as tired as formerly. Apparently caffein had caused a drain on my nervous system and my healthy body responded when this load was lessened.

"The result is that I have much more strength at the end of the day. When Postum can improve a healthy body, it is in Postum's favor that I must write."

S. G. Leaming, R. F. D. 1, Westerly, R. I.

This very day, you may have told yourself, "I never felt better in my life." But how do you know you're at the peak of health? How can you be sure when your diet contains an artificial stimulant that, without ever warning you, is sapping your reserve of nervous energy, wearing you down?

There is one way to find out. Eliminate caffein from your diet for thirty days—drink Postum with your meals instead! Then take stock! See if there isn't an added spring to your step—see if you don't feel fresher at the end of the day.

You'll enjoy Postum for itself as much as you enjoy its wholesome after-effects. Postum is made of roasted whole wheat and bran. A drink with a rich, delightful flavor—mellow, appetizing. Millions prefer Postum's flavor to that of any other drink! And they're safe no matter how much Postum they drink. Postum contains no trace of any artificial stimulant—nothing to attack nerves, interfere with sleep, impair digestion.

Postum costs less than most other mealtime drinks—only one-half cent a cup. Your grocer has it. Or mail the coupon—we'll send you one week's supply free, as a start on your thirty-day test. Please indicate whether you wish Instant Postum, made instantly in the cup, or Postum Cereal, the kind you boil.

MAIL THIS COUPON NOW!

Postum is one of the Post Food Products, which include also Grape-Nuts, Post Toasties, Post's Bran Flakes and Post's Bran Chocolate. Your grocer sells Postum in two forms. Instant Postum, made in the cup by adding boiling water, is one of the easiest drinks in the world to prepare. Postum Cereal is also easy to make, but should be boiled 20 minutes.

papers where Lindy is coming to Mexico. When is he coming?"

"President Calles and I wired him to visit Mexico and we got an answer: 'Will be there the first clear day.'"

"Well, I better be getting out, 'cause he will be wanting my bed," I says.

I dident see the Morrows any more till a couple of months later when I saw them in Havana, during the Pan-American Conference, and Coolidge was there. Funny thing happened there that Mr. and Mrs. Morrow told my wife and me about. There was a big State Dinner given at the President of Cuba's Palace the night of Coolidge's arrival. The Coolidge's quarters were there in the same building. After the dinner was over and the guests were leaving, the Coolidges invited the Morrows up to their apartments. Well, they were up there talking so long and there was such confusion in the guests leaving that no one knew they were still there. When the Morrows went to leave, to go to their Hotel, the big old Palace was all dark and nobody knew how to get down. Coolidge was prowling around trying to show 'em some stairs. Then they couldent find their wraps, that had been left in the check room and it was shut up. Then they had to wake up the night watchman to get out. Coolidge said, "If this Palace is all located in Cuba, Cuba is bigger than you think."

When the big Battleship Texas steamed into Havana Harbor on that beautiful Sunday afternoon, and through thousands of cheering mobs the Coolidges were driven to this Palace, they were showed to their quarters. Coolidge dident pay any attention to any of it, then looked around and said to Jarvis, the head Secret Service man, "Where's the Baggage?" During the hurrah of the welcome in a Foreign Country he wasent going to have some guy cop the old valise on him. The old days of coming into the Boston Station with an extra shirt in the bag in case the Legislature held over for a fall session was on his mind.

Course, one of the best ones was on last Inaugaration Day when he and Mrs. Coolidge was leaving for Northampton. It was raining cats and dogs, with thousands out in the rain. They got to the Station, got into their private car, and as they sit down he says to Mrs. Coolidge, "Grace, I bet a lot of 'em got wet today." And when he asked Mrs. Coolidge, when she was packing all her dresses, what she was going to do with them when they got to their house in Northampton, she said, "Why, I will put some of them in the cubboard."

"You better put 'em in the rooms and we will live in the cubboard," he says.

And when they got to Northampton that rainy morning, and the New Englanders were down to meet him after twenty-five years of splendid service, starting with being Mayor of that very town and winding up with running our Nation, well, there was a little band blowing away, and it's raining down their horns, and Mrs. Coolidge, rather overcome by her townfolks' reception, says, "Listen, Calvin, they are playing Home Sweet Home," and Mr. Coolidge replied, "Is it?"

Now, here is the last Morrow story I am going to give you. It was when he was up here just before Mr. Coolidge left the

First aid

to mothers in safeguarding baby's health

Frigidaire reduces risks that come with sultry days . . . . . .

"Watch baby's health in summer!" Down through the ages grandmothers passed this warning on to mothers. For with summer came the "critical period" . . . a time when even a symptom of illness brought grave anxiety.

For years mothers faced warm weather with dread. The dangers that confronted their children were *mysterious* dangers. They knew not *what* to guard against.

But how different it is today! There's nothing mysterious now about the risks that come with summer. It's simply that foods spoil more quickly and bacteria develop more rapidly. And to meet these risks, health authorities everywhere prescribe better refrigeration . . . and you can provide this better refrigeration with Frigidaire . . . the automatic refrigerator which is powerful enough to keep food at temperatures well below 50° . . . always.

The Frigidaire Cold Control
A development of Frigidaire and General Motors engineers. Found only on Frigidaire.

Power that gives a wide margin of safety

Frigidaire operates automatically. It has the *surplus power* that keeps foods fresh and wholesome . . . that safeguards health day and night, summer and winter . . . unfailingly.

This surplus power means added safety . . . the difference between certainty and doubt . . . and as more than 750,000 Frigidaire users will tell you . . . a feeling of security beyond all price. Call at the nearest Frigidaire display room and see the exclusive features of Frigidaire, including the new Cold Control . . . find out about the low prices and liberal G.M.A.C. terms.

Safe and unsafe refrigeration explained in free book

We have just prepared a new book on healthful refrigeration. It is illustrated with photographs taken through a microscope. Mail the coupon today for your free copy and also a copy of the new Frigidaire Recipe Book.

Powder

"Cleans Teeth Best"

Just ask your dentist

When you go to your dentist to have your teeth cleaned . . . what does he use?—POWDER!

If, like your dentist, you are interested in really clean teeth—and safety—use what your dentist uses . . . for he knows best.

There is nothing known that will clean and polish teeth so quickly, and leave them so gleaming white—as POWDER.

Powder—is the one thing that all forms of dentifrice must depend upon for cleaning.

As powder is the essential cleansing part of any dentifrice; a dentifrice that is . . . ALL POWDER . . . just naturally cleans best.

In use over 60 years

Established 1866

For over SIXTY YEARS, since 1866, dentists everywhere have prescribed Dr. Lyon's Tooth Powder, because—teeth . . . simply cannot . . . remain dull and film coated when it is used. It cleans off all stains and tartar, and polishes the teeth in a harmless and practical way that gives them perfect whiteness.

It cannot possibly scratch, or injure, the softest enamel . . . as SIXTY YEARS of constant use has shown. Dr. Lyon's is the only dentifrice old enough to prove it can be safely used for life.

Dr. Lyon's Tooth Powder keeps your teeth REALLY CLEAN, and clean teeth mean firm, healthy gums and the least possible tooth decay.

Brush your teeth with it regularly—consult your dentist periodically—and you will be doing the very utmost to protect your teeth.

Once you use tooth powder, you will never be satisfied to use anything else.

Tooth powder leaves your teeth feeling so much cleaner, your mouth so refreshed, and your breath so sweet and pure.

Dr. Lyon's Tooth Powder is not only more efficient, but it costs . . . much less . . . to use.

A package lasts over three months.

White House. He told it to me in my dressing-room. He is a guest at the White House and they are talking about this and that, and Coolidge remarked, "I just found out, our Government does do something in the way of a pension for its Ex-Presidents. We can send our letters for nothing. The only thing about it is, nobody wants to hear from us then."

A few nights ago, Everette Sanders, his very efficient and popular Private Secretary that served him so well at the White House, was back in my dressing-room and told this: It was in the morning about seven. Coolidge is walking along the back of the White House and there is three men sitting on the lawn. "What are you fellows doing here?"

"Why, we are going to fix the boiler; we are just waiting till 7 o'clock."

"Oh, you are working here?"

"Yes, sir, Mr. President."

"Well, you better put out a sign then."

OH, YES, I dident tell you the one that Morrow told me, about what he said about the Klan. The Ku Klux Klan argument was getting pretty hot in Politics and some of the papers was writing Editorials about what he should do about it. He told Morrow, "They put the Klan in Politics; now they want me to take it out."

Then, dont overlook his famous one: "A lot of people think the war is over. The war aint over till the debt is paid."

Jim Wadsworth told me a good one. He had to take one of these old busy Widows, that was promoting some Bill, for personal and publicity purposes, in to see the President.

She started right in trying to flatter him—"Why, Mr. Coolidge, you look much younger than your pictures give you credit for; there is much more color in your face than the Pictures show."

"Yes, guess I will have to change my Powder."

Well, this old Gal being all powdered and painted up, that knocked her back, but not out. She starts telling him about the Bill she wants indorsed—"in fact, Mr. Coolidge, your own State of Massachusetts I think endorsed it."

"Yes, I wrote it," and sure enough he had; he had introduced it himself up there years before.

Now, I wouldent have told you all these things, but he got to telling about himself in the magazines and I knew he wouldent tell ALL. Course, I feel like I ought to give Morrow the check for this article, for he give me all the Stories, and if he needs it I will give it to him.

Course, to me the crowning achievement of Mr. Coolidge's entire career has been that he could find a House to rent for $42.50 a month. That's not Statesmanship, that's a Miracle.

Then, people ask you every day, "Has Coolidge got Humor?" Say, he has more real, downright, subtle humor than anyone we have in public life. We have had many little laughs at him and his rather eccentric ways while President, but for every one we have had at him, he has had a dozen at us. If he would sit down and write the funny things he saw while in there, then you would have a real masterpiece in humor. He saw 'em—dont forget that. Many a laugh those serious Senators must have handed him.

Yeast rids the body of constipation poisons

says Health Director *of* Los Angeles

DR. GEORGE PARRISH

"Constipation is the bane of existence—the enemy of the human race. Yeast relieves constipation by stimulating the intestine, not by irritating it. It benefits the entire system by eliminating the poisons and waste products of the body . . . Yeast is an easily digested food with medicinal value."

George Parrish

WELL-KNOWN HEALTH OFFICER *of Los Angeles, Calif., for eight years Health Commissioner of Portland, Ore.; former lecturer on Public Health at the University of Oregon Medical School; for five years connected with the St. Louis General Hospital; Vice-president, Western Branch of American Public Health Ass'n.; member, Los Angeles County Medical Ass'n.; past-president, Medical Society of Portland, Ore.*

GUARDING the health of thousands is the responsibility of Dr. George Parrish, well-known physician and Health Officer of Los Angeles.

From more than seventeen years of experience in public health and hospital work Dr. Parrish concludes that "constipation is the bane of existence—the enemy of the human race." To combat the poisons from clogged intestines he advocates the corrective food, fresh yeast, thus confirming the experience of physicians throughout Europe and America. In a recent survey, half the doctors reporting said they prescribed fresh yeast for constipation and related ills.

Fleischmann's Yeast is as fresh as any garden vegetable. Unlike dried or killed yeast it contains millions of living, active yeast plants which in their passage through the intestine combat harmful bacteria, purify the system. Digestion improves. The complexion clears. Stamina and resistance are increased.

Start today! Eat 3 cakes daily, one before each meal or between meals: plain or in water, cold or hot (not scalding). To get full benefit you should eat yeast regularly and over a sufficient period of time.

Buy two or three days' supply at a time and keep in any cool, dry place. At all grocers and many leading cafeterias, lunch counters and soda fountains. Write for latest booklet on Yeast in the diet—free. Health Research Dept. J-65, The Fleischmann Company, 701 Washington St., New York City.

THE DIGESTIVE TRACT is a continuous tube, from throat to large intestine. Here 90% of ills start, as poisons from clogging food wastes flood the system and attack you in your weakest spot. But here Fleischmann's Yeast works, keeping the colon clean, active, healthy — checking the poisons of constipation.

What a cigarette meant there

The actors play their part— and history moves thrillingly across the silver screen. But on the movie lot, how tense the days of strain! And how gratefully welcomed those hard-won moments that mean rest, relaxation . . . and a cigarette!

What a cigarette means *here*

They play their part, too— these buyers of Chesterfield tobacco.

Thousands of pounds auctioned each day; distinct types of leaf—twenty grades of "bright" tobacco alone; important distinctions of curing; differences in texture, color, size, in the natural sugar which means natural sweetness—and Chesterfield quality to be maintained.

Our buyers do their part. In New York or Manila, Paris or Alaska, our billions of Chesterfields taste the same. The same wholesome fragrance, the same natural mildness, the same satisfying "body," because our buyers know exactly what they want—and whatever it may cost, they *get* it!

Liggett & Myers Tobacco Co.

Typical scene in tobacco auction warehouse, where the farmer's work ends and the manufacturer's begins.

General's Newest Achievement Surpasses Yesterday's Fame

A greater step-up in mileage ~ A fuller use of balloon low-pressure

General's reputation for big mileage has always been the outstanding guide to top-quality. With the *Dual*-Balloon "8" yesterday's fame has been surpassed. Twenty thousand, forty thousand, sixty thousand miles. No tire of anything like its great mileage capacity can compare with its low-pressure advantages. The *Dual*-Balloon principle has made possible for the first time the combination of the two most important features—all the mileage you want—and all the comfort. And beyond this there is the added safety of non-skid permanence, season after season—the peace of mind that knows no fear of punctures and the pride of knowing that your car travels on the best that long experience can build into good rubber.

How You Can Make Your Speaking Voice Attractive

(*Continued from page 19*)

the changes on 'yes' and 'no' is a lawyer's favorite sport.

"Physicians are trained in therapeutic voice value, and the bedside manner has the bedside voice. How vital this is to recovery probably you can testify. You want a calm, controlled, equable doctor, whose voice suggests the crystallization of the medical wisdom of the ages.

"The tones of a mother to her children, more frequently than her acts, determine her relation to them. The woman who has self-control and the common sense to talk of her children's misdemeanors in controlled tones, low and sweet, stands just twice the chance of making them come to the desired end.

"But the everyday, irritated mother tones, shrill, high, fault-finding, are, like the shrill voices of the subway and train, almost universal. Frequently, when a child's nervous system is none too strong, and when his affections are deep, the result is serious. I had one pupil who stammered, a boy in his teens, sent to me by his physician. After several consultations, the physician and I decided that under the strident tones of the mother, the boy stood no chance of cure. He was sent to an aunt and uncle, both people with gentle, kindly, placid voices. In one year he was a new boy, and the restoration of his nervous equilibrium, plus some humble care on the part of his contrite mother, made the cure permanent.

"ONE young man sent to me by his father had excellent business prospects. His father's firm was a selling organization and the youngster was trying to learn the business from the bottom up. But try as he might, his sales record was poor. He was a bright young fellow and he analyzed his failure.

"'I can't seem even to get the customer's attention,' he said. 'He will greet me all right, but after a minute he will somehow get away from me. Sometimes he actually walks off while I am talking. I think it's my voice.'

"He had a throaty voice, reedy and sharp, and it strained your ears to listen to him. He worked faithfully to improve that voice. In time—it took considerable time in this instance—the voice deepened, the sharpness vanished. The happiness and confidence of the young man put an entirely new quality into his tones. He began work on his voice four years ago. Last spring his father reported that the business had trebled in volume and that the young man was virtually the manager of the whole affair.

"Stand outside the door at any social gathering and you will see how little we have to lose in attempting to cultivate our voices. The tones that assail the ear are sharp, tense, throaty, clacky, and brittle.

"We Americans are a muscular people. We are in the virility of our first youth and our muscles move in emotional response to a stimulus before our thought process

DIRT WIPES RIGHT OFF

THIS PAINT ENAMEL—

THE VOGUE for white and light-tinted interiors is hard to reconcile with the difficulty of keeping ordinary paint clean! But thousands have solved this problem by using Barreled Sunlight, the paint enamel that *protects its own beauty.*

No matter how much grime filters indoors—and there's plenty of it today—Barreled Sunlight is proof against permanent soiling. It has no "pores" to hold dirt embedded. Smudges are easily wiped off with a damp cloth.

For sheer beauty alone, many people prefer Barreled Sunlight to any other finish. It has a rich "depth" peculiar to itself.

Extremely easy to apply—flowing freely and evenly, without "laps" or brush marks. Unusual too in its opacity, or "hiding power."

Ordinary Flat Finish White Paint

Barreled Sunlight Gloss Finish

The Microscope Shows Why—

These photographs of paint surfaces were made through a powerful microscope. The astonishing contrast shows why Barreled Sunlight is so easy to keep clean. Smooth, unbroken and non-porous, it resists dirt and washes like tile.

BARRELED SUNLIGHT

Reg. U. S. Pat. Off.

Gloss, Semi-Gloss and Flat Finishes. All-sized cans and drums. Readily tinted any shade. Where more than one coat is required, use Barreled Sunlight Undercoat as the first coat. See coupon.

Also ask your dealer or painter about the new exterior paint, Outside Barreled Sunlight, which is lending new distinction to white-painted homes everywhere.

U. S. Gutta Percha Paint Co., 33-Q Dudley Street, Providence, R. I. Branches: New York—Chicago—San Francisco. Distributors in all principal cities. More than 7500 retail dealers.

A pure, lustrous white—easily tinted any shade

You can easily tint Barreled Sunlight any shade you wish. It is an "all-oil" product and blends readily with any good oil color, producing beautifully clear, lasting tints. Dealers carry handy tubes of Barreled Sunlight Tinting Colors. Quantities of five gallons or more are tinted to order at the factory, without extra charge.

gets to its conclusion. Such a combination makes for throat sounds in which the tongue and lips play little part. As a result, our articulation is faulty.

"For ordinary conversation we need just six tones. These will not express the whole gamut of human emotion and experience, but we do not desire to express the whole of life in an ordinary conversation. The majority of people use twelve tones to express everyday affairs and have no superlatives left for the unusual. Most of us talk as high as we can without cracking our voices. If you have anything of a musical ear, go to the piano and match up your natural tones. You will find your own register. Take the six tones that come low without straining, and work on conversation in those tones.

"*You* hear your own voice. Its tones, its timbre, its timing, have a profound effect upon *you*. If you doubt this, stand in the center of a room with your face to the angle of the wall and repeat with explosive force:

"'How dare you!'

"You get a distinct emotional reaction. Repeat the same words calmly and they sound absurd. Certainly you respond not at all to the words, but to the tone.

"When you produce a thought in speech that is low-toned, clear-cut, and finely articulated, that thought passes in clear-cut, fine mental pictures to all hearers, yourself included.

"The difference in speech between people who are governed mainly by emotional reactions and those who are governed by their mental processes is usually, almost universally, this:

"Emotionally governed people produce full, round vowel sounds, but slur their consonants; intellectually governed people produce clear-cut consonants.

"Hesitations in speech, hemming and hawing, 'a-ahs' and 'if you pleases,' and the 'see?' that has been so prevalent for years, testify to poorly focused mental pictures which the speaker is trying to put over with great mental effort. There is a very simple habit which, if persisted in, will cure this hemming and hawing and 'seeing.' It is this: Get what you want to say straight in your own mind before you try to pass it on to anybody else.

"PEOPLE who speak too slowly, who allow the concept of what they are saying too much time to make its home in your understanding, are a great source of annoyance and irritation. They really insult the intelligence of their listeners. A good talker responds in tempo to the light in the faces of his listeners.

"A too rapid talker nullifies what he is saying by his too excitable, too eager presentation. His listener is always suspicious of what must be presented in such haste. If the talker is a man who thinks more rapidly than most other people, he will have a hard time of it. For if his words are to have effect, his thought *must be attuned to their powers of perception*. If he keeps on being too swift for them, the result of his talking is a scattering of ideas, all out of focus. He hurts the pride of his listeners and embitters them.

"About the great cities we have what I call the 'suburban' voice. The repressions of genteel poverty, the urgent keeping up with the Joneses, the fear of missing the 'best' things, and the severe self-discipline

Proving that distinction in automobiles is not a matter of price

The 2-Door Sedan • Body by Fisher

Not long ago, when you bought a low-priced car, you received a low-priced car and, to all outward appearances, nothing else. But now that condition has changed. The New Pontiac Big Six has brought big car appearance into the low-priced field. It is proving that distinction in automobiles is not a matter of price.

For in the New Pontiac Big Six you find the smart proportions and the rakish contours of a beautifully modeled Fisher body. You find flaring fenders, comparable to those on the finest cars produced today. You find a distinctive chrome-plated radiator, a sweeping hood, a rear view of attractively low and graceful lines. And you find all these in addition to the performance, long life and mechanical superiorities for which the Pontiac is famous everywhere.

Progressive Americans have discovered in the New Pontiac Big Six the car they have long been seeking. It satisfies their desire for beauty, style and big car performance. And it enables them to *step up* the quality of their cars without leaving the low-priced field.

Pontiac Big Six, $745 to $895, f. o. b. Pontiac, Michigan, plus delivery charges.

OAKLAND MOTOR CAR COMPANY, PONTIAC, MICHIGAN

Consider the delivered price as well as the list price when comparing automobile values. . . . Oakland-Pontiac delivered prices include only reasonable charges for delivery and financing.

Why try to GUESS which Tire is Best ?

This tire was first built to stand abuse . . . then bonded against abuse

IN the maze of claims and counter-claims, how can you be sure which tire will give you the most trouble-free service.

Certainly you can't tell by appearance. Look at any five tires without knowing the names or prices. You cannot even guess which tire is best.

But here is one way you can cut straight to the heart of the question. Dunlop Tires are first built to stand abuse, then to prove this, they are bonded against abuse.

Every advantage of the world's greatest tire-building experience . . . 40 years of it . . . goes into each Dunlop Tire. Every step of the manufacture is guarded by skilled craftsmen.

Only long-staple Egyptian cotton for maximum strength . . . only cords woven in Dunlop's own mills at Utica, N. Y. . . . only the very finest processed rubber . . . go into each Dunlop Tire.

Dunlop users know this extra quality. But Dunlop leaves no doubt.

Dunlops BONDED, even against abuse

SURETY Companies are the most prudent people in the world. Their job is to safeguard other people—bond banks against embezzlement and forgery—guarantee everywhere *faithful performance of duty*.

So Dunlop Tires are bonded by a Surety Bond, backed by both Dunlop and the American Surety Company.

This bond guarantees Dunlops against almost every conceivable tire hazard, even abuse.

Takes the guess out of tire-buying

UNDER the Surety Bond Plan, you know exactly what you are getting—a tire built to make good, then guaranteed against almost every tire hazard.

A guarantee so sweeping in its statements—so simple that any Dunlop dealer makes good in his own store—instantly.

Naturally, such a guarantee has aroused wide-spread interest. To answer the many inquiries, we have prepared specimen Bonds. One is ready for you now. It is free. Mail the coupon below—a free specimen Bond will come back by return mail.

DUNLOP

THE DUNLOP TIRE AND RUBBER COMPANY
Department 603 A, Buffalo, N. Y.

and sacrifice essential to this end, result in voices denied free expression. They are forcedly friendly, aggressively eager, strident, hoarse from talking above train noise instead of below it.

"The curious thing about it is that if I could take a hundred of these people and work with them on voice control for a year they would show, not only a marked difference in their voices, but also in their emotional response to life itself. The voice and the emotions are much more closely allied than the sense of sight and the emotions; we seldom respond to a magnificent sight as we do to all magnificent sound. So responsive are most of us to the power of tone suggestion, that taking the hurry out of one's voice results in distinct nervous benefit and the release of mental powers of judgment clouded by hurry. Putting balance into the voice even by the mechanics of exercise will put poise into the whole human being. Think over the people you like, the people who rest you, the people who are always welcome. I am willing to hazard that they all have well-controlled, low-pitched voices.

"To convince yourself of the emotional response to voice tones, try this experiment. The next time you meet an angry or irritated man who has raised his tone, increased his tempo, look out! So quickly do you respond to the suggestion in his voice that you are likely at once to raise *your* tones and quicken *your* time. Be on guard and carefully lower your voice and slow up your utterance. Then watch his anger or irritation diminish.

"Men and women who work through the telephone or who deal directly with complaints, such as complaint clerks and adjustment clerks in large stores, need the soothing quality of low tones and slow speech to protect their own emotions as well as to quiet the aggravated persons talking with them. The heads of several great organizations have arranged for their employees to take instruction in voice control.

"SOME of the remarkable voices of human beings seem never to leave our memories. No one who saw and heard Sarah Bernhardt will ever forget her voice, as flexible to her will as the bow of a violin to its master.

"Many of our prominent business men have remarkably well-developed voices, which through long practice are admirably controlled.

"Floyd A. Allen, vice president of the General Motors Corporation, has an unusually fine speaking voice. Matthew Scott Sloan, president of the Brooklyn Edison Company, has an unusually good voice well under control.

"A face, however, is a poor criterion of a voice. One is likely to expect a fine appearance from a good voice rather than a fine voice from a good appearance. Bernard Shaw would never have had years of hard work living down a reputation for satirical, snobbish aloofness had we heard him when we read him. His movietone audiences love him. His voice was a revelation. Deep, full, friendly, warm, it gave a new aspect to his most radical writings.

"Mussolini's wonderful voice made him fewer friends; for his incisive tones, indicating clear thinking, intense emotional power, with personal magnetism highly

Just ask for "Ethyl"—
I add snap to any car.
Ethyl

THE owner of a $5,000 automobile and the owner of a $500 car have two things in common: both want to get the best out of their cars; both depend on gasoline to make their engines go.

But no engine can be better than the fuel it uses, and all gasolines "knock" and lose power when the compression of an engine is raised beyond certain limits.

So General Motors Research Laboratories set out to find something which, when added to gasoline, would eliminate "knock" under higher pressures and thereby make possible more efficient automobile engines.

Seven years of search, involving thousands of different compounds, resulted in Ethyl fluid, the anti-knock compound which leading oil companies are mixing with good gasoline to make *Ethyl Gasoline*—the standard high compression motor fuel. The active ingredient in Ethyl fluid is tetraethyl lead.

Since Ethyl was made available to the motoring public, automobile manufacturers have been able to offer cars of higher compression. And Ethyl gets out of cars of average compression an additional power which cannot be obtained with ordinary gasoline.

Try Ethyl Gasoline today. You will see the difference. The first tankful will convince you of its merits.

developed, were nevertheless too dogmatic for the taste of democratic Americans. We vastly prefer the incisiveness of a voice like that of Dr. Parkes Cadman, whose forceful, clear-cut tones nevertheless indicate to the listener that he knows that the listener, too, has something to say, and that he respects it. Harry Emerson Fosdick is one of our voice artists. His voice has a beautiful melody of its own, and its modulation is as fine as that of an instrument played by the most skilled musician.

"Don't get an idea that because you are developing a different voice, you are losing your personality. Listen to the actors and actresses you love best. All of them have trained voices. All of them speak or are supposed to speak in what is accepted as a universal diction, which means that an accepted standard of articulation and pronunciation obtains on the stage. But with all this standardization, how different are Ethel Barrymore's husky tones from the springlike ones of Marilyn Miller.

"You lose nothing in personality by training your voice," said Mr. Van Campen. "On the contrary, you gain, for you have control of a new power of self-expression."

THE following exercises were given to me by Mr. Van Campen for readers of THE AMERICAN MAGAZINE. He says:

"Do you want to get acquainted with your own voice? Try these exercises."

Exercise 1

Pick out a good easy-chair with big arms. Sit down with both feet on the floor and lean back until you are reclining with both arms resting on the chair arms. Take three deep, slow breaths.

Extend arms over chair arms with fists clenched, meanwhile holding body taut and rigid. Lift the body on the rigid arms, keeping taut. Hold for thirty seconds. Let go all over.

You will sink way down. Take, easily and lazily, three long, deep breaths.

You are ready to use your voice. Recite aloud in full tones something you like. Try the last stanza of "America." Keep your body at ease. Use only your voice.

If you perform this exercise correctly you will probably be amazed to find out how much voice you have and how easily you can produce a volume of sound. Probably you will also be surprised to find out how much better your voice sounds than it does in daily work.

You are giving your voice a chance, perhaps for the first time since you have grown up.

We nearly always speak with much unnecessary muscular effort in trying to produce tone. In our throats is a most wonderful sound box, so wonderful that in teaching business men to use their voices I keep by me a model of the human throat and use it to show the really marvelous construction we use when we speak.

Exercise 2

Continue in the relaxed position in your chair. Place the first three fingers of your right hand (if left-handed, use left hand) on the soft spot below the breast bone. Press in sharply and at the same time pant like a dog.

Don't feel ridiculous. According to scientists, the greatest difficulty in the way of adult learning is the fear of feeling or looking foolish. Of all our absurd fears, this is the most absurd. Remember that great statesmen and great bankers, lawyers, ministers, and the presidents of the country have sat as you are sitting and repeated this or a similar exercise. The less foolish you allow yourself to feel, the better work you will do with your voice. Repeat the exercise for five or ten minutes. You now realize that your diaphragm controls your breath.

Exercise 3

In the same position in your chair, place your right hand on your diaphragm, your left hand on your chest. Take a deep breath. Then repeat aloud in full tones, "Ha! he! hi! ho! hoo!" Repeat "How *old* are you?" Give *old* the emphasis and you will feel your diaphragm move in response to your order.

Repeat, changing the emphasis:

"How old *are* you?"

"How old are *you*?"

"*How* old are you?"

This sentence is selected because it is easier to feel the diaphragm in full play when pronouncing words that begin with *h*, or with a vowel. A practiced student will feel diaphragm response on all sounds. Its movement gives your lungs more or less room to fill with breath and so makes for volume or lack of it in your voice. In extreme emphasis you find violent diaphragm action.

Exercise 4

Rise. Take your face in your two hands with the fingers straight on each side of the jaw. Open and close mouth as if to chew, but hold your jaws taut. Then let your lower jaw fall, as in a big yawn. If you relax, you will scarcely feel your muscles move. A relaxed jaw is essential in voice control.

Repeat aloud, holding your face in this fashion and exaggerating the sounds:

"m-m-m-my m-m-m-ay w-w-w-y w-w-w-way"

Repeat for five to ten minutes.

Exercise 5

Keep standing.

Rest your hand easily on your chest and read aloud something you like. Try different pitches and feel the vibration through the bony cavities of the chest. Emerson's Essay on Self-Reliance makes excellent reading.

Find out your lowest natural pitch and stick to that. When your voice raises, lower it and feel your vibrating response.

I might say that the best room for voice exercise is a bathroom. The air is moist, the walls are bare. In exercising in another room, choose walls as bare as possible and fix yourself facing an angle of the walls, at a distance of ten feet.

Exercise 6

Stand facing mirror. Draw your lips back as far as you can with ease. Then push them forward as far as you can, with ease. Repeat, exaggerating the sounds:

"oo—wee"

"oo—wy"

Join these sounds:

"oo—we—oo—wy"

The stretching of the lips back and forth is to sensitize them and make them ready for use in enunciating words.

Exercise 7

More lip work. Bring lips together. Repeat, exaggerating the sounds and saying them slowly:

"bee—bee—bee"

"Buy both books."

"me—me—me"

"Make more money."

"Poppy—puppy—poppy—puppy."

"Peter Piper picked a peck of pickled peppers."

These sentences develop lip flexibility. If you do not like them, invent your own, using the first letters given.

Exercise 8

Work on consonants: d, n, s, t, and z.

Consonant sounds are deliberately made, or else, as with so many of us, they are *not* made, and a slovenly speech results. In making these sounds the tongue helps. It should be firm but not tense.

Repeat, carefully making the consonants:

"did, nun, sauce, tot, says, jazz"

Exercise 9

No one ever expressed word placing better than Shakespeare, when he advised the players:

> Speak the speech, I pray you, as I pronounced it to you,
> Trippingly on the tongue.

We are a muscular people, and muscular folks try to make their words in their throats, the muscles of which are much more powerful than those of the tongue. This exercise will help you to place your words effectively. Place the tips of your little fingers in the corners of your mouth and draw your lips gently back, keeping them soft and flexible.

Repeat:

"Yes, indeed, it is."

You can hear how the sounds ought to be made when the fingers are not there. Remove the fingers and read aloud, trying to form the words in space about four inches in front of your mouth. Keep a half smile on your face; this will help to hold the lips back. Open your mouth so that the cavity made in the face will be round enough to give the vowels the full sound.

Exercise 10

This last exercise is for self-expression. The final thing to learn to do with the voice is to convey feeling.

Read aloud something you like. Kipling's "If" is good. Julia Ward Howe's poem, "The Battle Hymn of the Republic," is excellent. Choose something that calls out in you the sense of glorying in power, might, and strength.

Then change to something calling forth kindliness, gentleness, sympathy. I usually use John Martin's poem, "The Dark."

THESE exercises make no allowance for timing the voice or for the development of voice timbre. They will simply start you on deep, resonant, full tones, on enunciation sufficiently clear to be easily understood. They are basic of all voice development. Practice each one five minutes a day, fifty minutes for the ten, twice a week for six weeks, and you will develop your voice in a way that will amaze you!

Her hair is oily

She should use Packer's Pine Tar Shampoo

If you have the kind of hair that loses its fluffiness shortly after shampooing, use Packer's Pine Tar Shampoo. This preparation is tonic and mildly *astringent*... approved by dermatologists. It leaves the hair fluffy, with a natural sparkle. Use it every four or five days at first; later every week or ten days may be enough.

Her hair is dry

She should use Packer's Olive Oil Shampoo

Like all Packer soaps, this shampoo is a vegetable oil soap . . . in addition, it contains a rich, soothing emollient (and nothing to dry the scalp). Dry scalps will never feel a stinging sensation when they use this special shampoo. Leaves your hair soft and silky to the touch—more manageable—and delicately perfumed.

He has dandruff

He should use Packer's Tar Soap

the soap that made pine tar famous for shampooing. Pine tar is antiseptic, healing, with properties valuable in the treatment of dandruff. For almost 60 years dermatologists have endorsed Packer's Tar Soap for skin and scalp. For noticeable dandruff use Packer's Tar Soap every few days until improvement begins.

Select the shampoo your hair needs—*mail coupon and 10c for one sample* (25c for set of all 3)

Acute cases of dryness, oiliness and dandruff need a doctor's care. But nearly all scalps *tend* to be dry or oily, and many are mildly affected with dandruff. Now—each type of scalp can have the special shampoo which meets its particular needs. The coupon is for your convenience. The regular size of each shampoo is for sale at your drug or department store.

The Packer Mfg. Co. Inc., Dept. 6-F, 101 West Thirty-First Street, New York, N.Y.

I enclose_____cents. Send sample of

- ☐ Packer's Pine Tar Shampoo 10c
- ☐ Packer's Olive Oil Shampoo 10c
- ☐ Packer's Tar Soap.....10c
- ☐ Set of all 3.....25c

The Sins of the Fathers—

(*Continued from page 65*)

young feller," Ed Gardner said, "what's the big idea? You can play if you want to. Run over and tell that young kaiser to go roll his hoop. He don't seem to know that this is a free country."

But Robbie didn't make any move to turn back till Ed took his hand and walked over with him. I happened to glance at Sue at that moment and I was actually frightened by her face. It looked suddenly tortured. She was following Ed and Robbie with her eyes and had one hand out as though to draw them back.

"What's the idea?" we heard Ed demanding. "Why can't Robbie play?"

AND then Vincent's voice, sulky at having grown-ups interfere, but shrill and sure of himself just the same:

"Robbie Sloane can't play because he hasn't got any father."

"Well, of all the fool ideas I ever heard," Ed said. "You might have lost your own father—you ought to feel sorry for Robbie, not keep him out of your game. Why, I haven't got any father either, any more. You'd let me play, wouldn't you?"

But Vincent Burris held his ground.

"Robbie Sloane can't play. He hasn't got any father."

Robbie Sloane's lower lip began to tremble; he was only a baby in spite of the manly cut of his hair.

"Come on, kid," Ed Gardner said roughly. "We don't want to play. Let's all go down to the Oasis and see if they're giving away ice cream today."

Robbie lit up like a Christmas tree at that, of course, and trotted along beside Ed, forgetting all about Vincent Burris before he'd taken three steps.

But as I walked along beside Robbie, I knew.

It was all suddenly terribly clear. Even that odd little phrase, "I'm Sue Weller's child." The way Sue wouldn't come inside the yard herself when she brought Robbie to our party, her stiff shyness, the way she never went anywhere, the way she had seemed almost to plead with me, a half-hour ago, to believe that Robbie was nice. Even Robbie being cleaner and better dressed than the other children, bringing expensive birthday presents she couldn't afford—Sue fairly tearing her heart out to make a place for Robbie with the other children.

As we all sat down around one of the three-legged tables in the Oasis, Sue dropped her stiff pretense. She just took for granted that we had understood. Robbie, excited over his "banilla sundae," wasn't paying any attention to us.

"I thought I could get away with it," she said simply. "I thought it would be better for Robbie here in Montrose, and mother was willing to give us a home. I thought if I just came back as Mrs. Sloane, widow— It was going all right! Robbie's been playing with nice children—you invited him to the twins' birthday party—I was asked to another one, too, and I was going to give him one—his birthday's today. I thought it was going to be all right at last."

"Wouldn't it have been easier for you in Chicago, where nobody knew you, where you could make new friends?" Ed asked.

"It was easier for *me*," Sue said, "but it wasn't good for Robbie. I didn't earn much—I had to board him out and he never got the right kind of food. I couldn't have him with me when I had to be away all day. I even tried general housework so that I could keep him with me—and that didn't work, either. Robbie didn't have any playmates nor any home—he was just a scared little mouse in other people's kitchens. I had to keep shh-ing him and scolding him for things that were just harmless childishness, for fear it would bother other people. I tried boarding him out again, and there was a woman who—who wasn't good to him." She gave a queer, ghastly little shudder. "And when I went to see him, he didn't tell me. She scared him so he didn't dare—she shut him up in a dark closet for three hours at a time—that baby—"

Sue's voice broke so she couldn't go on. I thought of Robbie's pathetic little "Can I walk anywhere I want to? And touch anything I want to?" The trusting little hand he would slip in mine. Then I thought of my own little Jack—of someone being unkind to him and his being left helpless, not even daring to tell me—Oh, I knew how Sue felt, all right!

"I don't care anything for myself, any more," Sue went on thickly, "if things can just be right for Robbie. And I thought that maybe if I came back home—"

"I haven't heard a word from anybody," I assured her. "I don't know what started off Vincent Burris, but don't you worry. Everybody loves Robbie—"

"I don't know what to do," Sue said, "if we can't stay here in Montrose."

I went on giving her what assurances I could, but I wasn't feeling any too happy and safe about them, myself. I know Montrose and I know how, once scandal gets started, it's like a grass fire on a windy day. In fact, I was feeling so concerned that I left Ed and Sue at the Oasis and walked straight out and called on Vincent Burris's mother.

I DIDN'T know Mrs. Harris Burris very well; she's a little older than I am and has gone in for being so terribly smart and exclusive. I was so excited and worked up, feeling sorry for Sue and Robbie, that I scarcely realized what a cheeky thing I was doing till Mrs. Burris came into their little reception-room. However, I summoned all my nerve and started out on just what I'd planned to say.

And I hadn't said ten words before I knew it was useless. I don't know how, but from somewhere, Mrs. Burris had got hold of Sue's story. At first mention of Robbie's name, she shut her lips in a hard, tight line and her eyes looked like those gray agate marbles we used to play with. It seems that Sue had invited Vincent to Robbie's birthday party, and that had made Mrs. Burris very angry.

"I hadn't intended to mention Miss Weller's unfortunate story," she said," but when she showed the effrontery to expect her child to be taken right in among decent children, I felt it my unpleasant duty—"

"But Robbie is decent, really, Mrs. Burris," I urged. "He's sweet and unselfish and well-behaved, much better behaved than most of our children—"

That was a stupid remark, I saw as soon as I'd made it.

"Sue Weller has made her bed," Mrs. Burris said stiffly. "I'm very sorry for her, but I can't keep her from lying on it."

"But Sue *is* lying on it. She isn't asking anything for herself," I pleaded. "It's just for Robbie. You'd never need to see Sue once if you didn't want to, but Robbie couldn't hurt anybody. He's the friendliest, sweetest—Oh, don't take out any mistake Sue may have made on Robbie. Just suppose it were Vincent in Robbie's place—"

That was wrong too. I seemed unable to say anything but the very worst possible.

"I'M AFRAID it's Sue who should have thought of Robbie, not either you or I, Mrs. Horton," Mrs. Burris said. "You and I may wish it weren't so, but it seems to be true that the sins of the fathers are visited upon their children, even to the third and fourth generation. It's hard on the innocent one, but it is nothing that I have anything to do with, personally, Mrs. Horton. The truth is mighty and will prevail."

"You could keep it from prevailing for a little while at least," I said, "by just hushing up Vincent. And it wouldn't be so bad, even if it got out later, after people had got to know Robbie and love him. You wouldn't have to let Vincent go to the party, but if you could just keep him from saying anything to the other children—"

Mrs. Burris smiled, the most disagreeable, snubbing smile in the world.

"Thank you so much, Mrs. Horton, for allowing me to keep my child home when I think best. But as for 'hushing up' Vincent—that's not as easy as one may think. He's a very frank and open child. As a matter of fact, my dear"—I loathe it when people who hate you call you "my dear"—"I'm a little older than you and perhaps a little more experienced in the world. Let me give you just a wee bit of advice. Don't take too much upon yourself. If a thing is true, you have no right to try to keep it under cover. Nothing is gained in the long run."

Five minutes later, I found myself out on the street realizing I'd done nothing but make a fool of myself. I discovered that I was shaking all over—I was so angry at Mrs. Burris, so afraid for Robbie.

Ed Gardner dropped in that evening with some more of the old diaries, and he told me that just what I knew was going to happen was already beginning. He had walked home with Sue and Robbie, and Sue found two notes there, regrets for Robbie's birthday party. From little Tommy Scoggins and Baby Bartell. It was plain to see what had happened. The Scogginses are related in some way to the Burrises,

Higher Accountancy—

What does it offer you?

What 15 LaSalle-Trained Accountants Reported During a Single Week!

"I have enjoyed every minute of the work. It has been a wonderful education for me, and will mean the making of a great success."
Glen Black (Ontario, Canada)

"I want to thank LaSalle for the excellent knowledge and coaching received throughout the entire course. You have given me one big thing in life, and that is a desire to promote myself in business."
Jack Cohen (Shanghai, China)

"I was successful in passing the Spring examinations in this state."
Charles Pichetti (Missouri)

"I was successful in passing the C.P.A. examination, and have received my certificate."
F. H. Chant (Massachusetts)

"I not only passed the examination but have been notified that I am to receive the silver medal awarded by the Illinois Society of Certified Public Accountants for passing with honors."
Benton W. Powell (Illinois)

"Passed the California C.P.A. examination held last November."
T. H. Mugford (California)

"Your course was a great help to me in preparing for the C.P.A. examination."
Charles Silep (Indiana)

"Not only was I successful in passing the last Manitoba intermediate examination in Accountancy but also had the honor of receiving the W. A. Henderson silver medal, a local award for the best all-around paper turned in on the examination in question."
W. M. MacDonald (Manitoba, Canada)

"I have written nearly 100 applications to prospective employers lately. It may interest you to know that I received about 65 replies, many of them favorable. I have finally accepted a position with a large foundry in Pittsburgh, at an increase in salary and unlimited future possibilities."
Fred W. Hill (Pennsylvania)

"My salary is greater than before taking this course. I am now Auditor."
R. H. Bennett (Ohio)

"After finishing your course in Higher Accountancy my salary increased 100 per cent. I should like to apply for membership in your 100% Club."
Arthur E. Newell (Virginia)

"My husband is now Secretary and Treasurer of Warwick Laundries, Inc. We both wish to thank you for the greater prosperity which has come as a result of his training by your school."
Mrs. Herbert Hulse (New York)

"My present position, as Assistant Comptroller of the Ranier National Park Company, has been made possible largely through the knowledge and ability gained through LaSalle."
D. F. Crammond (Washington)

"I owe my present position, which incidentally gave me a salary increase of over 50 per cent, to my knowledge gained from the course."
Lester G. Page (New York)

"Today my salary has increased 350 per cent as a result of taking your course—thanks to LaSalle and the untiring efforts of its associates."
Marshall R. Burson (Texas)

"Of course those cases are *exceptional!*"

We can almost hear you say it, when we tell you about a clerk who enrolled for LaSalle home-study training in Higher Accountancy and increased his income more than 250 per cent—or about an assistant bookkeeper who within seven years increased his yearly income more than 700 per cent, meantime qualifying for the position of Comptroller.

But again we say, they're *not* exceptional—just to give you an accurate picture of what we mean when we speak, for example, of "thousands of success-reports in the files of LaSalle Extension University," we are summarizing here fifteen reports from *Higher Accountancy members only, received during a recent single week.*

Note the enthusiasm which these men express for LaSalle training. "I have enjoyed every minute of the work," writes Glen Black. "You have given me one big thing in life . . . a desire to promote myself in business," writes Jack Cohen, out in Shanghai, China.

Note that four of them report passing C.P.A. examinations, in as many different states—and two others report successful progress toward that goal.

Note that six report definite promotions, one of them giving credit to LaSalle for a 350 per cent increase in salary!

Send for Salary-Increasing Plan

Do you appreciate what accountancy means in the business world? Do you realize that it is a necessary factor for the success of every business undertaking? Do you know that the expert accountant commands $3,000, $5000, $10,000 a year and has a favored route to general executive positions?

Why let the other fellow walk away with these better jobs, when right in your own home you can equip yourself for a splendid future in this profitable profession?

Under the LaSalle Problem Method you can acquire a thorough understanding of Higher Accountancy, master its fundamental principles, become expert in the practical application of those principles—this without losing an hour from work or a dollar of pay.

Your training will be under the direct supervision of William B. Castenholz, A. M., C. P. A., former comptroller and instructor, University of Illinois, member of American Institute of Accountants, and a director of the National Association of Cost Accountants. He is assisted by a staff of legal, organization and management specialists, business efficiency engineers and Certified Public Accountants.

Preliminary knowledge of bookkeeping is unnecessary. Our free book on accountancy fully explains how we train you from the ground up, according to your individual needs. Low cost; easy terms.

If you are dissatisfied with your present equipment, the coupon just below will bring you an inspiring story—"Ten Years' Promotion in One"—of how one man, through study at home, cleared the path to success; also the true facts about present-day opportunities in Accounting, all without obligation.

The man in earnest to get ahead will find in this coupon a most profitable aid to progress.

Name Present Position Address

and Mrs. Burris had been talking to Tommy's mother. The Scogginses and the Burrises are probably the two most important old families in Montrose. They have dozens of connections, all rich and important. On a thing like that, the entire town would slowly follow whatever they did.

And you couldn't have a better proof of what was going to happen than Betty Bartell's turning down Baby's invitation. Betty is one of those social climbers who can tell which way the wind is blowing before anybody else even feels a breeze. I met her on the street the next day and asked her why Baby wasn't going to Robbie's party. And she didn't even know. I'm sure she hadn't heard anything except that Mrs. Scoggins and Mrs. Burris weren't letting their children go. And that was enough.

It would be enough for everybody else, too, in time. The story would run through the Scogginses and Burrises and all their friends and connections like blood through veins. And in time it would take in all the town. I'd seen that sort of thing happen before. Once it was started, there was no stopping it. The only chance was to stop it at the source. And I'd done my best on that and failed.

I WALKED on down to Sue's after leaving Betty Bartell, to ask if she'd like to have me come and help at the party. She was wrapping presents for the grab bag and she'd bought the cutest things. They were much too expensive, but I didn't tell her so. I knew that she was just trying to make up to Robbie.

"He's so excited," Sue said. "He's never had a party in his life—yours was the first he'd ever gone to. He can hardly go to sleep at night for talking about it."

"Have you had lots of acceptances?" I asked, in what I tried to make a casual tone.

"Why, no, not yet," Sue answered. "Mrs. Haskell telephoned this morning and said she couldn't let her little girls come—one of them had been exposed to grippe and she thought it would be safer to keep them home."

My heart sank down into my lizard-skin pumps. That thin excuse, and from Mrs. Haskell! Mrs. Haskell and Mrs. Scoggins are hand-in-glove together in club work. The poison was spreading.

I walked home feeling sicker with every step. Robbie had called to me from the yard, "I'm going to have a birthday party Friday and all the children are coming!"

Would they all come? I thought of Sue making the grab bag, of Robbie's first birthday cake, of his soft, trusting little hand—suppose nobody came to that party! I suddenly recalled a birthday party in a film I'd seen, a party that a mother had worked over for a little girl—their waiting for guests who never came.

My twins would come to Robbie's, and I thought I could count on Rosie's children. I wasn't sure about Dulcie and Mrs. Frank Kirsted. You can't be sure of anyone in a thing like this. And it wasn't just this birthday, it was all the years ahead. No wonder Sue had that hunted look. To love a little thing as she loved Robbie and not to be able to protect him!

I had to report to the Montrose Then Committee the next day and, with no heart for my work, I opened one of old Mr. Gardner's diaries. I read several

Film Clings to Teeth—

In it are the acids of decay
Film-free teeth are white and healthy

Remove FILM *daily—scientifically*

You must remove film to give teeth gleam and sparkle—to combat serious tooth and gum disorders. The new way urged widely by dentists

OONER or later teeth get that discolored look. Then be careful, that is likely to be the day when ous tooth and gum troubles get r start.

'hat is because dull teeth mean *h covered with a film.* And film, found, is the source of the com- ner dental diseases including rrhea, bleeding gums, decay and ıy others. To remove it scien- ally the special film-removing tifrice called Pepsodent is urged. ou will be sent a free 10-days' ɔly to try. Please mail the cou- before you forget.

Film—What it does

Run your tongue across your teeth and you will feel the dangerous coating—film. It clings to crevices and stays. It absorbs ugly stains from foods and smoking. Germs by the millions breed in it. And germs with tartar are the chief cause of pyorrhea.

How the new way removes film

Brushing fails to remove film successfully. Now science produces a special film-removing agent. First it acts to curdle film so that light brushing easily removes it.

When film is gone teeth begin to whiten. The danger of decay and pyorrhea is scientifically combated.

Remove film by this method for 10 days. A glorious surprise awaits you. Teeth regain sparkling whiteness. Smiles grow far more charming. This is a great step toward a winning personality.

Try this way—Free

Get a full-size tube wherever dentifrices are sold, or send coupon below to nearest address for free 10-day tube to try. Do not delay. It will work wonders with your smile.

THE new French panel heel in Iron Clads No. 922 at $1.50 a pair! Chiffon, silk to the top, No. 922 comes in the latest, loveliest shades of sunbronze, suntan, breezee, mistery, Manon, beach tan, Cuban sand, Reveree, mirage, light gun metal, evenglow, pastel parchment, pearl blush, grain, skin, atmosphere, white and black . . . size 8 to 10. If your dealer can't supply you, send us his name with your remittance and we'll mail your hose direct, postage prepaid.

Refreshing

SILK STOCKINGS should be washed each time they're worn. But soap and water shorten the lives of ordinary stockings.

The loveliness of Iron Clad hosiery may be *refreshed* by washing. Iron Clads are made to *wear* and *wash* and *be admired*. They have all the delicate beauty and pearly lustre of more fragile stockings. Yet soap and water can't destroy their lasting loveliness.

Iron Clads . . . sheerly, but firmly, woven for days and days of hard wear and constant washing . . . are filmy enough to perfectly match the daintiness of summer frocks. Yet you can wear them and wash them repeatedly. An Iron Clad *guarantee* of satisfactory service or a new pair of stockings proves it.

COOPER, WELLS & COMPANY
204 Vine Street, St. Joseph, Michigan

pages, my mind on Sue and Robbie. Then suddenly I saw what I was reading! I read the same paragraph over and over. I could scarcely believe my eyes.

I was so excited I called Will's office before I remembered that he'd already left for Dawson and wasn't going to get home till the next evening. I left word that if Mr. Gardner came in that afternoon, they would please ask him to come to Mrs. Horton's right away and bring all the rest of the diaries. There was no time to lose!

Ed arrived about four o'clock with a puzzled look and a pile of dusty books.

"I think," I told him—and I heard my own voice shaking—"that I've found a way to save Robbie!"

It was five o'clock when I rang Mrs. Burris's doorbell again and was ushered into her little reception-room. At my first look at Mrs. Burris's gray agate eyes and straight-line mouth, I knew that I was scared. She looked to me, all at once, like an alligator. But I could almost feel Robbie's trusting little hand in mine. I couldn't fail him.

I swallowed over a stiff lump in my throat and smiled brightly.

"I'VE come on a less unpleasant errand today, Mrs. Burris," I said. "I'm representing the Montrose Then Committee and we were wondering if you still have any of the Burris keepsakes in your attic. The Burris family is such an important part of Montrose history that we can't do much without your help."

Mrs. Burris's hard look faded at that.

"Why, let me see—" she was all amiability. "There are a lot of old family relics in the attic. I'm sure we still have the desk Father Burris had when he was first made cashier of the bank. Then there's the robe Great-uncle Benjamin wore as judge—we happen to have that."

"Well, we—" I began, but Mrs. Burris interrupted me.

"Or are you using Great-uncle Isaiah? The one who was in the state legislature."

"We," I began again and finally managed to hold the floor and choke off the flow of judges, bankers, and legislators, "we're trying to get a few homely, picturesque scenes, for contrast, you know."

"Oh, in that case—" Mrs. Burris began, in a voice to suggest that I'd come to the wrong place.

"We're going to use a scene or two in the old hotel. They were always pulling off horseplay jokes there, and we've found two or three of them in old Mr. Gardner's diaries. And it always seems to have been Mr. Sam Burris who was the ringleader. So we—"

"Mr. Sam Burris?" Mrs. Burris raised her plucked eyebrows. "I don't—"

"Oh, he was the father of the Judge and the Senator. Quite a town character, I imagine. He tended bar in the old hotel. A bit of a black sheep, but an awfully picturesque one."

"I don't think—"

"Quite a time his sons had, living him down. Of course, he got pretty low in later life, but we'd get scenes from the heyday of his career, the part that all the older people will remember."

"Oh, I don't think—"

"And isn't it the luckiest thing," I went on brightly, "we've been down to the old hotel, and up in the attic, under piles of junk, we found the original bar. And there's one of the Perkins boys, the fattest one, who looks enough like the description of old Sam to play the part. We'd use a caption, of course—'Sam Burris sets 'em up' or something like that. All we'll need for costume will be a dirty white apron. Isn't that luck!"

Mrs. Burris was looking at me as though she'd just bitten a filling out of a tooth.

I went on gayly describing the pranks we were going to use.

"It's so much cleverer, don't you think, to get things out of the rut like that? It's that sort of thing that really makes the atmosphere of a pioneer town. Any city can produce its judges and bankers—we want the intimate, colorful things for the record. Like old Peter Scoggins, you know, the one who was an Indian agent. Of course, as everybody will remember, old Peter really started the Scoggins fortune by cheating the Indians, but we won't use that part.

"And Andy Haskell," I continued brightly, "who was ridden out of town on a rail for stealing horses. I believe he finally wound up in the penitentiary at Joliet. Anyway, he never came back. I think it's perfectly wonderful the way the wife and little boy he left behind managed to live it down. Why, just think, that little boy is Mr. Dewey Haskell!"

The Haskells are related in some way to the Burrises. Mrs. Burris had turned the color of split-pea soup.

"I think it's the most outrageous thing I ever heard of," she said, "to dig up all that old, forgotten scandal and set tongues wagging—"

"Oh, that isn't nearly all," I assured her. "The diaries are just full of the most wonderful anecdotes. Of course, there's something picturesque about almost every family in town, but I think it would be better just to pick the best-known families to use."

"It's—" her face was simply scarlet.

"And it's all true; that's the perfect part. Isn't it wonderful the way, years after things seem to have been forgotten, they crop out again? It's just as you said yesterday, Mrs. Burris. The truth is mighty and will prevail."

"IT'S outrageous—you can't do this terrible thing! Why, think of all the families who have position in town—what this would do to them."

I sighed.

"I'm afraid it's old Sam Burris and Peter Scoggins and Andy Haskell and the rest who should have thought of them. I'm very sorry for the families, but it's not my doing that the sins of the fathers are visited upon their children, unto the third and fourth generation. Those things are always a little hard on the innocent person but, as you said, if a thing is true, there's no use in keeping it under cover."

"You can't do this! It's a wicked thing." Mrs. Burris looked at me wildly. "You can't make people of wealth and position the laughingstock of the town!"

"Why can't I?" I asked calmly. "I've already told the Committee that I have some wonderful ideas. Even if I should tell them now that we couldn't use the ideas and why—well, I could scarcely keep the Committee from talking. They're like Vincent, very frank and open."

"You mean," Mrs. Burris leaned forward breathlessly, "you mean that the

More than a quarter of a million users

and they haven't spent a single dollar for service

wo years ago this month e General Electric Re- gerator was first pub- ly announced. And how it was ceived! Everywhere you heard said that General Electric had mpletely revolutionized the art refrigeration. They had indeed.

fteen years of research and de- lopment had produced a refriger- or with an hermetically sealed, st-proof mechanism, mounted on . . . a refrigerator with an im- oved type of cabinet, mounted on s . . . one with an accessible tem- rature control . . . that established new standard of quiet operation . that required no oiling . . . that pensed with all troublesome ma- inery . . . that banished installa- n problems . . . that eliminated radio interference . . . that low- d operating costs.

This small-family model sells for $215 at the factory $215

Today more than a quarter of a million homes are enjoying the exclusive innovations which only the General Electric Refrigerator offers. And not one of these owners has ever paid a dollar for service . . . that was our guarantee to them!

There has been no fundamental change in the original design of the General Electric Refrigerator. A radical improvement, however, has been made in the cabinet! It is now all-steel! It cannot warp. It is as strong as a safe. This remarkable cabinet and the hermetically sealed mechanism combine to make what we believe to be the most perfect refrigerator ever built. For descriptive booklet address Section A-6, Electric Refrigeration Dept. of General Electric Company, Hanna Bldg., Cleveland, Ohio.

Most of the foods we eat are lacking in this precious health element

A rich supply of precious Vitamin C has been found by scientists in familiar Japan green tea

Scientists have found a simple cause of several common maladies —and a safeguard

Thousands may be missing the joys of perfect health for lack of this one thing. Scientists have recently found a simple cause of several common ailments—and a simple safeguard.

One precious element is entirely absent from most foods we eat. And it is this very element which has now been discovered in familiar Japan green tea.

"Important to us," writes one eminent authority, "are the results of a diet *poor* in Vitamin C. The symptoms are a *sallow, muddy complexion, loss of energy, fleeting pains in the joints and limbs usually mistaken for rheumatism.* It now appears that this condition is rather common among grown people."

Every day ailments

Loss of energy, nervousness, poor appetite, sleeplessness, come frequently to those whose vitality is low—who are "run down," and easily tired out.

There are many whose mirror shows a sallow, muddy skin. Many who are troubled with pains that seem like rheumatism.

There is no sovereign remedy. But today there is a simple safeguard. In fragrant, pleasant Japan green tea there is a protection against these ailments.

Only a few of our foods, aside from Japan green tea—a small group of fruits and vegetables—contain Vitamin C. The familiar Japan green tea we buy at grocery stores is rich in it.

Try this easy plan

If you are easily tired—feel "run down"; if your skin is sallow or muddy; if you suffer from so-called rheumatic pains: Drink tempting, flavor-laden Japan green tea three times a day. Profit by its rich supply of Vitamin C. In two or three weeks you will probably feel more healthy—more alive, more vigorous. But be sure you drink Japan green tea.

Japan green tea has been for years one of our two most popular kinds of tea. It comes in several grades—in packages under brands or in bulk. Your grocer has Japan green tea or can get it.

FREE VALUABLE LEAFLET *giving full facts on health value of Japan green tea with a colored souvenir booklet on tea mailed direct to you from Japan. Mail coupon to American-Japanese Tea Committee, 749 Wrigley Building, Chicago.*

rest of the Committee haven't seen these wretched diaries—that they wouldn't know anything about these things if you didn't tell them?"

I shrugged my shoulders.

"They haven't seen them yet," I admitted. "But as a member of the Committee, I should feel it my unpleasant duty—"

I rose and gathered my gloves and hand bag.

Mrs. Burris called me back. She looked straight at me.

"What do you want," she asked, "to keep your mouth shut?"

I was simply dumfounded. I had no idea one lady ever spoke so outright to another. But I looked right back at Mrs. Burris, straight into her gray agate eyes.

"You know very well what I want," I said.

But at the door I paused.

"By the way," I said, "we'll probably be working on the film, off and on, for a year. We want to get some winter scenes. I don't know how much control you have over Vincent or how much influence you have with the Haskells and the Scogginses but—" I shrugged my shoulders.

"Well, I'm so glad I found you home," I said brightly. "It's been such a pleasant little call. Remember me to Mr. Burris. I suppose I'll be seeing dear little Vincent at Robbie Sloane's birthday party. Don't forget—it's this week, Friday. Good-bye!"

IT HAD been a happy birthday for Robbie. I stayed to help Sue pick up a little afterward. Robbie was sitting on the step working with the box of clay little Tommy Scoggins had brought. All the children had brought presents, of course. "Happy Birthday to Robbie from Vincent Burris." "Happy Birthday to Robbie from Baby Bartell." Trust Baby Bartell's mother to know that the wind had changed! She called up Sue Friday morning and said she found she could bring Baby, after all.

The way Robbie was sitting, you could see only his close-cropped dark head and a thin little shoulder, the soft curve of one baby cheek.

I knew Sue was watching Robbie, and I swallowed over a great lump in my throat. To love anybody that way and to be always afraid for him! *I* was afraid for Robbie, too. I'd fixed it for him for a year but after that—

"Poor little kid!" Ed Gardner, who had stopped in after the party to have a piece of birthday cake, spoke sympathetically. I glanced from Robbie up to Ed and my mouth fairly fell apart. Ed was speaking about Sue Weller, not about Robbie. He was standing with his arm across Sue's shoulders, his hand rumpling her soft hair.

"Let's tell Dot," Ed suggested. "Let her be the first to wish us luck. I'm taking Sue home with me when I go back to Vancouver next week."

"Oh, Ed! Oh, Sue!" It was such a perfect answer to everything, that was all I could think of to say. And after a moment, "And you're taking Robbie?"

"Well, naturally!"

I needn't have asked. I looked at Ed's broad shoulders, his strong hands, his kind eyes. And I knew that whatever happened now, Robbie'd have a father to look after him. And Vancouver—thank goodness—is a long way off.

Progress has proved that FRANKLIN was right

Franklin acknowledges with pride the way in which the Youth of America has taken to the new *airplane feel* of Franklin air-cooled cars. American boys and girls really test cars, and to win their enthusiasm is to gain the approval of the entire nation. Youth has tried every car—and has now turned to air-cooling because of its remarkable performance—*because it is progressive.* Just as Aviation has turned to air-cooling because of its great reliability, stamina and power.

From the thrilling airplane feel of driving the new Franklin, to its modern, modish beauty, this sensational motor car is *NEW*. So new that even a short drive is an experience which says, "No automobile has ever performed so amazingly, handled so effortlessly, ridden so comfortably"—none can without air-cooling!

And with the new prices, which are as much as $600 lower than previous Franklins of similar type, the performance, quality and value offered are even more sensational. Incomparable! And thousands realize it. Sales are more than 200% of the same period last year. Drive the car today—experience the famous *airplane feel.*

The Kind of Poise That Gives You Power

(*Continued from page 13*)

detract from it. The four *positive* factors are, of course, the ones we should seek to acquire. They are as follows:

1. Confidence
2. A just appraisal of oneself
3. A sense of mastery
4. Magnanimity

"The four negative factors, those which detract from poise, the opposites respectively of the postive ones just named, we should seek to get rid of. They are as follows:

1. Fear
2. Exaggerated ego
3. Lack of training
4. Antagonistic emotions

"I have already said that the man of poise is distinguished by the harmony which exists between the various elements of his personality. It is this which accounts for his ability to conduct himself in a frictionless manner under trying circumstances. On the other hand, we frequently find that the person lacking in poise is disturbed by inner conflicts, doubts, and fears which make his conduct variable and uncertain under conditions of stress, and not infrequently under circumstances that are the most ordinary. This brings us back to the case of Miss F—. As you will see, the difficulty in which she found herself had to do with the first pair of contrasting elements named above—*confidence* and *fear.*

"FROM Miss F— I learned that some three years previously she had separated from her husband. A divorce had followed and she had resumed her maiden name. Subsequently, for this failure of her married life she had come to blame herself alone, attributing it solely to shortcomings in herself.

"The state of mind in which I found her is typical of persons whose lack of poise is due to fear. She felt that the faults which had manifested themselves in her married life would inevitably show themselves in her business activities and likewise lead to failure in this field.

"With the facts in hand, it was not difficult to show Miss F— that she was not alone to blame for the conditions that had led to the divorce. As is so often the case in such matters, there were unquestionably faults on both sides. But what I tried in particular to make her realize was that she had numerous latent qualities which, if developed, would make for her success in business as they might have made for her success in marriage. For instance, she was naturally kind and sympathetic. She was eager and willing to be helpful. She *liked* working with people. She had a strong sense of orderliness and considerable executive ability.

"In time Miss F— was able to make her business contacts with confidence and success. The change, of course, was a gradual one. It came about largely *because of her changed attitude toward herself.* To begin with, instead of magnifying her deficiencies, she let her mind dwell upon the qualities she had that were of value in her work. And she made a particular effort to do this because she had come to understand the effect that self-depreciation had on her conduct. Previously, she had been letting her mind dwell on the conviction that she was not naturally pleasing to other people and could not expect them to like her. This naturally had resulted in a feeling of shyness when it came to meeting people. To conceal her weakness in this respect she had over-asserted herself. In consequence, her voice had taken on a nervous, shrill quality, and her manner had become more or less dictatorial.

"DO NOT understand me to say that it is always easy to rid ourselves of the complicated doubts, conflicts, or fears which affect many of us in the same way they did Miss F—. What I want to emphasize is this: *Understanding* the effect which such inner conflicts have on our behavior is often the starting point from which we can go on to acquire the confidence we lack. For the effect of such conflicts—whether they come about through a fear of one's superior in business or through a fear that one's lack of education or of social training will be discovered—is always the same; they produce in us a sense of inadequacy—a discord which is the opposite of that harmony we find in the person with poise.

"It should be remembered, of course, that physical conditions are often responsible for the extent to which these so-called inner conflicts take hold of us. I refer to such conditions as over-fatigue, gastro-intestinal troubles, uneliminated bodily poisons due to under-exercise. When we find in ourselves persistent ills of this sort, it is important that we should set them right by following the advice of a competent physician.

"For those of us who are given to self-depreciation, it would be a good thing if we repeated the daily prayer of the poor Scotch weaver—'O, Lord, grant that I may have a good opinion of myself!' And why not? Can we expect others to have confidence in us if we do not have it in ourselves?

"'*Self-distrust is the cause of most of our failures. In the assurance of strength, there is strength; and they are the weakest, however strong, who have no faith in themselves or their powers.*'

"And here I am reminded of a case that Doctor Abraham Myerson reports, of a man whose life, from his early thirties on, was an instance of lack of poise to an extreme and distressing degree. Since the factor that was strongest in his personality is the one farthest removed from that which caused the trouble in Miss F—'s case, suppose I refer to him as Z—. You will see that all I have to say in connection with him has to do with the second of the four negative factors named above—*exaggerated ego*—and the positive factor which is its opposite—*a just appraisal of oneself.*

"Following his graduation from medical college Z— began practice under favorable circumstances in one of our prosperous mid-western cities. Industrious, possessing considerable skill, he rose

Our *second car* has made us pals"

"WHEN I was a child it was easy for mothers to keep in touch with their children," says a woman in Illinois. "Today the members of the family must make a real effort to keep united.

"I thought a great deal about this as my children began to grow up. I decided that the most important thing I could possibly do would be to plan ways in which they and I could have our good times together.

"My husband agreed, and for that reason we bought a second automobile, since he had to use his car in getting back and forth to business.

"I can't begin to tell you of the happiness it has given us—picnics together, expeditions for wild flowers in the spring, and exploration parties to spots of historic interest. It's our very best investment. It has helped the children and me to keep on being pals."

Every year thousands of families decide that a second car is a saver of time, and a great contribution to family happiness and health.

If your family makes that decision, General Motors dealers can help you select a second car that will meet your requirements exactly. The General Motors line affords combination of cars that any family can want; and for those desiring transportation at still lower cost, General Motors dealers also sell used cars, as well as new cars, on the GMAC Payment Plan.

Keeps Hair Neat

Rich-looking — Orderly

IF your hair lacks natural gloss and lustre, or is difficult to keep in place it is very easy to give it that rich, glossy, refined and . . . orderly appearance . . . so essential to well-groomed men.

Just rub a little Glostora through your hair . . . once or twice . . . a week—or after shampooing, and your hair will then stay, each day . . . just as you comb it.

Glostora softens the hair and makes it pliable. Then—even stubborn hair—will stay in place of its own accord.

It gives your hair that natural, rich, well-groomed effect, instead of leaving it stiff and artificial looking as pastes and creams do.

Glostora also keeps the scalp soft, and the hair healthy by restoring the natural oils from which the hair derives its health, life, gloss and lustre.

Try it!—See how easy it is to keep your hair combed—any style you like . . . whether brushed lightly or combed down flat. If you want your hair to lie down particularly smooth and tight, after applying Glostora, simply moisten your hair with water before brushing it.

A large bottle of Glostora costs but a trifle at any drug store.

Try It FREE

idly to a leading position as a surgeon.

"Presently, however, it seemed that success had gone to Z—'s head. What I have mentioned as the dominating factor in his personality—his exaggerated ego—came to the surface. He developed overbearing mannerisms that offended some of his patients, and he made extravagant assertions regarding his own abilities. At about this same time, moreover, at one of the meetings of the local medical society, of which he was a member, Z—, in the course of a discussion of certain professional matters, characterized some of the older members as ignoramuses and charlatans. As a result, he was sued for libel.

"Now, instead of admitting himself in the wrong and apologizing, Z— proceeded to contest the suit. When he lost it, he not only appealed from the decision, but openly declared that the courts and the lawyers were conspiring against him. Refusing to pay his attorneys' fee, he was sued by them. When one of them dropped the casual remark that Z— was 'crazy,' Z— took this up and brought suit against him. Thus the original libel suit spread into half a dozen cases.

"Meanwhile, having married a rich wife, Z— found himself in a position enabling him to proceed in a course of conduct that was costly, unpoised, illogical, and ultimately full of disastrous consequences. He studied law and was admitted to the bar. Unmindful of the old dictum, that the man who is his own lawyer has a fool for a client, he now went into court in his own behalf.

"Losing his cases one after another, Z— began an active and open campaign against the courts, denouncing their corruptions in articles and speeches and asserting that lawyers, judges, medical societies, and certain religious organizations were banded into a conspiracy to 'do him up.' In the end he suffered what the layman commonly refers to as 'a complete breakdown,' and was obliged to give up his activities in every direction.

"No one who reads this article, I dare say, will find among his acquaintances anyone afflicted with exaggerated ego to the same extent that Z— was. However, many of us do suffer from it in moderate form; and in consequence, at times, our conduct inevitably lacks in poise."

"HOW can one tell," I asked, "whether or not one's conduct is marked by symptoms of exaggerated ego?"

In reply, Doctor Overstreet listed seven questions which have to do with a kind of behavior that is characteristic of the man with this affliction.

"If you examine the questions carefully," he said, "you will see how they reflect the conduct I have just described on the part of Z—.

1. Do you frequently accuse other people of "doing you dirt"?
2. If you don't accuse them of it outright, do you frequently *think* it?
3. Are you suspicious of the attitude other people have toward you? In particular, do you think that people are likely to underrate your abilities?
4. If you have not been getting ahead in business as fast as you think you should, do you attribute this to the fact that favoritism has been shown your rivals?
5. Do you criticize other people severely?
6. Are you yourself easily hurt by criticism?
7. When criticized, do you bristle up and defend yourself?

"Anyone who finds that he can truthfully answer 'No' to all the above questions can be pretty sure that his sense of his own importance is not over-developed. With reference to any man who can not give a favorable answer to these questions, we may justly infer that his exalted opinion of himself is, from time to time, causing trouble between himself and his friends or business associates.

"ONE of the fundamental problems of life is to adjust ourselves to getting along with people. No one can really manage this unless he has a reasonably just appraisal of himself and his abilities in comparison with his associates. Nothing will help the man who has an exaggerated idea of his own importance so much as practice in *the art of coöperation*. So important to us all, and in particular to the man who suffers from exaggerated ego, is this ability to coöperate, that I give here another list of seven questions:

1. Am I well liked by my associates?
2. Do people come to me for judgment on affairs concerning which I am competent to give an opinion?
3. Do they ask me to give them other kinds of help?
4. Do I give help graciously?
5. Am I irritated by my fellow workers?
6. Are they irritated by me?
7. Am I unhappy when they are present?

"Anyone who can give truthfully a favorable answer to all these questions—'Yes' to the first four and 'No' to the last three—can be pretty sure that his ability to coöperate is excellent. If one can not give favorable answers to all, it is practically certain that he is lacking in this ability to a greater or less degree. In that case these are among the things that he should do:

"He should make a deliberate effort to see things from the point of view of those with whom he has to deal. Let him, once and for all, cease to think of himself as a 'star player.' In all his work he should regard himself as a member of a fine team for whose success he is willing to play any part required. It will help this man in his relations with people, if he will stop thinking of his own achievements and consider what it is that he can accomplish, when working *with his associates*, that he can *not* accomplish when working alone. Likewise, that he may be just to himself, he may ask what it is that his associates can accomplish when he is working with them that they cannot accomplish without him.

"Once a man who is given to exaggerating his own importance can come by a more just appraisal of himself, once he has acquired some facility in the art of coöperation, he will inevitably find that he is contributing much to the happiness of others. He will then not only be on his way to poise, he will have discovered one of the most genuine and lasting pleasures of life.

"Now we come to the third pair of contrasting elements. In this case, the negative factor is *lack of training*, while its opposite, the positive factor, is *a sense of mastery*. Let me see if I can make clear just what I have in mind in this connection.

"Among my acquaintances there is a

There's the germ of a story in this picture. What can you do with it? What couldn't you do with it if you were a newspaper trained writer?

What makes a salable story?

One good idea (how many fine ideas have died in your mind this year?) or one interesting experience, plus the ability and NERVE to write it.

Nerve is capitalized, because lack of nerve—lack of confidence—is the steel chain that fetters many a natural-born writer to some dull, uncongenial task. "Maybe I haven't got it in me" brings many a potential best-seller to a premature close. Ability without enterprise seldom finds its target.

Have you ever noticed that every year scores of young men graduate from the newspaper profession into the ranks of successful writers? Why? Most newspaper men know that writing "salable stuff" is no dark and mysterious secret. Day after day, they write—and write. The very nature of their calling crowds their minds with ideas. Their copy is painstakingly corrected and criticized—by experts. Occasionally, friendly (or threatening) advice is thrown in. And gradually, fewer and fewer corrections are necessary. Astonishing how quickly an intelligent man can *learn to write by writing.*

An inspiring reproduction of a big-city newspaper office

The Newspaper Institute of America has perfected a course of training based on the New York Copy-Desk Method. The essence of this method is to start and keep you writing in your own home on your own time. Your work is watched, edited and guided just as if you were working for a big metropolitan daily. Experienced New York newspaper men are in direct charge of your instruction. Working on definite assignments . . . talking things over (by mail) with old-timers . . . trying, failing—then succeeding . . . writing, writing, writing . . . a man soon finds himself and his confidence through the N. I. A.

Our interesting Writing Aptitude Test will reveal your ability, gauge your possibilities—measure you exactly for the training you need. Send in the coupon and get it. Fill it out and return it to us. Our editors will analyze it for you and tell you exactly what it shows. It's free; there's no obligation. Send the coupon now. Newspaper Institute of America, 1776 Broadway, New York.

man who was graduated from high school and then went into business. He married a remarkably intelligent and well-educated woman, a graduate of one of our large eastern universities. Now, to this man who did not go to college, the benefits and training derived from the higher formal education have always seemed of vast significance. Unfamiliar with what college training really amounts to, the experience he missed has always had a certain glamour for him. He still feels that he can never make up for the lack of it.

"I happen to know that this man's wife has been far too sensible ever to suggest to him that his lack of higher education is evident in his conduct or conversation. Nevertheless, when there is company in their home, the husband feels 'out of it.' He is embarrassed and uneasy. Trying to talk with his wife's educated friends, he feels that he is making foolish remarks, and, though his remarks may, in fact, be as sensible as those offered by the others, he finds himself covered with confusion. His embarrassment and suffering are intensified because he feels that his wife is noticing and is ashamed for him. In this, his lack of poise is evident.

"What should this man do to make up for what he recognizes as a great shortcoming in his education? In the first place, he should cease trying to match information with his wife's educated friends. He should never try to give the impression that he has the same familiarity with certain subjects which they acquired in college. Rather, he should plan ahead for the next four or five years and use all the time he can spare in mastering *some one subject.*

"I SHOULD like to emphasize the fact that the thing for this man to do is *not* to try to get a superficial smattering of a great variety of subjects. *That* could only increase his sense of inadequacy. Mastering *one* subject will do more to annihilate his fear of the things he doesn't know than will a superficial familiarity with a hundred subjects.

"Mastery! Not in the sense of domination over one's fellows, but in the sense of triumph that comes from thorough knowledge of some subject, a trade, a profession, a hobby, a job—that is one of the most essential things in human life.

"All great men have had this sense of mastery. It is something we achieve, and should strive for, as we go along. And in proportion as we are acquiring it, we are justified in a feeling of self-approbation. And self-approbation is essential to that harmony which is poise.

"Can you imagine that a man like Thomas A. Edison or Henry Ford could be embarrassed because of his ignorance of problems or subjects outside his own field of endeavor? No! Why? Because each in his own field *is a master.* And having acquired mastery in one field, he knows exactly what steps to take to acquire any knowledge that he finds he needs with reference to some other field. Moreover, if a man is a complete master in any one field, his friends and associates are prone to look upon him with respect and to discount his ignorance in other directions.

"So I say to any man who has a sense of inadequacy due to lack of training, *go and get a mastery.* And I don't care particularly in what direction, to begin with, he puts forth his efforts. Let him become a master in making radio sets, if that is what appeals to him; or let him master the mechanics, the handling and the repair, of his automobile. Let him take up European history or biography if that is what appeals to him. He will find that, as he really masters any of these things, his attention is turned *from* himself, he becomes absorbed in what he is doing, and he is on his way to poise."

"I THINK, Doctor," I said, "I know a story which illustrates that point. It is about Stephen Girard, back in the post-Colonial days.

"Girard was a shrewd, close man, forbidding in personal appearance, but generous and open-handed in benefactions, self-sacrificing and public-spirited. This famous banker-merchant had a clerk, Ben Lippincott, of whom he was very fond. 'I intend to do well by Ben Lippincott,' Girard would say frequently, and he was not averse even to letting Ben hear this. Consequently, when Ben had reached his majority and had completed his apprenticeship to the banker, he expected to hear from his employer something of great importance to himself. But it happened that Girard seemed disposed to discuss everything but the future of his clerk. So Ben mustered his courage one day and said:

"'I suppose I am free now, sir. I thought I would ask you something as to my course. What do you think I had better do?'

"'Yes, Ben, you are free,' said Girard. '*My* advice is that you go and learn the coopers' trade.'

"To Ben's glowing hopes this chilly answer was like ice. Nevertheless, he said: 'If you are in earnest, I will do so.'

"'I am in earnest,' was the banker's only reply.

"Finally, having faithfully served his apprenticeship to the best cooper thereabouts, Ben reported to his former employer that he was now ready to start in business.

"'Good!' exclaimed Girard. 'Make me three of the very best barrels you know how!'

"And Ben did so. Upon delivery of the barrels, Girard inspected them with care. Finally, pronouncing them first-rate, he asked: 'What are these barrels going to cost me, Ben?'

"'If I am to make a living as a cooper,' answered Ben,' I cannot produce such barrels as this for less than a dollar apiece.'

"'That's cheap enough for barrels as good as these,' answered Girard. 'Make out your bill.'

"And in settlement of that bill, Girard tendered Ben a check for twenty thousand dollars, along with this advice: 'Take it, Ben! Invest it in the best way you know how. If you are unfortunate and lose it, you will have a trade to fall back upon. Whatever happens to you now, you will have the self-respect, confidence, and readiness of a man who has mastered at least one thing thoroughly and well.'"

"That's a story I'll have to remember," replied the doctor. "It hits off the point exactly.

"Let me comment now on the fourth and last pair of contrasting elements which have to do with poise. *Antagonistic emotions* is the term I have used to designate

Phenomenal SUCCESS, RECORD SALES !

"FINGER-TIP CONTROL"

One button, in center of steering wheel, controls starter, lights and horn. Simple design; easy operation. No wires in steering post. You can keep your foot on brake when starting or re-starting on hill.

SAFETY AND CONVENIENCE OF "FINGER-TIP CONTROL" PLUS GREATER BEAUTY AND LARGER BODIES, WIN TREMENDOUS PUBLIC ACCEPTANCE FOR ALL WHIPPET FOUR AND SIX CYLINDER MODELS

All Willys-Overland sales records are broken as the new Superior Whippet's ever-growing tide of popularity sweeps the country. Thousands of new owners are responding to the appeal of the unprecedented value offered by this finest and most modern of light cars.

The longer bodies, smarter lines, higher radiator and hood, more distinctive colors and one-piece full-crown fenders of the new Superior Whippet make it the style authority in its class.

In sustained speed, dashing pick-up and brute power, the Superior Whippet is so far ahead that it surpasses even its own predecessor. A new higher compression engine gives more than 20% added horsepower. And Whippet's dependable performance and low operating costs result in complete owner satisfaction.

The Detroit & Cleveland Navigation Company, operating lines between Detroit, Cleveland, Buffalo and Chicago, will be pleased to assist you in planning a vacation in the Great Lakes country.

Booklets containing pictures and descriptions of many delightful summer resorts including Niagara Falls, Mackinac Island, St. Ignace, Les Cheneaux Islands and Coryell Islands will be mailed you, without cost, upon request.

Flying Boat Service. The Stout-D. & C. Air Lines, Inc., will operate flying boats on regular schedule between Detroit, Cleveland and Buffalo during the summer.

FOUR-DAY ALL-EXPENSE CRUISE, Detroit, Mich. to Chicago, Ill., and return, via Mackinac Island and St. Ignace. Hostess, dancing, bridge, teas, deck games; three hours at Mackinac Island. Round trip fares including meals and berth, between Detroit and Chicago, $60; Mackinac Island and St. Ignace and Chicago or Detroit, $30; Buffalo and Chicago, $79; Cleveland and Chicago, $71.50.

DETROIT AND CLEVELAND, overnight service, daily. Fare, $3.00 One Way; $5.50 R.T. DAYLIGHT STEAMERS, daily, except Sundays, June 25 to Sept. 3. Fare $2.50 One Way.

DETROIT AND BUFFALO, overnight service, daily. Fare, $5.00 One Way. Concerts by Finzel's orchestra, dancing, radio programs. Visit Niagara Falls and witness the wonderful illumination.

Autos carried on all steamers; wireless; meals and berth extra; no surcharge; unlimited stopovers. Fast Freight Service on all Divisions.

For information and reservations, address **E. H. McCracken, G. P. A.,** 3 Wayne St., Detroit, Mich.

DETROIT & CLEVELAND NAVIGATION CO.

the negative quality, and *magnanimity*, the positive.

"I have in mind a man whose conduct in his home life, as well as in business, is marked by a kind of instinctive opposition, a characteristic that is very common with persons lacking in poise. Frequently this trait shows itself in a curious way.

"'Isn't it a glorious day?' this man's wife may say to him.

"'Oh, I don't know!' he answers. 'About the same as yesterday, isn't it?'

"Or perhaps his wife says, 'I've heard such wonderful things about this new play. Wouldn't you like to go to see it tonight?'

"'I guess not,' he answers, without even giving a thought as to whether he would enjoy the play. 'I don't feel like going out tonight.'

"Bear in mind that what I refer to here is purely a matter of mood and does not have to do with a difference of opinion based on reason or a well-considered point of view. Responses of the sort I have indicated most frequently arise from moods of sheer perversity; a sort of hostile instinct to assert oneself. They are unpoised, of course. Inevitably they make for irritation and sourness.

"Of course, I do not mean to suggest that we should always agree with statements that are open to argument. I do mean, however, that, as a mere matter of habit, we should not assert the opposite when we hear an expression of joyousness or an opinion from someone else. When there are sufficient reasons for so doing, we should advance our own opinions or arguments quietly, never letting our emotions get the better of us. Such is the meaning of poise in this connection.

"Can you listen calmly to a point of view expressed by others, even when that point of view is unfavorable to your own interests? Can you hear with pleasure praise given to others who are engaged in the same sort of work as yourself? Can you rejoice in well-earned success in a field in which you yourself would like to win recognition but perhaps have not done so? A man of poise can do this, for he has that rare and noble quality—*magnanimity*—whose meaning I can best indicate by an illustration furnished by my friend, Doctor Daniel Gregory Mason, in his little book on 'Artistic Ideals.'

"AMONG the nineteenth-century composers was one who is now ranked as nearest to the great Bach—César Franck. All his life he was a poor, hard-working, obscure music teacher and organist. He was patronized, even ridiculed, by the reigning favorites in the fashionable music world. Conductors neglected him or played him perfunctorily, without sincerity. If I am not mistaken, even his 'Beatitudes' were never executed in their entirety during his life. Once, when he had arranged a performance at his own house, only a handful of friends and pupils attended. A genius, he was oblivious of all this and went on teaching for a living, for he never was able to support himself by his art.

"When he was sixty-seven, the one symphony César Franck had written was performed at a Conservatory concert in Paris. It was inadequately rehearsed and poorly played. Gounod, so-called dictator of music in the world of fashion, later declared it to be 'the affirmation of incompetence pushed to the point of dogma.' But Franck liked it. As always, on the rare occasions when his compositions were given in public, he bowed low to the audience. That day he walked home with elastic step. At his door his wife met him with eager questions: 'How did it go? Was it a success? Did they like it?'

"'It sounded just right,' answered Franck, with a happy smile. 'Just as I expected it would.'

"About a year after this performance, Franck died. Four days before his death, a friend, Arthur Coquard, brought him news of the success of an opera, 'Samson and Dalila,' by Franck's friend, Saint-Saëns, who had always been much more popular than Franck himself.

"'I see him yet,' records Coquard, 'turning towards me his poor, suffering face to say vivaciously and even joyfully, in the vibrant tones that his friends knew, "*Tres beau! tres beau!*"' (Fine! That's fine!)

"TWO things remain of which I must briefly speak. A few moments ago I made a remark to the effect that the man of poise is the man with an absorbing purpose.

"The point I wish to make here is this: It is by no means necessary to go far afield from the daily routine of our lives to find the purpose that inspires. Indeed, the true secret with regard to a purpose in life is most often to be found *in our own attitude toward what we are doing.*

"There are men I know who have found their fullest satisfaction in transforming into a reality their vision of what a beautiful thing family life can be; and still others who have found an uplifting purpose in the coöperative effort between themselves and their associates in business, in professional life, or in science.

"One word more. No man is strong enough by himself alone to achieve that harmonious nobility of character that is poise. All too frequently we find ourselves surrounded by narrowing and irritating influences that make for discord in our lives. Against these influences we make headway only by creating a more sympathetic environment for ourselves—through the aid of friends, books, music, and poetry—by familiarizing ourselves with the great thoughts and creative activities of the world.

"But the goal we have been discussing throughout this article cannot be gained by taking thought *alone.*

"And here I think of Thoreau, who, finding the environment of his New England lacking in air and light, derived what he lacked from the religions and philosophies of the East; of Stevenson, a prisoner of ill health in the South Seas, reaching halfway across the world to profit by the fruits of European culture; of Roosevelt, in the African wilderness, reading the classics and masterpieces in his pigskin library. Likewise, I think of the Roman Emperor, Marcus Aurelius. A man of noble thoughts and fine deeds, he, too, created for himself the environment that he desired. It has been said of him that he felt free to *think* whatever he chose, but that he accomplished this *by keeping about him the books that suggested the kind of thoughts that he desired to think and the kind of acts that he desired to emulate.*"

UR LUBRICATION

ALL THESE FEATURES

VIN-IGNITION MOTOR

ALL THIS EQUIPMENT

ORLD'S EASIEST DRIVING CONTROL

AT NO EXTRA COST

THE new features and equipment of the Nash "400" have added hundreds of dollars of actual, visible worth to this world-famous motor car.

They have added an incalculable measure of enjoyment to Nash ownership.

Yet they have added nothing to Nash price.

At no extra cost, you have the Twin Ignition motor, the year's outstanding motoring improvement (more power, more speed, less gasoline).

You have costly car interior finishes, Bijur Centralized Chassis Lubrication, Houdaille hydraulic shock absorbers, bumpers front and rear, even a spare tire lock, and not a dollar added to the price.

Equipment which other dealers (not Nash dealers) charge extra for, at retail prices, is included in every Nash "400" model, as it comes from the factory, at no extra cost.

That is why you will find that "400," fully equipped, delivered prices are so much less than fully equipped, delivered prices of other cars with similar or even lower factory (f. o. b.) prices. Compare the cars, compare the prices, before you buy.

HOUDAILLE SHOCK ABSORBERS

Dare-Devil

(*Continued from page 42*)

use arguing with her, because she didn't know how to argue.

"Please, Ben!" she would say. "Let's just try it that way."

So the servants went and they sold the car.

That summer they went far out into the country, where for very little money they could get a house with a large garden that was a paradise for babies. It took him two hours to reach the city, four hours out of every day, but he was glad to do it, for there was a beach near by where Marie took the babies every bright afternoon and had a swim while they played on the sand. She had grown sunburnt again, her old vivid, eager self. She managed her house with the quiet competence she put into everything; it was wonderful for him to get home to that welcome of hers, to a good dinner, to the sweet country peace of that little house.

One day he had news which he was reluctant to give her. He waited until they were sitting on the porch, after the babies were asleep.

"Have you heard—about Emily?" he asked. And hated to ask.

"Yes," she answered. "I've had letters. . . . Isn't she splendid?"

He wished it were not too dark to see her face. She and Emily Dearborne had been in school together. Now Marie was here, busy with housework and the care of two little children, and Emily was very much in the public eye as a flyer.

"She came into the office today," he went on. "She wants to come and see you. She—wants to fly out. . . ."

"Oh, Ben!"

What was that in her voice? Pain? Regret? . . .

"I struck for a raise today," he said hastily. "I don't know if I'll get it now—but I'm sure to later. And as soon as I do, we'll buy a car."

She got up and came over to him, bent and kissed him.

"Ben!" she said. "My dear old Ben!"

"Oh, Marie!" he cried. "I didn't mean things to be like this!"

She put her hand over his mouth, and kissed him again.

THEY had no telephone in the house, and no near neighbors. Marie was alone with the children the next day when little Ben fell. He had climbed up on the porch railing, and when he fell, his head struck the flagged walk. He was unconscious, and his leg was bleeding from a cut made by one of the big conch shells that lined the walk. It was a bad cut; she made a tourniquet for it, but he needed more expert care than she could give.

She put him into his sister's go-cart, with a pillow behind him and a strap round his waist; then she tied on Nan's sunbonnet, and set off. Before her she could see little Ben's dark, curly head, limp on the pillow, and his rumpled sailor-collar, and she wanted to run. But little Nan could not hurry. Clinging to her mother's hand, she trotted along as fast as she could, awe-stricken by her brother's strange silence, by the sight of him in her carriage. But presently she began to cry.

"My foots is tired, dee' Mammy!"

Marie picked her up, kissed her hot, tear-stained face, and carried her in one arm while she pushed the carriage before her. She reached the house of their nearest neighbor, but it was locked; they had all gone out for the day.

So she went on. It seemed to her as if Nan's little clinging arms would choke her, as if the weight of that drowsy little body would crush her. On and on, down the unshaded road, in the fierce blaze of the August sun, on and on, with little Ben never stirring.

"My babies . . ." she said to herself, over and over. "My babies. . . ."

IT WAS late in the afternoon when the doctor drove them home, little Ben still very white, but filled with importance.

"I reckon Daddy will give me a present," he said. "I was inconscious!"

"So was I!" said Nan.

"Don't let her talk so silly, Mammy!" said little Ben. "She was *not*."

"Don't be cross, babies," said Marie, "and you'll have ice cream for supper."

The doctor was quite willing to stop for the ice cream. He was a kindly man, and he had a great admiration for Marie.

When they got in sight of the house, he gave a whistle of amazement. For in the field next to the house was an airplane, and the pilot, in leather jacket and breeches, was talking to Ben.

"And it's a woman!" cried the doctor.

He got out and lifted down Nan; he would have taken little Ben, but his mother had him in her arms.

"I could walk," said little Ben valiantly. "On'y maybe I better not."

Ben was coming toward them, with a face white as chalk.

"He's all right now, Ben," Marie said, and let him take the child while she told him what had happened.

"Nan felled down too!" cried the tiny girl. "Daddy! Looka my drefful sore!" And she held up a plump brown leg.

Emily came hurrying up then, full of sympathetic interest in these domestic mishaps.

"I wanted to take you up," she said. "But I'll have to get back before dark. You'd love it so, Marie. It's so exactly your sort of game. You used to be such a dare-devil."

"Dare-devil!" said Ben, with a queer sort of harshness. "She's dared about all the devils there are, and—" His voice was unsteady; he turned away abruptly. "And knocked the spots out of them!" he said.

Marie stood with little Nan by her side while Emily took off; the plane, running across the field, rose and rose in the clear, pale sky that the sun had left. Her face was lifted to follow that swift, beautiful flight. . . .

Then little Nan pulled her dress, and she looked down, and smiled. Hand in hand, they went toward the house. Ben had settled the little boy on a sofa, and he came to meet them. And she saw in his eyes a look that lifted her heart as if on wings.

WIDEN YOUR ROOMS WITH COLOR

The pastel shades of Mello-Gloss on the walls and ceilings of every room in your home

PAINTED walls . . . walls with the soft beautiful shades of Mello-Gloss . . . they are the first essential in interior decoration.

The size of your rooms is not alone a matter of physical dimensions. You can do much to widen and lengthen them by a skillful use of decoration and color. The pastel shades of Mello-Gloss seem to make your walls retreat and form a soft, harmonious background for every room in the home.

Mello-Gloss is a washable paint made in a wealth of soft, charming shades. It dries quickly to a smooth, semi-gloss finish which does not readily catch or hold dirt. It can be cleaned easily and quickly with soap and water or with Lowe Brothers Cleaner.

Mello-Gloss is but one of the outstanding paint products prepared by Lowe Brothers. It is made primarily to do one specific thing . . . to give beautiful and lasting color to walls and ceilings . . . and it does that one thing superlatively well.

FREE BOOKLET "Color Harmony in the Home" at any Lowe Brothers dealer. Profusely illustrated in colors with valuable information on home decoration. Or mailed direct for 10 cents in stamps.

All Lowe Brothers paint products are made to meet specific requirements and there is a product for each decorative and protective need. When you are planning the painting or decoration of your home, and now is the time to plan it, go to the Lowe Brothers dealer in your community. He will be glad to give you the Lowe Brothers Color Cards and help you select the products and the colors you should use for each particular surface. (*Continued from page 17*)

of what their successors would do—which the British used on the Somme in the autumn of 1916. They were the result of long study and experimentation kept as secret as possible—but not secret enough. German spies had reported on them before they first spread dismay among German infantry. Those reports, rather vague as to detail, but substantially correct, had reached Fräulein. She had turned them over to her technical adviser for his expert opinion. That opinion had been whatever was in 1916 the German equivalent of "Boloney!" The British might succeed in building a tank, he admitted, but under modern battle conditions on the Western Front, it would accomplish nothing. Then came the first tank attack, warning of what would come later when Ludendorff said that Allied tank attacks were one of the principal causes of German defeat. Fräulein summoned her technical expert.

"Here," she said, her large eyes flashing, a sneer on her lips. "Here, technical expert!"

She handed him a pistol—to use upon himself. And he did.

There is a story that Fräulein killed one man with her own hand—the Belgian who had gone through her school.

IT IS the ever-present atmosphere of romance and mystery intermingled that makes the woman spy more intriguing even than the man. Here are extracts from genuine letters of a German woman spy, one of Fräulein's pupils, that passed through the hands of the American secret service in late 1918:

Last night I made arrangements with the Deck Officer. Poor devil, he already loves me passionately. Think of it—he wants to marry me! He invited me to pay him a visit on board the ship. Of course I have accepted. I take it upon me to get into the map room in his company. Two dark eyes will do the rest!

* * *

The case of the Deck Officer has come to an end. The information was important. I am sorry for the man. He has touched me very much, but I am in the service of the Fatherland. I would gladly give my life if I could bring those hateful English to ruin.

* * *

I am interested in the old man, Mr. B., in the coal office. Women play a great part in his life. An attractive woman can do much. I don't know yet whether I shall act as a Dutch woman, or an American. There is also Herr I., a Dutchman, who hates the English "like a pest," and may become very useful to us. The plans and maps of the Netherlands military positions are printed there.

* * *

I saw Marie S. just before the departure of the convoy. She will give us information about the ships, and also as exactly as possible the place where they meet the warships. Believe me, if it is handled in the proper way, one can learn enough in their café! It is visited only by Englishmen, Norwegians, and Danes. She is on a good footing with these men and can be of the greatest use to us. When the English "gentlemen" have too much, they talk like anything.

* * *

I feel very uneasy. Yesterday morning I thought I saw the Spaniard who gave evidence in the Mississippi affair at Washington (White House) about what happened the night of June 11, 1912. It cannot be true, as he died on that terrible night. I don't like to be laughed at, at Stelle 1. I cannot forget it, though, as the Spaniard looked at me in such a sharp way. I have an idea that I am being shadowed.—H. E.

Please burn this letter at once.

Poor "Dark Eyes." Perhaps they were not seeing things and the owner was really being shadowed. Certainly her letters were being intercepted, and the parts quoted here show the methods of the average woman spy. But a semi-hysterical state, some authorities say, often makes her useless to her employers. Like, for instance, Bella Donna. The American secret service in Switzerland fooled her not so long after the capture of The Master. Here is the story:

ONE of G-2's best stunts, also one of the biggest practical jokes one army ever played upon another, was the Alsace Ruse. By scheming and tricks the Germans were warned of a big American attack in Alsace to reach the Rhine, when really we were preparing to attack some distance away, at St. Mihiel, and later even farther away, in the Meuse-Argonne. Major General Omar Bundy, commanding the 6th Corps, and his Chief of Staff, Brigadier General Briant H. Wells, were sent with staff officers to Belfort in French Alsace, where they openly established headquarters and drafted plans for the fake attack, while parties from seven American divisions reconnoitered the French trenches.

Then came a stroke of genius. Colonel Conger wrote General Pershing a letter outlining the Alsace attack plan, and saying all that was needed now was the Commander's O. K. He made a carbon copy of the letter. Then he threw the crumpled carbon paper into the wastebasket of his hotel room in spy-infested Belfort, and went out. When he returned soon afterward, the carbon was gone. The Germans prepared to evacuate Mulhouse, our "objective," moved more troops to Alsace, and made other arrangements showing that they expected an attack there.

Then there was Lieutenant Colonel B., who first reserved billets for twenty-five American newspaper correspondents, still to come, and made thorough inquiries about the Belfort postal and telegraph facilities for handling a sudden flood of despatches they would file.

Belfort was less than twenty miles from the frontier of Switzerland, that great switchboard of the German secret service whence news would flash to Great Headquarters at Spa and to Berlin. In Berne was even a better place to sow the seeds of false information, and the chief of the American secret service there was so reminded. "The Americans," he was informed, "are going to make a big attack in Alsace. The German secret service may be interested to hear about it. See that they do." A few days later the German chief in Switzerland began to get reports.

"X. and Y., suspected American agents," was their purport, "are going to

all the libraries and bookstores in Berne, searching for information about Alsace. They ask for data about geography, topography, railroads, roads."

Geography, topography, railroads, roads! Just what an invading army must know about. The German chief handed those reports to his best code expert. "Get them into Germany immediately!" he ordered. Then he called in some agents, among them the heroine of this piece, the damsel Bella Donna. "Bella Donna," it might be explained, was what the Americans called her.

Her eyes had won the name for her. Those great, luminous black orbs were prominent features of the lobby in the celebrated Bellevue Palace Hotel in Berne, during four years of untold espionage and intrigue by a score of nations. Here was her hunting ground, masculine Allied officials or officers her prey. Bella Donna was right at home in European hotels. She was, one might say, a natural-born lobby vamp.

She was a handsome creature, dark, tall, graceful, with the exotic Russian air and gestures. Perhaps that was why the German chief had "put her on" the Americans, to scrape acquaintance with young secretaries of legation or military attachés, who were young enough to be gallant and to succumb before those lovely eyes. So she ogled and rolled and flashed them, but to little purpose. The Americans simply would not succumb.

"Wonder what she puts in those lamps?" they asked one another, and christened her "Bella Donna." Her real name does not descend to us. Now the German chief told her:

"You have one last chance. We hear that the Americans are going to attack in Alsace. We must have confirmation. If you can get it, you keep your job. If not, you lose it."

SO THAT evening in late August, 1918, the woman spy posed herself fascinatingly on a hotel divan, scanning soulfully, if a little anxiously, the cosmopolitan crowd that flowed in and out. American faces remained impassive, unmoved by arts of veiled seduction that years in the German service had taught her. Then the eyes flashed, as with long strides a tall, rather youthful man crossed the lobby. A big fish, she thought, in a position to know something about the Alsace attack, if anyone was. Hitherto, theirs had been only a bowing acquaintance. Could she land him now? She turned the eyes upon him—and they worked.

"Why, Mademoiselle," he beamed, coming up with outstretched hand, "you are charming this evening. And who could resist that smile? Won't you come into the bar and have a cocktail before dinner?"

"Bar? Cocktail?" Bella Donna heard the words in a rosy mist. "I should be charmed, Monsieur," she said demurely.

There was a laughing, noisy crowd in the bar, and at once her escort caught its spirit.

"Otto," he cried to the rubicund bartender, who was something of a character in Berne, "Otto, the two stiffest Martinis you ever mixed! Then two more—and make them stiffer."

In the little partitioned nook, they were gay and talkative, speaking first French, then English, which both knew well. But as the Martinis grew stiffer, the American's tongue grew thicker. His head rolled, then fell forward upon his chest. He slept. Now the great eyes flashed indeed, as Bella Donna leaned forward.

"Otto," she whispered, "come stand in front of us." Then, shielded by the broad, aproned figure, rapidly and with expert fingers she searched the American, and with a little cry found a long, narrow envelope.

"Let him sleep a little, until I return," she told Otto, and disappeared.

IN HER room in the hotel she lit an electric heater under a small teakettle, steamed open the envelope and drew out the single sheet, folded twice, of an American official paper. What she read made the eyes glow with triumph. It was an order, in proper official form, from General Nolan, commanding G-2 at American G. H. Q., France, to the chief of the American secret service in Switzerland, directing that he send at once to G. H. Q. all men in his service who had ever been in Alsace, or had special knowledge of the country, or spoke its patois. Intelligence officers for an invading army! The very thing the German chief wanted.

Bella Donna worked quickly. Disconnecting her electric wire from the heater, she connected it again with a little box-shaped instrument taken from concealment. Before this she set up the precious paper. Soon she had an excellent photostat of it. Replacing the original in the envelope, which she glued shut and dried carefully, she hurried again to the bar. There still slept the American. Again shielded by Otto, she replaced the envelope. Then she shook the young man.

"Come, Monsieur Sleepyhead," she cried gayly, "you have slept long enough. Let us dine."

Slowly the American raised a befuddled countenance.

"Wha'? Wha'?" he stammered, then, with a sudden look of alarm, clapped his hand to his inside coat pocket, then heaved a sigh of relief. Bella Donna struggled to keep triumph from the famous eyes. She bolted her dinner in manner American, made an excuse, hastened to the German chief.

"Here," she said, extending the photostat. "And you must apologize for ever doubting me. And I want a hundred marks more a week!"

Meantime:

"Hook, line, and sinker!" the American told his chief exultingly. "Once, though, I thought it was all off. When she was searching me—she tickled."

"Guess I'll plant a waiter or a bus boy in that bar," the chief mused, "now that we're sure Otto's in with them."

The real American attack, of course, came September 12 at St. Mihiel, one hundred and twenty-five miles northwest of the Alsace front. Doubtless somewhere in the smudgy pages of the history of secret service in Switzerland is written what happened to poor Bella Donna.

The men who were higher up did not always take the women spies very seriously. For instance, there was the case of "Irene." She worked for the Austrians, most of her activities being confined to Switzerland. One day Irene showed up at the office of an American official, offering to sell him some valuable infor-

You don't have to be an expert to use Corona

By a Modern Girl

I HAD an interesting experience recently. I was down town shopping. "What beautiful colored typewriters!" I exclaimed. I had stopped beside an attractive counter display.

"They *are* beauties, aren't they?" replied the man behind the counter. "Wouldn't you like to try one?"

"Oh, no, thank you. I'm not expert enough. I never used a typewriter in my life."

The clerk laughed. "You don't have to be an expert to use Corona. Children in the first grade in school use them."

"How long does it take to learn?"

"You can learn the fundamentals in a few hours—that is, after you have read a helpful little book that is given free with every Corona."

That was three weeks ago. Now I have my own Corona. What a joy it is! I write all my letters on Corona. It seems actually easier than writing by hand—and it's much more fun. The clear-cut lines of type make my letters look neater than they ever did before. Many of my friends have complimented me on them.

. . .

This story is typical. Thousands of people are discovering that Corona is astonishingly easy to operate—that it is a wonderful convenience for office or home or travel—that it makes letter-writing lots of fun. Furthermore, the very features which enable beginners to write more easily, enable accomplished typists to *greatly increase their speed.*

You owe it to yourself to drop into a store where typewriters are sold and see Corona. The minute you lay eyes on it you will realize why a million people use it—why 30,000 Coronas were used in the World War—why more novelists, more newspaper men, more business men, more schools and colleges use Corona than all other portables put together.

For a small down payment you can take a beautiful new Corona home with you today. The balance may be paid in easy monthly installments. Don't neglect this opportunity. Don't let another day pass without doing something about it. Know *now* the joy of owning a sturdy, speedy, smooth-operating Corona—The World's Champion Portable.

An interesting illustrated booklet called "Corona Typewriters," which describes Corona in detail, and contains beautiful illustrations of the new color models, will be sent you upon request. No obligation. Simply mail the coupon.

CORONA IS THE WORLD'S CHAMPION PORTABLE ON 8 EXCLUSIVE POINTS

1. STRENGTH: *Strongest frame of any portable typewriter — solid one-piece aluminum, rigidly braced.*
2. SIMPLICITY: *Fewer parts than any other standard-keyboard typewriter.*
3. COMPLETENESS: *More big-machine features than any other portable typewriter.*
4. EASY TO LEARN: *Corona design is the result of 20 years' study of the needs of beginners.*
5. WAR SERVICE: *An unequalled record for durability as the official portable of the Allied Armies.*
6. POPULARITY: *Corona has a million users. As many Coronas have been sold as all other portables combined.*
7. DURABILITY: *Coronas purchased 20 years ago are still giving satisfactory service.*
8. BEAUTY: *Graceful in line; exquisitely finished in every detail.*

Your business exists by the *minute*

The Ediphone has set the tempo of modern business. It eliminates two time-wasters—buzzers to summon a stenographer and shorthand dictation to demand "twice-written" letters. The total of minutes saved can easily add an hour a day to the average dictator's free time—a month every year for him to devote to your mutual interests.

Let us prove this at your desk. Telephone "The Ediphone", your City, and ask for the book "An Easy Way to Chart Your Correspondence."

mation about a cable-cutting job. The information seemed straight, the American paid for it, and hustled it to his chief.

"Why didn't you get that information sooner?" the chief demanded. Irene had told the truth, but told it too late.

The American thought little more of it until the Peace Treaty was being negotiated, and then one day he met the Austrian who had employed Irene, and they fell to talking.

"You bought some information from her, didn't you?" asked the Austrian.

"Yes," said the American, "how did she happen to turn?"

"Well," replied the Austrian, "she made herself such a nuisance around our place, always wanting more money, that I thought I'd give her some stuff to sell to you and let America pay her running expenses for a while. The information was good and of the sort that you would recognize as good—but I saw to it that she did not get to you in time to do us any harm. It was an easy way to get rid of her."

A FAVORITE German trick that American and other Allied attachés, diplomats, and officers had to be always dodging in Switzerland was a variation of the familiar "Badger Game." Women spies would endeavor to lure them to hotel rooms, where they would be discovered by "husbands" and threatened with exposure if they did not leave Switzerland at once. Sometimes the lure was a promise to give valuable information.

Among the sisterhood with Bella Donna, "Turkish Delight," and other women spies, was an Italian woman, with a beautiful oval face, splendid figure, and a "Come and get me" manner. She tried all three on a certain American, who reported the experience to his chief.

"See what she wants," the chief ordered, "but watch yourself."

So next evening, when they met in the Bellevue Palace lobby, things progressed almost as rapidly as they had for Bella Donna. As the Italian arose to go, she whispered, "Come in a few minutes to my room, and I will tell you something your government wants to know." The American nodded, and, shortly, rapped softly, but with some trepidation, upon her door. He could not but wonder what trap awaited, even though comrades were "covering" him.

The door opened, disclosing about what he had expected—his hostess clad mostly in a *peignoir*. The fair enchantress was at her most enchanting as she led him in and indicated a chaise longue. Then, as he moved toward it, she stooped, as if she had dropped something, locked the door and slipped the key into her bosom. The American leaped across the room.

"What are you doing?" he cried, and seizing both her arms, shook her like an old coat. As he had hoped, from somewhere or other the key fell to the floor. He pounced upon it, unlocked the door. Nobody in the hall. He stepped back into the room, past the amazed woman evidently struggling with very mixed emotions. He ran to the heavy curtains swathing the windows, ripped them aside, disclosing—nothing.

"Must be a dictograph somewhere," he said to himself, sitting down on the edge of the primmest chair in the room, as far as possible from the chaise longue. "And now, Signora, what was that information you were going to give me?"

He had outraged the Signora's finest feelings. How could he suspect her? Was she not Italian, a friend of the Allies? But there was room for two on the chaise longue. No? Reluctantly she began to tell about a new German plan she had heard of, "on the very best authority," to beat the British at their own "Q Ship" game. There would be a merchant ship with neutral flag, Swedish, Norwegian, whatever, steaming along the surface. Lurking beneath, always following, would be a submarine, to stab whatever patrolling Allied war vessels should search the neutral. They had also a clever plan to refuel submarines at sea by neutral ships. That was the Signora's information, drawn from her piecemeal. True, or made in the German rumor factory? All the American could do was pass it on to G-2-B, to be weighed and estimated. So, to the Signora's apparent disgust, he got up and left. Next day, so did she, and the hotel saw her no more. Pique, or was her job done?

Whether or not there had been a dictograph in her chamber, those inquisitive instruments played a part in American secret service, as in any other.

How many of the A. E. F. remember that hotel in the Rue D., not too far from the Boulevard des Capucines patrolled by boulevardières? A find, that hotel, with unobtrusive entrance, leading to comfortable rooms, and, despite regulations, always hot water and every other "*confort moderne*." So discreet, so safe.

That was where some of the dictographs were. Through long winter evenings, stenographers, American and French, listened to many a conversation between an American officer and some pretty lady, perhaps a German agent seeking information, or a French agent helping to spot loose tongues that should be sent where they could wag harmlessly. Time after time, listening stenographers wrote, "'Ow mannee Americain arrh on France?"

Their pothooks caught odd fish sometimes. One operator nearly broke the apparatus when there smote his ear the well-known voice of a certain high-ranking officer—but using language he had never heard that officer use before. The officer got a new, safer job far from Paris and the boulevardières—and wondered why.

There was reason for the warnings spread through the A. E. F. about *les petites femmes*.

MORE women did American Intelligence work of one sort or another in the United States than in Europe. Women of high, low, and no social position played the game, lured by desire to do something for their country—and to get a thrill. Many were volunteers, American, Allied, and German. The amateurs furnished most of the fireworks.

Intelligence suspected an Austrian Baron of violating his parole and doing some quiet spy work for the Central Powers. Shadowing about New York showed him engaged in several intrigues, to be sure, but not the sort suspected. The Baron was a ladies' man. Suspicion persisted, and it was decided to put a woman on him.

"She's got to be a good-looker," the

Arizona hunter tracks down big catch ... *for his pipe!*

Stranded in hot desert, pipe-smoker finds oasis of comfort in this little blue tin

ASK Mr. Kirby, a victim of the stifling heat of the desert, and he'll tell you it's mighty uncomfortable to hunt for your favorite pipe-tobacco and find you've lost your pouch. Unless (as it so happened) one of the boys has a welcome "shot" of Edgeworth to fill the breach.

Mr. Kirby says it certainly did *more* than that for him. For from the moment he packed his pipe with Edgeworth the world seemed pretty good again. And now he's made up his mind he'll never smoke any other brand.

Not all pipe-smokers are brave bold hunters. But nearly all pipe-smokers are calm, serene fellows. Pipe-smoking runs to sound, thinking men—not to the nervous, helter-skelter breed. Somehow with a briar between your teeth you simply *can't* be hurried into nervous, jumpy decisions.

But you don't have to wait until you're stuck in a desert to try the powers of Edgeworth.

Try this FREE *offer now!*

How long is it since you've had *your* pipe out? Weeks? Months? Perhaps it's because you've lacked proper fodder. If so, let us send you *free of charge*, a trial package of Edgeworth Ready-Rubbed smoking tobacco so that you can try it in your pipe. Simply write your name and address to Larus & Brother Company, 45 S. 21st Street, Richmond, Va.

Battle Mountain Sanitarium,
Hot Springs, So. Dakota,
December 5th, 1928.

Larus & Brother Company,
Richmond, Va.

Gentlemen:

One day in the desert, in Arizona, I went out on an all-day shooting trip, and left my pouch at home, and did not discover it until I was miles from town. Well, I was disgusted. The sun was shining hot as the devil that day, and everything was dancing in the heat, and I soon got a headache.

Now a queer thing about these headaches I have is that tobacco relieves them. So I asked one of the boys for a pipe of tobacco, and he handed me a tin of Edgeworth. Well, I thought here was the place where I was going to ruin a perfectly good pipe.

But I got the biggest surprise of my smoking experience. For the pipe tasted just as good as it ever had with the other brand, and was quite a bit cooler, too. I smoked three or four pipes before we got through the day's shooting, and when I had finished there was no dryness of mouth and throat, and no unpleasant taste in my mouth.

You can be sure I have never smoked any more imported mixtures since that day, and as long as Edgeworth is what it is I will use no other. I want to thank you for a really fine tobacco, than which there is no greater rarity in this machine-made country.

Sincerely yours,
(*Signed*) McKinley Kirby

(*All Edgeworth endorsements are genuine—unpaid and unsolicited.*)

Two forms—same blend—both for your pipe 15¢

Edgeworth "Ready-Rubbed" is sold in various sizes from small pocket packages to pound humidor tins. Also "Plug Slice" Edgeworth comes packed in thin slices, for pipe-smokers who like to "rub up" their tobacco in the palm of the hand.

How's your optimism *after meals?*

MOST pessimism, according to a wise observer, comes from bad digestion. And most bad digestion comes from carelessness — quick meals, big meals, weird meals. Have a stick of Beeman's Pepsin Gum after eating. Help your digestion this pleasant, wholesome way, as millions now do. You'll like the fresh, keen Beeman's flavor, the smooth way it chews. For over 30 years it has been a favorite among thinking people as a delicious aid to digestion.

BEEMAN'S PEPSIN GUM

aids digestion

shadows reported. "He's some picker."

Where search for good-lookers but in the chorus? Especially as a well-known New York theatrical producer was a valuable member of the Intelligence forces? He produced a girl whom the shadows pronounced a good-looker. They arranged for her to meet the Baron, then told her what to do. She was the peaches-and-cream blond type, sufficiently upholstered, that would appeal to a Teuton. She was to tell the Baron she was of German descent, worm her way into his confidence, and find out what he was doing for Austria.

The first week passed without news. "Probably just getting started," they thought. Then a second passed, and a third. No reports. Then this note:

"The Baron and I were married this morning. Thank you."

He was a real Baron. Explaining, perhaps, why girls go on the stage, and into secret service.

THE greatest center for that game in this country was, of course, wartime Washington. There was nothing imaginary about the presence there of agents and friends of Germany eager to pick up precious nuggets of information and forward them across the ocean, usually by South American countries and Mexico. In Mexico City was a German spy center not unfamiliar to the German Legation, that sent more than one agent to the United States. One was the famous Pablo Waberski. Another was a dangerous woman spy, who was not caught until she had worked for some time in Washington and had nearly done very serious harm.

One of the most important Government departments guarded closely its many secrets. In a special camouflaged safe were kept papers, drawings, letters, whose possession would certainly mean thousands of lives and millions of marks to the Germans, and might, in a few cases at certain times, have meant the difference between victory and defeat. The men who saw the contents could have been counted upon one hand—whereof one finger would have been President Wilson. The safe had a guardian, who almost alone knew its secret and how to open it. He had an excellent record as a Government servant and was trusted.

But does secret service entirely trust anybody? The safe's guardian was watched, from his getting up in the morning until his retiring at night, and it is lucky he was. He began spending his evenings with a beautiful, dark woman of Spanish type, unknowing that everything he did was noted. Infatuated, he became not alone indiscreet, but disloyal. To their amazement, the shadows beheld the woman and this trusted officer enter a certain apartment house in a quiet Washington street. The shadows knew that in that house was a small apartment, ostensibly that of a bachelor business man, actually conducted by a branch of the government as a hidden rendezvous for confidential interviews. The guardian of the safe was one of the few who had keys, with fully understood restrictions governing their use. The shadows telephoned their chief:

"He's taken her up to the apartment."

"Grab them both!" the chief exploded.

The third degree revealed, first, that the beautiful dark stranger was from the German spy center in Mexico City, caught as she had begun to weave around her intended victim a web of blackmail from which he could have escaped only by giving up the secrets of the safe.

At least, so the Intelligence officers believed who questioned her. She got off easily—deportation to Mexico. He, of course, no longer guarded that safe.

DOES this narrative seem unfair to women spies? The failures among them, of course, come to the surface, the successes remain often hidden. To right the balance there is one more story, to Americans perhaps the most touching story of all. Unfortunately, it must be told briefly, without official authority.

There was one American woman spy who played for a great stake, won, and died.

It was in Austria-Hungary, where American secret service accomplished more than is generally known. The former dual monarchy was, for various reasons, a better field for American agents than Germany. One of these American agents was a woman, who some say had been in Austria-Hungary before the war, and others say got in through the efforts of an unusual personality, a friend of the present President Masaryk, who operated partly with the amazing Czechoslovak secret service.

In the early fall of 1918 she decided upon her great coup—to hasten the downfall of Austria-Hungary then imminent from internal dissension, war-weariness, and near famine. She was not in Vienna, but in another large city, very possibly Prague, for she had help such as few within the iron ring but Czechoslovaks would have given. On a concealed printing press she printed thousands of the tickets on presentation of which the hard-pressed people could get bread or meat. Then she distributed them to many agents, some knowing, some ignorant of what she was doing. There came a rush on provision stores that stripped them, throughout a province at least. People who for years had not eaten their fill, went on a food drunk. Then came the cry, "There is no more!" Now real famine threatened, and that threat, the story runs, hastened the peace overtures of the already willing Emperor and the proclamation that part of his former realm was to become the Czechoslovak Republic.

But the fabricator of the false food tickets had been traced, arrested, and, woman or no woman, executed with short shrift. She knew, of course, that that would be her fate if she were caught. Yet she did her bit to end the war.

How that woman died, where she was buried, under what name, who were her family or friends, the writer does not know. The story he has told comes from three sources, all reliable, none official. Surely somewhere among our official records there must be a clue which, if followed, would enable the American people at least to know who was their World War heroine who lies in an unknown grave.

EDITOR'S NOTE: Mr. Johnson's next article will be about "Our Secret War" and how it was carried forward by fifty thousand Silent Watchers and a few hundred soldiers of fortune known as Intelligence Police. It was the work of two I. P.'s that made possible the brilliant surprise attack by the Americans at Cantigny. . . . That and other thrilling tales are told in this next article.

LEGACY FINDS PERFECT EXPRESSION IN THIS 3-PIECE TEA SET, $65 · LEGACY TEA SPOONS · "EIGHTS" $5.00 · "SIXES" $3.75

LEGACY · *the New pattern*

No silverware pattern in history ever scored the instantaneous success that has greeted LEGACY . . . In the six months since its debut it has broken all sales records.

The reason is delightfully self-evident in the pattern itself. It is the first truly modern pattern in silverware . . . the first to embody the crisp, straightaway lines of modern art.

New as the latest issue of Vogue or Harper's Bazar in its modernity. But with four generations of 1847 ROGERS BROS. Silverplate artistry back of it. Lucky is the bride who is starting her silver service with LEGACY.

8 Large National Advertisers *listen in on the Family Dinner*

THESE organizations—eight of the most successful advertisers in the country—are, of course, vitally interested in getting the most out of the advertising dollar.

Working independently of each other, these eight investigated the buying and reading habits of more than 23,000 American families, in scores of cities and towns. "What people influence the sale of my product?" "What magazines do they read?" were among the questions asked.

All eight institutions found that in the great majority of homes today, two or more members of the family influence nearly every purchase, whether it be toothpaste, pianos, fountain pens, or canned soup. No one person makes the choice. In over 69% of the cases it is a consensus of family opinion that makes the sale.

And as to magazine reading habits—the findings of these eight advertisers also coincided exactly. When asked which magazine was indispensable to the family as a whole — which it would vote to keep if only one magazine could come into the home—the answers were overwhelmingly in favor of The American Magazine.

• • •

Many similar surveys have recently been made by other large national advertisers, advertising agencies, associations, universities and research groups. In every one of which we have knowledge, the same results were obtained.

These studies point a clear way to reduce advertising waste. Since home buying today is governed by the opinions of the whole family, since the average family consists of 4.3 persons, and since The American Magazine is the outstanding family favorite — then The American Magazine offers the best means of telling and selling the whole family in 2,200,000 homes — at one advertising cost. It actually puts the advertising dollar on a 4 to 1 basis.

Write or telephone for detailed information on these surveys without obligation.

The Future of American Business

(*Continued from page 26*)

anything else. For the first time, every banker and manufacturer realized that the more money people have, the more things they can buy; that the desire for more things and better things is the mainspring of production. Through higher wages, we gave people the opportunity to indulge their desire for better things and more of them, and then, by development of more flexible credits through installment buying, we enlarged that opportunity. The basis of our prosperity is our own domestic market, which we have vastly enlarged by this simple process of increasing the power to consume. And don't think for a minute that this new spirit of wanting more things and being willing to work for them is confined to the United States. Individuals all over the world are potential consumers to the physical capacity of individuals here. All they lack is equal financial capacity, and that is not beyond their possibilities."

I pressed Baruch on this point.

"MONTHS ago," he said, "I drew up a plan on the lines of which I believed the reparations problem and the debt problem would ultimately be settled. The plan proposed a meeting of representatives of the Germans, the allied nations, and the United States, at which the whole question would be faced afresh. Ten years have passed since the Peace Conference and four years since the Dawes Plan went into effect. We are in a much better position now to know what Germany can really afford to pay and what is both possible and profitable, from the long point of view, in the matter of debt settlements.

"The settlement of the debt and reparations problems would bring such a revival of industry in the whole world, and the demand for things would be so great, that it would result in what, for want of a better term, we might call 'an industrial renaissance.' These two questions have been like dragging anchors to the great ship of international commerce, which has been slowly gaining headway and is only approaching moderate speed in this country. If the reparations question is settled by fixing Germany's indebtedness definitely at a sum that she can pay and is willing to pay, so the Allies can get money sufficient to meet their requirements and their debt to America, and if America will take some of this cash as a settlement, the whole international financial question would change immensely for the better. The higher standards of living which we enjoy here, the construction of railroad terminals, airports, magnificent roads, bridges, and tunnels, which have contributed so much to our progress, would be duplicated in other countries as fast as they are able to get the means. The automobile, and the airplane, the moving picture, television, and the radio would carry to the farthest corners of the earth accurate pictures of the standards of living of the better countries, creating desires to emulate them the world over—the irresistible urge to do, to achieve, and to have.

"Incidentally, the fair and proper settlement of this question will do more for agriculture than anything that could be done politically."

At this point it is only fair to Mr. Baruch to point out that he outlined his plan for settlement of the reparations question three years ago. I had talked to him about it early in the spring of 1928. Early in 1929, when this is being written, the United States has already agreed to the selection of Owen D. Young and J. P. Morgan as unofficial representatives to attend an international commission on the reparations problem. The best financial minds of Europe and of the United States have high hopes of some such solution as Mr. Baruch suggested.

His plan, or suggestion, was that the sum that Germany would pay should be definitely fixed in amount and should be a sum that Germany can pay and would try to pay. Under the Dawes Plan the railroads were obligated and certain first charges were made against the industries of Germany. Mr. Baruch proposed that of the amount fixed for Germany to pay, part should be represented by an issue of bonds to be secured by German railroads and industrials and to be a first charge against these properties. About two billion dollars of these bonds should be marketed, and the balance of the bonds, six or eight billions, held in escrow by the Allies, to be sold as and when the international markets would absorb them.

If the two billions or any proportion of them were sold, France, under the so-called "Spa agreement," would get 52% and the other countries their proportionate share, as determined by the same agreement. If France were thus to get 52% of the two billion, she would have one billion dollars in cash for any purpose for which she determined to use it. Mr. Baruch's main idea was that with such an amount, France could negotiate a cash settlement for her debt to America, and when further bonds were sold, she and England could make further cash settlements with us and still have a credit to their accounts in the balance of the bonds.

The bonds would be a first charge on all Germany, as they would be secured by her railroads and industrials, as outlined above, and be issued in all the gold currencies of the world—dollars, francs, pounds, lire, and marks. The citizens of the world would buy them because they would be the best bonds ever issued internationally.

MR. BARUCH'S suggestion was drawn up with the idea that if it were carried out, trade and commerce would so increase in the world that tax burdens could be lessened everywhere. If the United States were paid in cash, she could retire Liberty Bonds, reducing the yearly interest on her obligations, and give an opportunity for the reduction of taxes or the use of that money for some other purpose. When I asked him to discuss this plan in detail, he declined to do so because he said the matter was now definitely in the hands of the Reparations Commission. But he added, "I am not in

EVERY CAR NEEDS
SIMONIZ

MOTORISTS WHO HAVE HAD a lot of experience in the care of cars and have driven cars for years, know the value of Simonizing. They always Simoniz a new car before driving very far. They know the weatherproof protection that only Simoniz gives guards the finish from injury, and keeps their cars looking new and beautiful so long that they find it easy to get a good price on a trade-in . . . and Simonizing really saves them a lot of money.

Simonizing keeps new cars looking new and restores the lustre to the finish of cars that have become dulled, stained or discolored in use.

Simoniz Kleener removes all grime, stains and even blemishes. Then Simoniz gives immediate protection to all motor car finishes, including Duco and lacquer, makes them last longer and keeps their rich beautiful colors from fading.

Insist on Simoniz and Simoniz Kleener, and you will save money by driving a car that always looks new and beautiful.

SOME THINGS TO

GIVE

IF THIS JUNE IS REALLY IMPORTANT

A VERY excellent gift for the young man who is graduating—any man, for that matter—is a new Simmons Chain. The one illustrated is No. 30711, a white gold-filled Waldemar, at $9. The chain is smartly designed, yet its dignity keeps the modern spirit well within limits of good taste.

You're going to have difficulty with the Simmons necklace. To whom among all these June friends of yours shall you give such a delightful thing? This graceful necklace is No. 30508, an effective combination of simulated crystals in two shades. The price is $7.25.

Virtually all the better jewelry stores are able to show you these and other Simmons styles, including bracelets. R. F. Simmons Company, Attleboro, Mass.

SIMMONS TRADE MARK CHAINS AND NECKLACES

The swivel says it's a Simmons

the least averse to forecasting the results of such a settlement. I believe that trade and commerce all over the world would be immensely benefited and interest rates would lessen, because the demand for gold by the great central banks, which no longer would be dominated by fear, would lessen materially.

"Something of that sort," he added, "I am confident is going to be worked out. And when it has been worked out I believe we shall enter upon a new period of world-wide production and distribution which future historians may call the 'industrial renaissance.'"

I asked him what he meant by the term "industrial renaissance." "That's a new phrase to me," I said.

"Maybe it isn't properly descriptive, but I'll tell you what it means to me.

"I have already said that the desire for more and better things—for a higher standard of living—is the real beginning of increased business. Until people are conscious of the want for an article there can be no real market for that article. People saw the automobile and wanted it immediately. About the same time, increased wages and credit facilities made it possible for them to have it. That began the fabulous development of the automobile industry. People see airplanes, and when enough of them really want airplanes—are 'air conscious' as they say—then the airplane industry will be a prodigious industry.

"Now, this process of wanting is already spreading all over the world. The spirit of tearing down the old and building something new and better which you see on every hand in this country has spilled over into every other country. Everywhere in our own land are new roads, new bridges, new subways, new terminals. Everywhere the burden of toil is being lifted off the shoulders of men by machinery and lightened in the home by electricity. The movie and the radio and the airplane are carrying the picture of our new standard of living into every corner of the globe, and wherever the picture is carried there is created desire.

"BEFORE the war there were hundreds of millions of people who had too little hope and too much fear to desire anything. They were born to live and die within the same narrow limits as their fathers before them. If the father had been a peasant, the son must be a peasant; if the father had been a porter, the son could expect nothing better. Everything was fixed, curbed, static. Then came the war, tumbling over thrones, destroying feudal privileges, and wiping out feudal fortunes. The process went too far, of course, as in Russia, where the people experienced a rush of liberty to the head and attempted to beat economic laws that are as fixed and unbeatable as the law of gravitation. But the great effect of the war, aside from its suffering and destruction of wealth, was in jarring dead brain cells into life, throwing people out of ruts, striking down barriers and chains, and giving hundreds of millions of people the right to look forward, to hope and to have.

"When all that wanting and hoping begins to find expression through increased productivity, millions of families will begin to apply, in some degree, the American formula of 'work and have more.' There will follow, in my judgment, such an expansion of production, such a work of rebuilding, such an interchange of goods through foreign trade as we have never experienced before. For the first time in history, we have sound reason to hope for a long period of peace. For the first time, the business men of all nations are supplied with statistical information, together with some understanding of the laws of economics. For the first time, we have sound centralized banking systems in all the countries and close coöperation between these systems internationally. Because all these factors are favorable, and because of the universal stirring of desire and ambition to which I have already referred, I believe in the 'industrial renaissance.' We are already seeing something of it in the United States."

"DOES this mean that everybody will be prosperous: that there will be no more 'bad times'?" I asked.

"Not at all. There will always be inequalities in human intelligence and industry. You can go into any state today and find some farmers making money and other farmers, only a few miles away, having a hard struggle. You can find the same situation in retail stores on any Main Street. You can look into any big business and see two men who started as boys together and are now far apart. We shall never have any social set-up that can insure equal prosperity for everybody. But we are beginning to conquer some of the obstacles which have unfairly handicapped humanity in general in the past.

"Think for a moment what a cheering spectacle the past century presents. In that period we have practically removed the scourge of famine from the world. Only a century ago it was considered inevitable that some portion of the race should be afflicted with famine almost every year. Food rotted on the ground in one country while people were starving only a few hundred miles away. China and India, where population is dense and modern methods have made little progress, still suffer periodically from famines, but the rest of the world has abolished this specter. Agricultural machinery has made it possible to farm many acres instead of a few; transportation, cold storage, and other scientific devices enable one section of the world to exchange its produce with other sections that are thousands of miles away. We are within sight of the day when everybody in the world will have enough food all the time.

"Similarly, we are making great progress in the conquest of disease. Smallpox, typhoid, diphtheria, yellow fever, and diabetes have been, if not conquered, at least greatly diminished through the magnificent work and sacrifice of scientists.

"Today, with the motor, the radio, and improved sea, land, and air travel, and with television almost upon us, who shall be alone, what place isolated, who be separated from the comforts and solace of his fellow man?

"Our generation has seen the first halting steps toward the abolition of war, and more good influences are at work in this direction than ever before.

"One foe we have made little progress against until very recently—namely, the panics and depressions in business which from time to time have shut down indus-

What can you give him to help him towards success?

Below, *The* "SPUR"—*more than a miracle of workmanship. A definite flair for the modern—that has not lost its sense of dignity. In 14k yellow or white gold with 19-jewels, $125.*

Other strap models at $50 upward.

The "WHEATLAND"—*harmoniously designed, with a Gothic face, this exquisite Hamilton holds a subtle beauty all its own. In 14k filled green or white gold, engraved (as shown) $50.*

IN a dozen little ways you've always thought of him almost as a child. "The boy," you said with a sigh of relief, "oh, he's still at college."

But now "the boy" is about to step into a new world. On his own. For better or worse.

Do you know that your graduation gift to him can actually be something that will help him to success? Do you know that the world can tell a success—or a man on the road to success—by the time he carries?

After firing the question, "What time have you?" at hundreds of men in every walk of life this fact stands out: the higher you go in business or the professions the more exact watches you will find.

So give the graduate a Hamilton.

Successful men carry watches that are accurate *to the dot* . . . and a surprisingly large number of these men have Hamiltons in their watch-pockets or strapped around their wrists. Hamiltons range from $48 upward.

Let us send you a copy of "The Timekeeper," a booklet that will prove of much value when you choose that graduation gift for your son or daughter. It not only shows a complete line of beautiful Hamilton models, but tells something of the exquisite care that goes into their creation. Address Hamilton Watch Company, 883 Columbia Avenue, Lancaster, Pennsylvania, U. S. A.

For the girl graduate

The "CHEVY CHASE"—*a new 17-jewel woman's ribbon model with a combination 14k white gold enamel and engraved case, silver dial with inlaid enamel numerals, $80. Others at $75.*

Farm Trade Tips

Volume 1 — Business Building Ideas for Rural Retailers — Number 2

10 TRIED AND PROVEN BUSINESS BUILDING IDEAS

Yellow "Gold"

The Big Yellow Store in Iberia, La., finds that yellow paint turns into "gold" if you use it to establish "color identity." All their buildings are painted yellow. So are their trucks, wagons and outdoor advertising signs. They even use yellow stationery. The big store is the trading center for farmers for miles around. And it's easy to see how "yellow trucks" speeding along country roads constantly remind farmers of the store and its merchandise.

Uniform Charging

When he bottles and sells bulk goods, an Alabama druggist always writes the price on the *gummed* side of the label. Then when the bottle comes back for re-filling the price is visible—and no clerk offends the customer by charging him more than he paid before.

Shoes Sell Style

A smart specialty dealer in a Western state saw many a dress sale lost because woman's street shoes usually struck a false style note when they tried on new dresses. He doesn't sell shoes, but he laid in a stock of sample shoes which are now fitted to his customers before they try on new garments. Increasing sales show he has hit on a real merchandising idea. Shoes now correspond with dresses in his store—sales have increased—and his customers are pleased by this attention to one of the "little things."—*Dry Goods Economist.*

Customers Sell For Him

H. B. Harvey of Sacramento, Cal., devised a plan to let his customers do his selling on washing machines—with the result that his sales have increased, his selling costs have dropped away down, and the number of "reverts" has decreased. He was operating with a crew of 14 outside salesmen when he woke up to the fact that although he had a good paper profit, his cash reserve was actually shrinking. He was paying $30 commissions on "sales" that were not sales at all—over 20 per cent of them were "reverts." He went to his customers and said in effect—"How do you want me to sell electrical appliances to you—through front-door salesmen, or through some other method?" The emphatic reply was "Some other method!" With that he fired his salesmen and hired his customers. He now offers $10 to any housewife giving him the name of a prospect, payable when the sale is closed. The plan is working out excellently. Sales have gone up and he requires the help of only one woman demonstrator.

—*Electrical Merchandising.*

$ $ From Color

An eastern hardware merchant has discovered three new facts that help him sell more colored kitchenware. First, he says that the woman who comes in to buy brushing lacquer can almost positively be sold some colored kitchenware—and that the way to sell her is to suggest the colored ware as "a bright spot in your kitchen in harmony with its color scheme." Second, he found from tests that yellow and green kitchenware moves the fastest, and he always buys heaviest in these two colors. Third, he found that displaying colored kitchenware on a white enamel kitchen table resulted in few sales. He then tried colored backgrounds—yellow, red, green, orange, and finally *black* crepe paper. Black sells the most colored ware, he says, because it makes the colors stand out.

—*Hardware Age.*

Sell Paint to *Her*

Alex E. Brantley, hardware merchant of Troy, Ala., says that house and barn paint orders come in a lot easier if you start your selling with the farm wife. First, he says, get farm women interested in using brushing lacquer in their homes. His store put on a 3-day course in lacquering furniture—for farm women exclusively. It was a big success. And since he carries only one line of paint, from lacquers right up to house and barn paints, farm women for miles around are already familiar with his standard line and are sold on the results it gives.

Doubles Candy Sales

Up to about a year ago, John K. Thompson, leading druggist of Pendleton, Oregon, stocked a large variety of candy—but he wasn't making any money at it. Then he cut out all bulk candy and kept on only two lines of boxed candy—one nationally advertised and the other a local brand. And, of course, he continued carrying the popular five-and-ten-cent bars. He began using window display space to tie up to the advertising of the nationally known candy. In three months his sales doubled.

Send It To "Mrs."

The Chandler Hardware Co., of Sylvania, O., has a farm mailing list of 5,700 names, and each name begins with "Mrs." They find that mail advertising brings in more sales when it gets the woman's attention first.

Sell A Car

"We never sell a car on the basis of giving 90 days' free service," says Henry Stiles, successful car dealer of Alma, Mich. "If you offer anything 'free' in your selling you tread on dangerous ground with the buyer—for *his* interpretation of your 'free' offer usually varies from *yours*.

"The only free service we give is the 3000-mile inspection. That's for our own protection as well as the buyer's. But every other service is charged for at standard rates. Giving 'free' offers is weak selling. If your car is worth the price asked for it—sell a car, not a 'proposition' and keep your customers' confidence."

"White Elephants"

The Southern Colorado Public Service Company has three good rules for moving out "white elephant" stock without having the cut prices build up sales resistance against normal *list* prices. Here they are:

1. Advertise the *number* of items you have for sale at special prices, as well as the *nature* of these items. Tell buyers that when these items are sold your prices will again return to "list."
2. Tell your customers in your advertising *why* the specials are available—frankly, that you bought a little ahead of demand and must move the specials to make way for new merchandise. This gets over the idea that price-cutting is not a store policy.
3. Mark the items plainly as "demonstrators" "slightly used in display," or "reclaimed merchandise." This gives another sound reason for the cut prices and further forestalls conflict with standard list prices.

—*Electrical Merchandising.*

$10.00 *for Your IDEA*

WE PAY $10 apiece for acceptable farm trade "tips." Send in YOUR idea. This is not a contest. Send in as many "tips" as you wish—we may use them all. You don't have to be a store owner. Anyone connected with a retail store can submit ideas. The only requirement is that the idea must have brought in more farm trade or sold more goods.

"Farm Trade Tips" now appears regularly in *Collier's* and *The American Magazine* as part of FARM & FIRESIDE'S service to rural retailers.

Send your idea to—

tries and brought fear and distress to millions of homes.

"The point to be emphasized is that we now have certain safeguards which never existed before: the Federal Reserve Bank; the better understanding and use of statistics by the nations, by banks and industries, and by individuals; the coördination of the financial systems of all the leading nations; and the great increase of human wants and ambitions throughout the world which, with occasional and temporary setbacks, ought to provide a huge volume of business for many years to come."

"ASSUMING that all this is true," I asked, "how should the average man proceed in forecasting his own life for the next few years? What plans can he make for his individual investments?"

"Nobody can advise the 'average' man on investments and it is furthest from my thought to discuss the temperamental spirit of the stock markets. There are certain principles, but the application of these principles rests with the individual in the infinite variety of his circumstance. The average man keeps his eyes not more than half open. He does not train himself to see what is going on around him. He hopes that some day somebody will happen along and give him an inside tip, or some advance information that will make his fortune over night. As a matter of fact, the best tips of all are written so large and plain that anybody with imagination can read and profit by them.

"You asked me as we sat down how I happened to be interested in radio. Who could fail to be interested in it? Who, with any imagination at all, could experience the miracle of a concert in his own home and not realize that this is a new force which is bound to give rise to great industries?

A friend of mine was talking with an Englishman who had recently come from Canada. As they rode along in an automobile, the Englishman pointed to an A. & P. store. 'What's that?' he asked.

"'Why, it's a chain grocery store,' my friend responded. 'What kind of chain stores do you have in Canada?'

"'We do not have any,' the Englishman replied. 'That is the first one I ever saw.'

"My friend thought it incredible, but that night he wrote letters to three men in Canada, asking them about chain stores, and from each he received the same reply. A few months later he opened the first store in a chain which has now spread all over the Dominion. He has made a large fortune, but he might conceivably have made almost as much if he had merely stayed at home and invested in the chain store systems of this country. Any man who watched the early success of these great systems must have seen that this was the beginning of a new era of distribution, and that every soundly managed enterprise in this field would be profitable.

"When Alexander Graham Bell at one end of a wire called into his crude instrument, 'Watson, come here, I want you,' and Watson came, it was the beginning of fortunes for all who had the vision to look ahead. When Lindbergh flew the Atlantic, it opened a new day of interest and progress for the aviation companies. When the first crude motion pictures flickered across the screen, it signaled opportunity to another group of people. The great chances do not come secretly.

"Quite as important as inventions or industries are men to manage and be responsible for them. It is better to back a strong, able man than take a chance on the most alluring prospect where the management is untried.

"One of my associates in the War Industries Board was a big-boned, two-fisted man from Chicago named Alex Legge. Somebody rightly called him 'the Abraham Lincoln of industry.' He was at that time general manager of the International Harvester Company. The way he handled things gave his associates great respect for his ability, and when the war was over, many of them said to themselves, 'Let's just follow Alex.' So they bought International Harvester stock, to their great gain. So anyone could have done in a score of similar instances.

"The records of business leaders are no secret. Every man, even in the smallest town, is in a position to know something of the life stories and achievements of the men who are directing the important industries. If he does not know, his local banker does. Charles M. Schwab once remarked that he made it a rule to do business only with lucky men, by which he meant with men who had demonstrated their capacity in a series of situations. It is a good rule. If you follow, in your investments, the men who have succeeded, you are likely also to succeed, assuming always, of course, that the industries with which they are engaged satisfy fundamental human needs.

"I DO not mean to say that a man can make his investment in any enterprise, however good and ably managed, and then go to sleep. Business is never static; it is forever moving, forever subject to the fluctuating influences of scientific discovery and consumer demand. These changes, which seem sometimes to come very suddenly, are not usually so sudden. They cast their shadows before them, and he who keeps his eyes open may see and be warned in time.

"If you pick the ten leading industries in the United States, excluding for the moment the railroads, which operate only at home, you will find that every one of them is set up to do business all over the world and that their foreign business has extended rapidly in the past few years. You will find that every one of them maintains scientific research on a broad scale, which is insurance that it will not be left behind by scientific progress, and will have the benefit of whatever new processes and products such research may develop. You will find that every one of them is headed by men of demonstrated success, who have surrounded themselves with capable assistants, trained to carry on.

"There is no mystery in these criteria of probable industrial progress. Economic and industrial news is available to everybody everywhere. The conclusions to be derived from it are simply applications of common sense. In broad and general terms progress is on the march. The economic condition of the world seems on the verge of a great forward movement. As to particular companies, and even as to particular industries, some are in phases

Are Your Opportunities Slipping By?

THE years roll by faster and faster seemingly. More and more frequently come those moments when we regret the opportunities we allowed to slip by. When we realize that we have made little or no progress; that we have acquired no new mental equipment, and no increased capacity for business or social life.

You must *do* something if you expect to accomplish anything worthwhile. But you will need perseverance and study.

Columbia University, as one of the world's leading educational institutions, urges you to use part of your time in study. Not solely for the attainment of greater efficiency in business, but for a fuller social life, and for the real joy of having a more intelligent point of view. Whatever your objectives may be, and wherever you live, splendid studies that lead to these objectives are available through Columbia Home Study Department. The range of subjects is wide.

COLUMBIA UNIVERSITY

Offers Home Study Courses of University Grade in the Following Subjects:

Accounting

IN this country we are in the midst of an adult education movement. University home study courses are one of the important factors in this progressive movement, for they offer expert guidance under educators qualified to direct.

Our courses have been prepared by our instructors to meet the special requirements of study at home. While all basic material essential to the full understanding of each subject is fully covered, sufficient elasticity is allowed to permit adaptation to the individual needs of the student. Everyone who enrolls for a Columbia course is personally taught by a member of the University teaching staff. Special arrangements can be made for group study.

The University will send on request full information about these home study courses. A coupon is printed below for your convenience. If you care to write a letter briefly outlining your educational interests our instructors may be able to offer helpful suggestions. Mention subjects which are of interest to you, even if they are not listed here, because additions to the courses offered are made from time to time.

HIGH SCHOOL AND COLLEGE PREPARATORY COURSES

COLUMBIA University Home Study Department has prepared courses covering the equivalent of four years of High School study. This complete High School or College Preparatory training is available to those who can not undertake class room work. We shall be glad to send you our special bulletin upon request.

COLUMBIA UNIVERSITY, University Extension—Home Study Department, New York, N. Y.

Please send me full information about Columbia University Home Study Courses. I am interested in the following subject: Amer. Mag. 6-29

of ascendancy, some few are retrograding. The wise investor will seek the former and avoid the latter. Having satisfied himself that he is in a fruitful field, he will seek to learn something about the companies he favors—the field of their particular endeavor, the men who are responsible for them, the policy of their operations. In the long run he cannot go far wrong if he relies on progress—not already too far anticipated—if he relies on what I have called 'the industrial renaissance.' As an old friend used to say to me as a youngster, 'How many bears do you know with residences on Fifth Avenue?' I can recall none.

"Of course, there is no royal road. Bob Fitzsimmons used to say that to be a champion a man must learn to take as well as give. This has always been in my thoughts when I have seen men under the punishment of life, and I may add that I know no champions anywhere who have not had their experience in taking it.

"There will, of course, be temporary setbacks due to causes perhaps more or less avoidable. Finance will be a limiting factor until that subject is better understood and worked out, but I am not speaking in terms of weeks or months when I say I think the great economic surge is forward.

"Also, in a large politico-economic unit such as the United States, the powers of government are so vast that if they be unwisely applied, they can hamper or even destroy a natural period of prosperity.

"Mr. Hoover clearly pointed out in his campaign speeches that we have pushed efficiency in machine production to a point where, in order to keep our people gainfully employed, we must continue to produce in ever increasing amount an industrial surplus beyond the capacity of our domestic market to absorb. In other words, our industrial prosperity depends on a rapidly expanding export trade. Industry is fast approaching the dependence on export markets that has given agriculture such distress. I cannot avoid some apprehension over the recent demands in Washington for tariffs amounting to embargoes on the importation of everything. Tariff protection is a complicated and highly technical subject. This much is clear. A prohibitive tariff would inevitably force our best customers into defensive tariff agreements. For example, I cannot conceive of the Argentine and Canada taking no steps to retaliate on any attempt to exclude their exports to us. They would raise walls against us, and the hands of our progress in those fields could be set back years in a week. Similarly for all American republics and France, England, and Germany. They would create mutual relations among themselves to the restriction of our export market, and we we could not fail to suffer loss.

"Such a result I do not fear because I know Mr. Hoover to be too sound in his economics and too keenly aware of our necessity in this regard to permit such a thing despite the clamoring with which he is already assailed. He will use the protective principles to preserve the markets which are rightly ours and, I trust, to relieve agriculture in that very limited field where protection will be of benefit.

"Yes," I said, "you have just said that the ability to take punishment is one of the essentials."

"The really essential attributes may sound trite," Mr. Baruch replied, "but, to my way of thinking, they are courage, integrity, and application. When a man has made up his mind to believe in the country and its industries, and to go forward with them, he must be willing to take the temporary setbacks along with the progress. He must keep his faith firm, and not let any little thing unsettle his decision. As for integrity, what can any man add to what has already been said?"

Baruch was thoughtfully regarding a picture of his father, Dr. Simon Baruch, the distinguished surgeon and scientist, whose services and research have left a permanent impress on medical knowledge and practice. The photograph was inscribed to his son, with the words, "Let unswerving integrity always be your guide."

I looked at the picture and put it back on the desk.

It has been said that there is no sentiment in business. Some day I shall write a piece about fathers and mothers—the fathers and mothers of these well-known men in Wall Street. But, as Mr. Kipling would say, that will be another story.

Travel Trails Announcement and May Solutions

How to Follow a Travel Trail:

EACH word must have exactly the same number of letters as the spaces allotted, and each word must have three consecutive letters that travel straight down (or up) through the same three letters in the word below (or above); and the word before the destination must also have three consecutive letters that travel into the same three letters of the destination; as illustrated by this sample trail solved for you:

The clue sentence for each trail contains a few of the words which can be used as legs of the journey. Take as many words from the clue sentence as possible. Otherwise, use any word from a standard dictionary. Proper names are not allowed in solving a trail, unless included in its clue sentence. Solutions of the trails on pages 34 and 35 will be published in next month's issue of THE AMERICAN MAGAZINE.

PRIZES: THE AMERICAN MAGAZINE offers a prize of ten dollars for every Travel Trail accepted for publication. Send the solution with your trail. Art work not essential. A Travel Trail, to be eligible for the contest, must not be longer than twenty words, including the starting point and destination. Also, it must have the home-town of the contestant as its starting point or destination.

Other suggestions are: Keep all cities and towns of your Travel Trail in the relative positions they occupy on a map. Clue sentence, if included, should carry interesting local facts and contain a few of the words required for traveling the trail.

Strive for an interesting, trail-like design. Limit the letters overlapping between any two words to a number as little in excess of three as possible. This helps to make your trail admit of only one solution. As far as you can, use well-known words. You can make your trail sufficiently difficult by traveling from one word to another through unusual three-letter combinations.

Contestants are not limited in number of trails submitted. Next month another group of winning home-town trails will be published. Send in yours to "Travel Trail" Editor, THE AMERICAN MAGAZINE, 250 Park Avenue, New York City. Manuscripts not accepted for publication will not be returned.

AFTER EVERY MEAL-FOR LIFE

We don't mean to imply that the bride's cooking requires a digestive aid—

But **WRIGLEY'S SPEARMINT** affords just that taste of mint we all like after meals.

And besides, it whitens teeth—sweetens breath—aids digestion and calms the nerves.

Freshens the mouth after smoking.

TASTE the Juice of Real Mint Leaves

Weather will *never* wear them out

On new houses or old, J-M Asbestos Shingles are everlasting

Ice and snow have no more effect on J-M Asbestos Shingles than on granite. Impervious to weather, unburnable by fire, they make a roof which everlastingly ends roofing expense.

The most intense tropical sunlight is merely pleasant warmth to J-M Asbestos Shingles, which are not harmed by white heat of a furnace.

Spring showers or summer thunder-storms serve only to brighten the charming colors of everlasting, fireproof J-M Asbestos Shingles.

EVERLASTING is a strong word. Yet you can truthfully call your roof everlasting if it is made of Johns-Manville Asbestos Shingles. To produce this roofing, unburnable asbestos and cement are blended under terrific pressure into monolithic stone shingles. No natural rock can be so free from splitting, so completely impervious to fire. These sturdy Asbestos Shingles have the further advantages of colors to meet every requirement, and absolute uniformity of quality in every shingle.

Consider what these points mean to you in protecting and beautifying your own home.

When you re-roof your present home with Johns-Manville Asbestos Shingles you re-roof for the last time. Or if you cover your new house with J-M Asbestos Shingles you will never have to buy another roof, nor make repairs.

J-M Roofs Improve with Age

The process of making J-M Asbestos Shingles is as if rock were produced to meet specifications. These Asbestos Shingles can be raised to white heat, then plunged into cold water, without harm. No other natural or manufactured roofing (except sheet metal) would stand such treatment.

In fact, the toughness of J-M Asbestos Shingles is such that the only effect of weather is to make them harder and stronger. It is literally true that the longer J-M Asbestos Shingles are exposed to the weather, the less the weather can injure them. Actual tests show that the portions of J-M Asbestos Shingles exposed to the weather are stronger after 15 years of service than the portions which are covered.

Beauty plus Utility

Any home, from a tiny cottage to a great house, is improved by a roof of these colorful, rough-textured, sturdy Asbestos Shingles.

When you order a roof of our Shingles you receive from your contractor a certificate which attests to the genuineness of the roof. Ask for this. It protects you from disappointments due to substitution of inferior material. Johns-Manville Asbestos Shingles are everlasting.

The famous J-M trade mark also stands for quality on automobile brake lining as well as on packings, heat insulations, built-up roofings, flooring and numerous other products. By using Johns-Manville Asbestos Shingles your home receives the benefit of this same engineering skill.

The Great Tomorrow

By WALTER B. PITKIN

Professor of Journalism, Columbia University; Formerly Associate Editor of the Encyclopædia Britannica

MANKIND is just beginning to master the world. Every day we advance further than our ancestors did in a generation. Nobody can keep up with the progress all of us are making. Nor can anybody foresee the great design of the civilization that is now taking shape. But we can, perhaps, catch a glimpse or two that will make us realize, with a deep thrill, the coming of *The Age of Man.*

The Age of Man is Just Beginning

WE LIKE to fancy that man has been Lord of the Earth for, lo, these many thousand years. But scientists laugh at this conceit. It isn't true. We still live in the Age of Insects. Ask L. O. Howard, the great entomologist. He will show you proof enough that man hasn't even conquered a small sector along the world-wide battlefront. Insects were here millions of years before we came. They still run things. We have hardly halted a single species in its forays against the goods and chattels of mankind. Insects damage our houses, our food, and our health far more than the World War ever did. To beat them, we must spend as much as we now do for battleships. When we vanquish them, we shall acquire territories and wealth vastly greater than all that ever were gained by Alexander the Great, by Cæsar, by Napoleon, or by any other military genius. Above all, the tropics will then fall under the sway of man.

Sometime in the Great Tomorrow this will happen. Just now we are concentrating on our other deadly foe, the bacteria. And victory is in sight. The Microbe Hunters have the enemy on the run. Here is the latest news from the front:

Dr. George Kremse, a German engineer, has just invented a chemical that purifies water on a scale hitherto undreamed of. The University of Greifswald vouches for its potency. If you put only one and a half grams of it in 2,500,000,000 gallons of water, it completely disinfects the water for years. Quite a lot of water, that! It's a lake a mile long, some 2,000 feet wide, and about 35 feet deep all over!

Good-bye, typhoid! Good-bye, all other water-borne diseases! Now, who will deal insects a dirty wallop like this?

Drop in at the Inn of Neptune!

BEFORE long you will be stopping off at the Inn of Neptune for tea. Maybe you'll go in your hydroplane, and maybe you'll just trail along in your glider. They're building the first Inn of Neptune now. It will be located at the corner of Gulf Stream Boulevard and Bermuda Lane, about 300 miles southeast of New York City. A commodious hostelry, this! No less than 1,200 feet long and 400 feet wide and 100 feet above the ever-lapping waves. It is the first of the Armstrong Seadromes which will serve as midway landing places for airplanes between New York and Bermuda. There will be a first-class hotel, a fine restaurant, and a big garage for airplane repair work, as well as huge fuel tanks for thirsty motors.

Long before the Great Tomorrow arrives, the seas will be dotted with man-made islands, to make easy the air journey between the continents. The idea rings strange and wild, doesn't it? Some editorial writers fear the scheme will fail because it will be impossible to get crews to live on such remote and monotonous floats. How little they know of the human race! And how little of modern ways! Nowadays it isn't necessary to require anybody to live more than a few weeks at a stretch on such a place. Even the garage mechanics at the Inn of Neptune can hop up to Broadway for a gay week-end. For the uttermost parts of the earth are just around the corner.

Next we'll be hearing of jungledromes, set down in the midst of the Congo and the Amazon. And Saharadromes! . . . And Polardromes? . . Well! Why not?

Paper vs. the Man With the Hoe

THE Man with the Hoe is going. Downtrodden, overworked peasant, tiller of the stubborn soil, he will soon be displaced. And what do you suppose is going to send him the way of the dodo? A scrap of paper.

It is, to be sure, a rather big scrap of paper. For it covers the entire field where the Man with the Hoe used to toil. They call it mulch paper. But they ought to christen it the Paper of the Great Tomorrow, for it is almost as revolutionary as that other scrap of paper which we call the Printed Page.

A desperate pineapple grower in Hawaii hit upon the idea of fighting weeds and bugs by covering his fields with great rolls of heavy paper which, by cutting off sunlight and air from weed seeds, would prevent their growth. Holes are punched in the paper, through which the plants sprout. The results were miraculous. Crops were doubled and even trebled. All work of cultivating ceased. Nobody has to hoe the plants. For there are no weeds to be chopped down nor hard-baked soil to be pulverized. Covered with paper, the earth stays moist and soft.

Night Letter: Hankow to Pekin. Collect

DID you know that, while every other nation in the world has been using the telegraph for a generation, in all its business and social communications, the luckless Chinese haven't been able to wire even a New Year's greeting? And why not? Simply because Chinese is a picture-language, and you can't put it over into Morse code—nor into any other. But now, of a sudden, all is changed; and Asia moves ahead a generation over night!

The Radio Corporation of America has just arranged with the Chinese Government to transmit messages in the original Chinese characters by telephotography. You know how our newspapers now telegraph photographs, and how our banks send signatures over the wire? Well, that is how friend John Chinaman will be shooting night-letters to his agent in Hankow commanding him to buy eight bales of hog bristles and two tons of chop-suey chemicals.

Conservative business men predict that the entire trade and politics of China will be revolutionized by this American invention within a few years.

The Same Qualities That Serve Hunter in Sport Serve Him in Business

(*Continued from page 47*)

knowledge that he was storing up was to prove a valuable thing; it was to pay big dividends in cash during later years.

In 1925 an old friend of his boyhood, T. Harold Forbes, of New Rochelle, New York, came to him for help. Forbes's father had left him a suburban newspaper, the New Rochelle Star, and young Forbes felt it could be modernized and made a big, paying proposition. He knew Frank, knew Frank's record with his West Virginia sheet, and he asked his friend to come north and look the situation over. What Hunter visualized dazzled them both.

"Not one paper, not one small-town newspaper, but a chain," said Frank. "Well, why not? No one has ever applied the idea to the suburban daily."

"Yes," said Harold Forbes sarcastically, "and it would take about a half a million dollars to buy up the papers in this vicinity."

"A million," said Hunter to his future partner, "and I'm going out to get it!"

Bulldog Hunter went out for his million, and got it. He applied to the same men in the same banks he had known and done business with while with the shipping concern. Perhaps bankers are better judges of character than they pretend to be. At any rate, with that million in his pocket Frank Hunter went back to Harold Forbes.

"All right, Frank," said Forbes, "let's go." And off they went.

Drug-store cowboys and barber-shop politicians that infest every town sat back and roared. Who ever heard of a tennis player running a newspaper?

MEANWHILE Hunter and Forbes said nothing. They first bought the Mount Vernon, New York, Argus, for which, by the way, they wouldn't take a million right now. Then they acquired the Mamaroneck Times, and then a group which included the Harrison Citizen-Observer, the Larchmont Times, the Dobbs Ferry Register, the North Westchester Times of Mount Kisco, and the Pleasantville Journal; and they founded the Newcastle Tribune. No wonder the local antiquarians standing on street corners laughed. For some of those newspapers were dead, some were dying. And, of all towns in the United States, those represented by these papers are probably the most difficult in which to establish a small, local sheet. The inhabitants are mostly commuters going to New York every day. Each morning they have thrown at their doors a big city daily. And unconsciously they compare it with their local rag.

Hunter and Forbes realized the handicaps they were up against. But they said nothing and went to work. For several months they studied each property they had purchased before making any changes. Then one morning they revamped the entire make-up, washed out all the advertisements from the front page, put in new cuts, and set it up in new type. They went ahead and modernized old-fashioned plants, they built new buildings—all as fast as possible. They put each paper on a strictly cash basis. Modern bookkeeping and cost-accounting methods were introduced in order to watch expenses. Economies of all sorts were effected, made possible because supplies were purchased in large quantities for eleven papers instead of for one. They had their advertising for the entire group set up in one plant.

"Organization," says Frank Hunter; "that's the secret of the newspaper business the same as any other business."

YES, they organized, but they also worked, slaved, put time, brains, energy, initiative, into the thing. At first circulation fell off. Then gradually it picked up. People saw these two boys meant business, that they were putting out local papers dealing with local events and not attempting to compete with the big city dailies in world affairs. Circulation increased. The drug-store cowboys and the barber-shop politicians were the first ones to point out that they had predicted this all along.

Recently Hunter and Forbes merged with the Macy newspaper chain, consisting of the Yonkers Statesman, the Portchester Daily Item, the Tarrytown Daily News, and the Ossining Citizen-Sentinel, and they launched a new paper in White Plains called the Daily Press. Today Frank is president and Forbes is vice president of the Westchester Newspaper Securities Corporation. They own the most profitable chain of suburban newspapers, as far as I know, in the United States.

Right here you are going to stop me. "All this stuff you've been feeding us is very interesting," you'll say, "and this bird Hunter must be a smart guy. But I can't see anything in his career that affects *me* personally. What he did and how he did it doesn't matter to me."

Wait just a minute. Maybe it does hit you, after all.

You may never, it is true, need to borrow a million from the bank; but last month you went in to borrow a hundred, didn't you? The principle is precisely the same. Your credit may be worth less than his; but you had to stake it up against that loan just as he staked his credit and his judgment. Analyze the things that have made Frank Hunter's name mean victory in sport or in business, and you will find that they are qualities that we all know about and that everyone can cultivate—nothing hidden, rare, or abstruse about them, just the simple, old-fashioned things that affect us all.

First, then, Frank Hunter *concentrates* on whatever he happens to be doing. Frank isn't a great natural tennis player, for instance. He will tell you this himself. Ask him how, with a mediocre game, with no natural aptitude for the sport, with a slow-moving, heavy frame, he has worked to the top in a game that demands rapidity of movement, quickness, agility, and he'll reply:

Digitized by Google
Original from UNIVERSITY OF IOWA

"Concentration. That's the secret of my tennis. What does concentration mean? It simply means being oblivious to outside influences of all sorts when you are in competition."

When Hunter is out on the court, he's not thinking about some party he is going to that evening, or how he is to meet the loan due next morning, or of who happens to be up there in the stands. No, sir! He's thinking of nothing but the point he is playing. His eye and his mind converge on one thing. And before long, by this fixity of purpose, he has weakened, battered down, overcome, the resistance of his opponent, and another player is walking off the court shaking his head and muttering to himself that he can't for the life of him see how such a clumsy player as Frank Hunter, whose only decent shot is his forehand drive, can win!

Concentration, that's a part of the secret of his success in the world of sport and the world of business. But there's more to Hunter than concentration. Hunter is a *fighter*.

"To get anywhere in sport you have to fight, and you must have an incentive to make you fight," he says. Perhaps that is why he is such a wonderful match player. It was interesting to watch him in the last national tournament as he mowed down first one player and then another, to notice how he was invariably at his best when most necessary in each match. His fighting spirit sensed the vital points, he went for them and won them. In other words, he was able to pull off his best shots at crucial moments. One adversary was bothered by the wind; Frank was too busy fighting to be bothered by it. Another man was annoyed by the applause of the gallery; Frank was so occupied fighting for the point that he never heard the applause. And so it went. Ask him whether he likes to play a practice or a tournament match best and watch his eyes light up:

"COMPETITION. I love it. Why? I don't know, you get more out of it. There's more—more stimulation to it."

Hunter had to fight to get cargoes for the steamship company; he had to fight to get the money to run his chain of newspapers. And it has been a fight ever since to bring them to life and keep them alive in a business way. In fact, his whole life is a fight—a fight to grab time from his work to get a few hours to devote to the sport he loves.

Last fall, during the National Singles Championships, in which he distinguished himself by defeating, first, a former American title-holder, then Borotra, of the French team, next Crawford, the best of the Australians, and finally Lott, the best young American, he was at his desk in his office in New Rochelle until one o'clock each day. The afternoon he played Jean Borotra he was working until two and took the court at four to the dot. Where most players would quit the game, would say they couldn't spare time from their business, would simply chuck it all, Frank Hunter finds merely another obstacle to overcome, and fights his way through. Of all the hundreds of thousands of players in this country, no one has to make the sacrifice for the game that he does, no one works harder to get his sport.

Another quality possessed by Frank

"Just notice the fine skins of men who use WILLIAMS!"

Not Just *Soap in a Tube!*

It's cream. It's real Shaving Cream. *It's not just soap in a tube!*

It's the product of 89 years of specialized study of how best to soften the beard; how best to take care of the skin.

It's cunningly blended from ingredients carefully chosen for what they *won't* do, as well as for what they *will* do; and scrupulously pure.

It's ultra mild. Billions of pores of millions of skins would tell you so if they could talk.

It's quick to make a lather; and the lather it makes holds 10% more moisture, by authentic test, than any other we know of.

It's gentle in cleansing pores,—gentle but thorough; freshening to facial tissue. Gives a shave that's pleasant, quick and close.

Let no man think his shaving experience is complete until he has tried a tube of Williams.

The drug clerk speaking: "Oh, yes, sometimes they change. . . . *but they all come back to Williams!*"

THE J. B. WILLIAMS COMPANY, GLASTONBURY, CONN.—MONTREAL, CANADA.

Next time say

"Williams Shaving Cream *please!"*

Then a dash of Aqua Velva. Scientifically blended to give proper care to the newly shaven skin.

DIANA "Stuft" CONFECTIONS

Bunte WORLD FAMOUS CANDIES

FOR Bridge or Lawn Party . . . at every summertime social occasion serve these *thin . . . crispy . . . sugar shells . . . "Stuft" . . . with luscious . . . fruit jams . . . nuts . . . and marmalades.* These luscious tidbits were originated by Bunte Brothers. Every pound contains 160 pieces—21 different varieties. Packed in one pound jars and 2, 3 and 5 pound tins.

If your dealer does not carry the genuine, we will supply you. Send 75c for the one pound glass jar. We will mail it postpaid.

BUNTE BROTHERS
3339 Franklin Blvd. · *Est. 1876* · CHICAGO
Makers of the famous Mi Choice chocolates

The original "Stuft" confections—often imitated but never equalled

Hunter to a considerable degree is *confidence*. He thinks he's good and then he goes out on the court to prove it to himself.

"I believe that confidence, when correctly applied, is one of the greatest assets in life," he says. "Let me explain. Last summer, after winning the Dutch championships, I began to think I knew something about the game of tennis. I went across to Wimbledon, met young Andrews, of New Zealand, in the very first round, had match point called against me, pulled it out, reached match point myself, expected to win it, didn't, and finally lost in five long sets. That was confidence wrongly applied. In fact, it was overconfidence. I underestimated my opponent and didn't give everything I had."

This was one of the rare times, probably the only time, that Frank Hunter ever came so close to winning and lost. His confidence is the confidence of courage, the confidence of a man who is ready and willing to fight.

CONCENTRATION, fight, confidence! Add another quality to these and you'll know Frank Hunter even better. That quality is *loyalty*. His loyalty to Bill Tilden is common knowledge; when Tilden was disqualified last summer, Hunter at once handed in his resignation as a member of the Davis Cup team. He stuck with Bill.

One more thing that has made him a figure in the business world today is the fact that he is a small-town boy who has stayed in a small town. To be sure, he has roved and ranged over the world, he has learned by knocking around that other lands and other peoples have many things worth copying. But when the time came he was able to return to his own home town and find opportunity waiting for him on Main Street.

Now, if all this makes Frank Hunter seem a dull and stolid person, the fault is mine and not his. A more entertaining companion at dinner, a more amusing person with whom to travel across the ocean, it would be hard to find. He has ideas on everything, can express them logically and clearly, and tops this off with a rare sense of humor, something worth many tennis championships, and many millions, too.

So far as I am aware, Francis T. Hunter is one of the very few leading American tennis stars who have any business but the business of tennis. When the short tournament season which he is able to play is over, he drops out of the limelight and out of the newspaper headlines. You do not hear of him, for instance, taking part in exhibition matches in Dallas, Texas, and then next week in Los Angeles, California, and the week after that in Atlanta, Georgia. Why? Because he is sitting at his desk in his office in New Rochelle working nights to make up for time lost during the summer. In short, he does not accommodate his entire life to sport; he plays when he can and pays his own way wherever he goes, preferring to earn a livelihood in business rather than to perform in any one of the mysterious and manifold ways by which it is possible for an amateur to make a living in sport and still remain an amateur sportsman.

Dead Man's Shoes

(*Continued from page 33*)

ircumstance about this journey of my ·other is gone into: The inquiries that e made about the markets at Fort Pitt; ie money he withdrew from the bank; s conversation with the people; his in- ntions to take the Empress of Atlanta. is all sifted, for some suspicion to fasten ere on me. And, for all this hostile en- eavor, do the authorities find a single cident that can be twisted into any form gainst me? Do they find anything in any rection that does not tend to establish recisely what I have said about it?"

"They do not," replied the lawyer.

"Then," cried Brant, "why do you me here with this little moral lecture, iese indirections, these vague, veiled nuendoes? What have I done to bring ou here?"

Colonel Braxton looked up at the man. is voice, when he spoke, drawled as in an le leisure.

"It is something your brother did," he id.

"My brother!" echoed Brant. "What d my brother do?"

HE PUT his shoes on wrong," replied Colonel Braxton.

Benedict Brant went over to the fire. e took up the poker and moved the logs. shower of sparks went up, and for a oment the flames roared in the chimney. hen finally he spoke.

"His shoes on wrong!" he said.

"Yes," continued the lawyer. "He ade that mistake, after all the years of utine . . . and so it proves that, for all ur care, any one of us may make an error hen we believe no error possible. It is ue that the big cowhide shoes that your rother wore were not very carefully aped by the cobbler who made them for m. They were not shaped enough to be ticed by those who found his body. But marked the error when they took him rowned from the tree top in the river, nd when they removed his clothing for e examination by the surgeons."

Colonel Braxton did not look at the an fumbling with the fire. He drummed ly on the table with his fingers, and oke as to himself:

"It was a strange mistake to make . . . put one's shoes on wrong . . . to put e's shoes on wrong on the day of one's eath! Your brother Maynard had been tting his shoes on correctly for some xty years . . . and yet, on the day of s death, he put his shoes on wrong . . . s left shoe on his right foot!"

RANT did not reply. He put up his hand and fiddled his fingers against his outh. His face fell into a deep reflection. here was silence. The pale moonlight en- red the window and extended itself on e floor. The candles on the table, half rned down, added to the light. The gs in the fireplace smoldered and the ill of the night crept in. Finally the an came to his decision. He turned, and s face cleared of its anxiety.

"Colonel," he said, with a genial air, ve get nowhere with these indirections. t us sit down at the table and talk the

NOW EVERY HOME MAY HAVE GOOD REFRIGERATION!

matter out, frankly between ourselves. But first let me ask you a simple question: Did anyone but yourself notice the mistake my brother made when he put on his shoes?"

Colonel Braxton replied at once, and with an equal frankness.

"No," he said; "I alone observed it."

"Have you spoken of it to any other man?"

"No."

"Then," Brant said, "let us talk it all plainly out."

He turned toward a cupboard in the wall, opened the door to it, and got out a bottle of whisky, some glasses, and a loaf of bread, and set them on the table.

"It is not much that I can offer you," he said; "but it is something."

He poured out a glass of whisky for the lawyer and one for himself.

Colonel Braxton sat down in his chair before the table and took up the glass. Brant, however, did not at once sit down. He paused, his attention drawn to the hearth where the dog lay on the warm bricks.

"The fire is low," he said; "I will bring in a log," and he went out.

AND immediately the lawyer did a curious thing. He broke a fragment from the loaf of bread and dipped it into his glass of whisky and, rising, crossed swiftly to the fireplace. . . .

A little later Brant came in with the log for the fire. He glanced at the table and the lawyer, put on the log, and stirred the fire into a blaze.

And immediately, as if it were at a signal, Colonel Braxton did another inexplicable thing. He sprang up and went over to the window. The act was swift and unexpected. He cried out, staring through the panes of glass at the white field.

"What is that?" he exclaimed. "What is that?"

Benedict Brant crossed to the window swiftly, nimbly, softly, like a cat. There was no rheumatic disability in that knee. In an instant he was beside the lawyer.

"What do you see?" he said.

Colonel Braxton stepped back. He passed his hand over his face. He seemed in a manner to relax.

"It was a shadow," he replied. "I thought I saw a shadow on the snow."

"What sort of shadow?"

"A shadow of the gallows!" said Colonel Braxton.

BENEDICT BRANT turned. His hands clenched, his shoulders were thrown tensely forward.

But the lawyer was not there. He was stooping over, midway of the room, looking at the footprints that Brant had made when he crossed from the fire, for the wood ashes of the hearth remained on his shoes.

"Yes," he repeated, "the shadow of the gallows, Brant. . . . The length of your step here on the floor is exactly the length of your brother's step out yonder on the field. You did this precisely as I suspected: Killed your brother here, removed his shoes, put them on over your own, carried the body across the field to the river, restored the shoes to your brother's feet, threw him into the water, loosed and overturned the skiff—and returned here.

Digitized by Google Original from UNIVERSITY OF IOWA

ollowing the road along the river until it ame into the highway, and so left no rack of your own in the snow. . . ."

The man at the window did not move. His face was like a cast in metal. And when he spoke his voice was like the sound of metal: There was deliberation, and a deadly menace in it.

"And so," he said, "you have found all his out. Have you found out, also, how I killed my brother?"

"I am not yet certain," replied Colonel Braxton.

"Do not despair," said Brant. "You will be certain in the next two or three minutes."

Colonel Braxton pointed toward the fireplace.

"Perhaps I can be certain now," he said. "The dog sleeps well!"

Brant crossed the room with long strides, and touched the dog with his foot. It did not move.

"It sleeps well!" repeated Colonel Braxton. "I tossed it a bit of bread, soaked in the liquid in my glass, and I poured the remainder into the ashes. . . . No, Brant"—and his big voice filled the room—"you shall not kill me with your poisoned liquor as you killed your brother Maynard!"

A sudden, violent, and ungovernable fury seemed to fall on the man standing at the hearth.

"Then I will kill you with this iron!" he cried, and he seized the heavy poker out of the fireplace.

But a voice stopped him.

Mr. Dabney Mason was now standing in the doorway, a dueling pistol in his hand—the long barrel and the extended arm behind it were as rigid and unmoving as a rod of steel fastened in a vise.

THE murderous creature went to pieces; and, on his own confession, in due time, he was hanged. . . . But on this night of memorable adventure, returning in the carriage to the city, Mr. Dabney Mason expressed his wonder at the acumen of the lawyer in this affair.

"Colonel," he said, "how did it happen that you alone, of all the persons who examined the body of the dead man when he was brought in from the river, noticed that the shoes were on wrong?"

Colonel Braxton laughed.

"They were not on wrong," he said. "That was a pious fraud, Dabney. I made it up to stampede old Benedict's conscience, and he accepted it as a mistake he might have made, in his hurry in the night, when he replaced the shoes on his murdered brother's feet."

"HELEN," said Mark Twain to Miss Keller, "I like you because you don't talk all the time!" And Helen Keller liked Mark Twain because he did talk all the time. A beautiful friendship existed between these two—the great humorist and the great deaf and blind woman. Perhaps the creator of Huck Finn revealed himself to Miss Keller as to no other person. Anyway, you will find her next article one of the greatest characterizations of Mark Twain ever printed. In this article she tells you, next month, of her visit to the Twain home, of the talks they had, of the boundlessness of his emotions.

This investment service saves time and worry even in your absence

Business has a long arm these days. Not even in mid-ocean is a busy man free from its clamor for his attention. Because of these constantly increasing demands for your time you seek new ways of saving moments here and there. In making your investments, for example, there are hours to be saved if you are still selecting securities by a personal study of investment markets.

Most busy men nowadays rely on one or two nationally-known investment houses to give them investment advice. The National City Company makes a specialty of this time-and-worry-saving service to investors by maintaining branch offices in 50 American cities. Just telephone the nearest office—one of our investment advisors will gladly help you select new issues from widely diversified lists of carefully investigated securities. Abroad you will find the same service.

Why I Rebelled Against My Wife

(Continued from page 49)

understand. How many times have you set your heart on a certain objective, and schemed and worried to attain it, without result, only to be surprised by achieving it as a by-product of just sticking to the job? It was so with me in this instance.

The letters I wrote to New York brought no replies. An advertisement which I inserted in a trade paper returned three letters from insurance men and two from bond houses, and nothing else. But one day, out of a clear sky, I received a letter from a New York man of whom I had never even heard. Tracing it back later, I found that he was a cousin of a jobber in Cleveland who happened to be in a store in Sandusky when I was there making a sale. The jobber had formed a good impression of me and had written to his cousin. So I got to an office on Broadway via a country store in Sandusky.

I SHALL pass over the next years, which were merely a repetition of the experience of thousands of other men who came to the big city from smaller places. I worked hard, and my wife and I saved money. There came an opportunity to buy a small interest in the business, and this was afterwards increased. We moved from a little apartment in the Greenwich Village sect on to a larger one on Riverside Drive, and then to a finer one on Park Avenue. You can picture me at the age of forty about as follows:

A man nearly six feet tall, well tailored, and seemingly in first-class health. Hair beginning to gray about the temples and a trifle thin on top. A member of three city clubs and two golf clubs. A son and a daughter, both attending expensive private schools. A wife who had kept her health and figure, and who, being relieved of most of the obligations of home-making and child-raising through the employment of competent servants, had plenty of time for clubs, afternoon parties, and bridge.

This is a picture of perfect happiness, isn't it? What more could any human being want? Comfortable home. Beautiful wife. Healthy children. Congenial business. Plenty of income. Surely the gods are seldom kinder to anybody than they were to me.

For five years we reveled in the stimulus and excitement of New York life. I made friends in business, and my wife made others at her bridge club, and we were constantly entertaining and being entertained. I became a member of the Bankers' Club. It was quite a thrill at first to sit at a table near the window and see the top-notchers in American business and finance come in and eat their crackers and milk. Later, as I climbed up a bit in my own business, I began to meet some of these men, and I discovered, with a tinge of disappointment, that they are really no different from the rest of us.

However, it was thrilling to be so near them. I was, as my wife had predicted, a member of the big league. And if I was not yet a very important member, still, some of the stars were beginning to notice

Digitized by Google Original from UNIVERSITY OF IOWA

. I was on my way to a real New York cess.

f sometimes I felt a little restive and ndered if the game was worth the ıdle, she reminded me crisply not to be lish. "You're on your way to the top," said. "You can't expect to get all the d things of the world without working them. And that means paying the ce. We've got to hold up our end. Peo- won't invite us to their homes unless entertain equally well at our own. And ı know perfectly well that some of ır most valuable acquaintanceships ve been made at dinner in the evening."

t was all true, in a way; and after such alk I'd kiss her and tell her that she was best little wife in the world. I felt y grateful to her in those years. She l lifted me out of the rut of mediocrity l forced me to make something of my-. Where should I have been without ambition and courage?

n this mood of general self-satisfaction, ugh tinged occasionally with doubt as what it was all about and where it was ding, I passed the years between forty l forty-five. And then, when things med outwardly more favorable than r, when my income was the largest it l ever been, when I was beginning to be ognized as one of the "coming" men vntown, when I ought to have been remely happy, I underwent a curious itual rebellion.

Vithout realizing it I had become in- asingly tired. Suddenly, the fruit of cess seemed to turn to ashes in my uth. I found myself one morning sit- at my desk hating the office, hating iness, and thinking about the days in father's store in that little country n.

ND all of a sudden I felt I couldn't stand it any longer. Seizing my hat, I l my secretary to cancel all my ap- ıtments for the day. She looked up in prise, reminding me of certain very im- tant conferences which were scheduled the afternoon. "Tell them I am away, you don't know where I have gone," id.

or the next few hours I wandered aim- ly about the town, hardly conscious of surroundings. Along about two ock, feeling hungry, I dropped into a k-around restaurant and ate my kers and milk. (Yes, I had finally hed the crackers-and-milk class.) oss from the restaurant was a little . I went over and sat down on the ch. The seat at the other end was oc- ied by a husky-looking middle-aged ı of the day-laborer type, who was ling the sporting page of a newspaper apparently enjoying himself im- sely. He asked me if I had been to ball games lately, and I told him I n't had time.

Time!" he bellowed. "Every guy has same amount of time. You got as y hours a day as I have, ain't you? 'll be dead just as long as me, won't If you like ball games, why don't go to 'em? Why don't you do the gs you like to do?"

didn't say anything. I didn't know to say. There he sat, smoking his and reading his newspaper—a man y own age, with an income probably more than five per cent of mine; and

Those Who Dance..

MUST pay the piper—and all who suffer the misery of dancing in new or tight shoes know it.

But why suffer such misery? If you shake into your shoes some Allen's Foot-Ease you can dance all night in comfort.

This antiseptic, healing powder for the feet takes the friction from the shoes, soothes hot, tired, aching, perspiring feet and makes walking or dancing a real joy. People who enjoy foot comfort are using Allen's Foot-Ease daily. Try it.

Sold at all Drug and Toilet Goods counters. For *Free* trial package and a Foot-Ease Walking Doll address Allen's Foot-Ease, LeRoy, New York.

Allen's Foot-Ease

AT ALL DRUGGISTS

he had time to sit in the sunshine, to read, and to do the things he liked to do.

For a long time I sat there pondering. This was success. I had set out to get it, or rather my wife had set out to make me get it, and we had won. And what had it profited me? I took out some paper from my pocket and began to make notes. Expanded a little, to be intelligible to the reader, they were something like this:

OVERHEAD: When my income was $10,000 a year I saved $6,000. When it was $15,000 a year I saved $9,000. These savings made it possible for me to buy the stock that was the beginning of my financial independence. (Independence. What a word! How much independence could I claim?) We were very happy in those days of lesser income. We felt positively rich. We were healthy. My wife did a good part of the work of raising the children. I had time to play with them in the evenings and on Saturday afternoons and Sundays. We had all the satisfaction of people who were doing good work in the world, enjoying their children, and lending a hand to less fortunate folks along the way.

What is my present situation? My income is bigger than I ever thought it would be. I carry heavy insurance, but except for that I am saving nothing. On the contrary, we are continuously in debt. We owe our butcher and baker and candlestick maker. I keep my club bills paid up, because if I fall behind with them I shall be "posted" and the business world will begin to think I am slipping. We give practically nothing to churches or charities, or even to poor relations. Every dollar seems to be needed in three different places before it is actually in hand.

What is the answer? Why should we have felt so rich on ten thousand dollars and poor on several times that amount?

SOCIAL LIFE When we lived down in Greenwich Village and knew very few people, our social life consisted of an occasional evening out, the church, and a weekly bridge game with the Hendersons. Saturday night was our extravagant night. We went to the theater or the opera and sat in the balcony, and sometimes we took a taxicab home. We did not know any of the "best people," and we did not care. We were happy and healthy and thrifty.

Now, we know many of the best people. They are at our house for dinner or we are at their houses for dinner nearly every night. Looking back over last winter, what did we talk about at these dinners?

We talked about novels, divorces, trips to Europe, killings in the stock market. We drank and smoked and saw the same plays three and four times over, and played bridge, and went home to bed to toss around sleeplessly for hours.

This is social life. This is knowing the best people. For this we business men go out every evening, and are tired in our offices all day.

COUNTRY CLUBS: We belong to two country clubs. They cost us more than two thousand dollars a year. Our children do not go to church. Instead they drive out with us Sunday mornings to one of the clubs. As they are not allowed to play golf on Sunday morning, the course being reserved for tired business men, they hang around the club piazza all day. They meet the sons and daughters of people who are much richer than we are. This is a great "advantage."

I had no such advantages. I worked in my father's country store. My wife often looks back on those days and wonders how I stood it. She thinks it must have been a very meager life for a little boy. It was a wonderful life. I wouldn't trade all the members of the country clubs for the wise old fellows who used to sit in front of that country store.

Notes like these I made. After a while it grew dark, and I stirred myself, called a taxi, and went home. There was my dinner coat all laid out. My wife had not yet come home, the maid said. She had telephoned that the bridge game had delayed her, but she would be in time to dress for dinner. We were going to the Hillingtons'.

WE WENT to the Hillingtons'. But I said hardly anything to the other men, and they thought I was sick or all tired out. I managed to persuade my wife to leave a little early, and when we got home I asked her to put on a dressing gown and come down to the library. And we sat and talked through the rest of the night.

I need not report that conversation in detail. It was frank and intimate beyond any talk we had ever had, and punctuated with long periods of silence and with frequent outbursts of tears on Ethel's part. She could not understand at first why I was not perfectly satisfied. We had attained all the things that seemed to be most worth-while—social position, wealth, friends, invitations to the best homes, "advantages for our children." Patiently I explained that all this was empty and froth. The net result was that I was growing more and more tired, that we were saving less instead of more, and that I was ceasing to make active progress in my work, because so much of my energy was used up in useless social activity.

"But surely work is not everything," she demurred.

"Work is life," I answered. "A man is sent into the world to do a job, not to be a dinner companion. Here I am at the age when I ought to be most effective and I am becoming less effective every day, because I fritter away my strength in this futile routine in which we have entangled ourselves. You talk about advantages for our children. The best advantage any boy can have is a desire to do useful work in the world and the companionship of a good father. Our boy is growing up with no idea of work and with a father whom he sees only for a few minutes in the evening while he is changing his clothes for dinner."

Little by little she yielded, though it seemed to her that I was proposing to destroy the very foundations of our happiness. Finally came the direct question.

"What do you plan to do?" she asked.

"I plan to get a farm out in the country," I said, "and to establish you and the children there in all the comfort any family can reasonably desire. We can do that and live splendidly on half of what we are spending now. I shall be there with you and the children at least three days a week; the other four days I shall be in the office and shall sleep in a quiet room in town. Every other week you can come

down here with me, and see your friends. We shall go to the theater occasionally and to the opera, and to some good lectures.

"But your main job will be with the children during the few years that remain before they leave us to lead their own lives. I intend to be an active helper on that job. I am going to devote a definite part of my life to being a companion to my boy and girl. I am going to take them out of their swell preparatory schools and put them into the public schools of a country town. And I am going to see to it that each of them has regular work to do around the farm.

"We shall do some reading again, and we shall have some good daylight hours outdoors that will give us back our sense of joy in living."

THAT was the final result of our all-night talk. And the very next day we began to put the new plan into operation. There was much gossip among our friends to the effect that I had lost a lot of money and was compelled to economize. To all this we paid no attention, but went steadily forward about our own affairs. For the past five years we have been living on the new schedule. And with what result?

All the social strain and worry and expense has been banished. Our health is better. We live in comfort and have an almost unbelievably large amount of money to give away. The giving has put a new joy into our lives. We have assisted members of our family who are less fortunate than ourselves. We have found boys and girls in our country community whom we could help to an education. We have made ourselves a part of every good enterprise in the village. Our children have a wholly new point of view, based on saner living and friendship with the sound, wholesome folks of the world. And my business, which was beginning to be a strain and a bore, has taken on fresh interest because I myself am fresh and interested. The more superficial of our friends have dropped us, as they always drop anybody who falls behind in the competition of show and expense. But our real friends respect us more.

HERE are the six lessons which my experience has taught me:

1. No man is in a sound position when a socially ambitious wife is running his life. A woman helps a man most when she makes his home, raises his children to be a joy and not a worry, keeps him strong and enthusiastic about life. When she begins to scheme and plan his advancement, either in business or in "society," he degenerates very fast. A good woman makes her husband successful without trying. The more she tries consciously, the greater the failure in most instances.

2. The change in modern life has been so rapid that most of us have never really adapted ourselves to it. We are the sons and daughters of people who lived on farms, who had fresh air to breathe, quiet nights in which to sleep, and plenty of time to read and rest and think. And we are trying to live crowded together in great apartment houses, with little sunshine or fresh air, and with no time to stop and ask where we are going, or what it is all about.

3. I drifted into a typical New York

Story of 2 Men

One Went to College
One Did Not

BOTH MADE GOOD!

C. D. FISHBURN joined our sales staff after studying at Missouri University in 1921. "My first week I cleared over $100.00 and each succeeding week my earnings were high." In three years, he became manager of an important branch.

Each step up the ladder brought Fishburn added income. "I have bought my home as well as three other pieces of real estate, bought some company stock, a new Chrysler Sedan, built up cash savings and provided comforts and luxuries for my wife and daughter," he says.

A. ERICKSON, another successful salesman, writes: "My connection with the company has been the means of developing latent qualities which I had never before attempted to put into service. This is largely due to the way the executives of the company work with each man on the firing line. The last four years have brought me an increase of close to 400% in earning power. I know of no other organization that would have taken so much personal interest in helping me find myself and in aiding me to get ahead both financially and educationally."

STERNO CANNED HEAT

Licensed by U. S. Gov't for use only as fuel

...when you're looking for a new icing

HERE is an unusually tempting Mapleine icing which combines delightfully with raisin, spice and chocolate cakes.

1¾ c. granulated sugar
⅛ tsp. cream tartar
½ c. boiling water
2 egg whites
½ tsp. Mapleine

Boil sugar, cream tartar, and water till it spins a thread when dropped from tip of spoon (or 240 degrees F). Do not stir after mixture starts boiling. Pour syrup gradually over stiffly beaten egg whites, into which a pinch of salt has been added. Add the Mapleine, continue beating till mixture is thick enough to spread.

Alice Bradley's "Mapleine Cookery" sent free upon request.

For syrup...for flavoring

mode of living. It may be all right for some people. It was all wrong for me. I now live on a schedule planned particularly for myself, and without regard to convention: a life divided, half in the country and half in the city. It provides for only four days in the office instead of six, but I get far more work done in the office in four good days than I used to accomplish in six tired days.

4. The great idol to which the modern world bows down is "advantages for the children." The advantage of poverty and hard work, of contact with my fellow men in my father's country store, were greater assets to me than a legacy of half a million dollars. I hope to have the courage to give my boy the same advantages—hard work, simple living, and an affectionate interest in the men and women who have to fight hard for a place in the world. We waited almost too long. Another five years would have softened our boy and girl beyond hope. But, thank God, we made the move in time.

5. I believe we have to have a complete overhauling of the status and training of the modern girl. To me, her situation is pitiful. What has happened to her? Her job has been taken away. She is raised without responsibility, given an education which has no relation to her future activity, and, if she marries well, is condemned to be a workless and useless ornament in her husband's collection of possessions.

I believe in the old-fashioned training for girls, which included the dishpan as well as the music lesson, just as I believe in the old-fashioned training for boys, which included the stable and the garden. I believe the college course for women should be so shaped that when they graduate they would have some definite notion of what it means to be a wife and mother, of how hard it is to keep a man's love, and how infinitely hard to raise children to success. I would have them understand enough about business to take an intelligent interest in their husbands' affairs. But, most of all, I would try to develop in them an interest in books and art, and especially in other people, which would stand them in good stead if their husbands were successful and able to take from their shoulders most of the work of the home, leaving them with a lot of free time.

6. Finally, and this is partly repetition of what I have already said, but it is the crux of the whole thing: I believe that every husband and wife ought to provide definite periods for checking up, measuring progress against objectives, and making sure that the common life is headed toward a goal. The tragic thing in my experience was that I had to get into debt and come almost to the verge of a nervous breakdown before my wife and I had a real frank talk.

I Am Blind—Yet I See
I Am Deaf—Yet I Hear

(*Continued from page 44*)

under billows of pink and white blossoms."

My ears are dead, the birds are mute,
And still they sing;
It is within my heart they sing
As I pass by.

I think people do not usually realize what an extensive apparatus the sense of touch is. They are so likely to think it is confined to the finger tips. In reality, it reigns throughout the body, and the skin of every part, under the urge of necessity, becomes extraordinarily discriminating. It is approximately true to say that every particle of the skin is a feeler which touches and is touched, and gives contact which enables the mind to draw conclusions. All through my body I am keenly alive to changes and movements of the atmosphere, and I think the days vary for me as much as they do for anyone.

I am conscious of days when the air feels like a veil of gossamer softly dropped in a shower of silver mist. I am conscious of glad days when the sun brings a message of spring. I know great, shouting days that goad me into activity—days when the winds beat against me, challenging me to leap up and wrestle with them.

One of the liveliest of all nature's appeals to me is its infinite movement. Motion lights up the titan features of nature as stirrings of the spirit animate a face, and the wind is the soul of the earth. To me, it gives charm to the most glowing landscape and brightens up the most somber one. To me, motion is the beauty of the trees, the cornfields, and the sea. My fingers thrill as I feel the wind toss nature's "soft hair of grass" or shake its great rustling wings through a world of leaves. Viewless, changeful, unconfined, it is both an emblem of growth and of eternity, roving far over land and sea; it is to my touch what I imagine the horizon is to the eye. It brings me a sense of infinite space, of mystery, of sublimity. The wind symbolizes gladness, the urge and the aspiration with which the spirit of God keeps my inner life aglow.

The most satisfying sense of personal liberty I have ever had came when I felt myself to be a part of the wind. It was when I was in California working on the picture, "Deliverance," and flew in an airplane. The main difference I noticed in the atmosphere was the loss of odor as we climbed the aërial mountains higher and higher, past the flying dust, the ripening vineyards, and the pungent eucalyptus. As we raced with wind, I seemed to feel organ music and the sweep of ocean waves, winds from off mountains and illimitable plains. As the machine rose and fell, my brain throbbed with ecstatic thoughts that whirled on tiptoe, and I seemed to sense the Dance of the Gods.

Do not the dullest of us love water? Is it not to us what a friendly voice is to the ear? The sun beams upon us morning after morning, year after year, and we never tire of it. It is a delight to say, "The sun shines." It is quite as sweet to exclaim, as I have done a thousand times, "Here's the water!" This is one of the most good-natured things I know about the sun and water—they never cease to charm and soothe us.

Blindness makes me no exception. Perhaps it intensifies my affection for an element that seems wondrously akin to my spirit. Changeful, alive, unconfined, resolutely holding its way towards the freedom of the sea, water gives my aching sense its rest because it harmonizes with the aspiring soul within.

The waters everywhere afford rich, thrilling sensations to my touch. Walking along the margin of a lake, or climbing a steep hill, I have captured these touch images from a tiny trickle down a mossy boulder, a rill quivering like violin strings with tense music, a brawling creek, a tumbling cataract, from which I can just lift the spray veil, as it were, and a calm river, flowing, flowing forever.

The ocean does not, however, impart quite the same friendly emotions to me. Its vastness is sometimes oppressive with a cruel power. It is not the vastness of the sun's generous warmth, or the illimitable yet intimate touch of the atmosphere that surrounds me with a glad sense of nearness—as if I were a tree with its own home in the bosom of these elements. Perhaps, too, my continual experience with a sea of darkness and silence gives a peculiar tinge to my actual impressions of the ocean. Just as I breathe in the rippling beauty or the sunny quiet of a pond, so I want to fill my soul's lungs with the radiance of light in human eyes, not with the solemn atmosphere of blindness. I become weary of contemplating too long the stern power of the Atlantic, and on calm days I cannot help being conscious of how that ruthless Neptune keeps a placid face above unnumbered wrecks of ships and men—and this suggests a silence too suffocating for thought.

Still, I have my times of playful, defiant encounter with the ocean, when I sail on it or plunge into its billows. It is a keen satisfaction to me to step off the immovable land and feel the liquid world yield and sway under me. If there is a surf, my heart leaps up. The blood sings all over my body as I feel the waves fret and foam. It is a piquant sensation to have the seaweed lift and swing, the shells and pebbles tumble and rattle about my feet, and fancy that the next billow will carry me away from night, even as of old the flood bore Undine away from her faithless lover.

I FIRST visited Niagara when I was a little girl. I stood breathless beside Dr. Alexander Graham Bell on the Chasm's edge, its earth-shaking thunder vibrating through every atom of my body. A thousand lovely coquetries were drawing our souls within the great curve of peril whence billowy clouds of spray arose, wrapping us in a glittering spell. Niagara is nature displaying all her magnificence and cruel power. She is everything at once—awful, treacherous, lovely, gentle as a caress, wild as a tiger devouring its prey, hiding the abyss with rainbow wings. We spent hours exploring the rocks and watching the tumbling waters from different spots. We rode in the little Maid of the Mist, and I felt drowned in an ocean of sound—a million horses galloping round the world spouting spume from their nostrils! I had felt water in many wondrous forms—soft-descending masses of snow, ice imprisoning the streams, spring showers, and the ocean surge; but never had I dreamed that there could be such a commotion of waters!

STATEMENT of the ownership, management, circulation, etc., required by the act of Congress of August 24, 1912, of The American Magazine, published monthly at Springfield, Ohio, for April 1st, 1929. State of New York, County of New York—ss.: Before me, a notary public in and for the state and county aforesaid, personally appeared A. D. Mayo, who having been duly sworn according to law, deposes and says that he is the Business Manager of The American Magazine and that the following is, to the best of his knowledge and belief a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption required by the act of August 24, 1912, embodied in section 411, Postal Laws and Regulations, printed on the reverse of this form, to wit: 1. That the names and addresses of the publisher, editor, managing editor, and business manager are: Publisher, The Crowell Publishing Company, Springfield, Ohio; Editor, Merle Crowell, 250 Park Avenue, New York, N. Y.; Managing Editor, James C. Derieux, 250 Park Avenue, New York, N. Y.; Business Manager, A. D. Mayo, 250 Park Avenue, New York, N. Y. 2. That the owner is. (If owned by a corporation, its name and address must be stated and also immediately thereunder the names and addresses of stockholders owning or holding one per cent or more of total amount of stock. If not owned by a corporation, the names and addresses of the individual owners must be given. If owned by a firm, company, or other unincorporated concern, its name and address, as well as those of each individual member, must be given.) Bankers Trust Company, Trustee for Anna Wright Hazen New York, N. Y.; Bankers Trust Company, Trustee for Ella Gardner Hazen, New York, N. Y.; Bankers Trust Company, Trustee for Dorothy Hazen Soest, New York, N. Y.; Employees' Savings and Profit Sharing Pension Fund of The Crowell Publishing Company, New York, N. Y.; Gardner Hazen, New York, N. Y.; George H. Hazen, New York, N. Y.; The Holding Corporation of American Lithographic Company, New York, N. Y.; Gertrude B. Lane, New York, N. Y.; Anne Payne Maxwell, New York, N. Y.; Publication Securities Corporation, New York, N. Y.; Walter Roosevelt Thompson, New York, N. Y.; Samuel Untermeyer, New York, N. Y.; Flora E. Whiting, Josephine E. McFadden and Henry E. Schacko, as executors under the Last Will and Testament of Louis Ettlinger, Deceased, New York, N. Y.; Alanson H. R. Wilson, New York, N. Y. 3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of the total amount of bonds, mortgages or other securities are: None. 4. That the two paragraphs next above, giving the names of the owners, stockholders and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustee, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him. 5. That the average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the six months preceding the date shown above is——(This information is required from daily publications only.) A. D. Mayo, Business Manager. Sworn to and subscribed before me this 26th day of March, 1929. (Seal.) Mary L. Walker. (My commission expires March 30, 1931.)

NOTE.—This statement must be made in duplicate and both copies delivered by the publisher to the postmaster, who shall send one copy to the Third Assistant Postmaster General (Division of Classification), Washington, D. C., and retain the other in the files of the post office. The publisher must publish a copy of this statement in the second issue printed next after its filing.

When I think of what nature has meant to me, I cannot be grateful enough to my teacher, Mrs. Macy, who fostered in me an abiding affection for the glories of earth and sea and air. It was she who led me through the school of the earth and the university of the skies to the only true education, which is understanding the law of life. My mother, too, was passionately devoted to the out-of-doors. She loved nothing more than her flowers, and her love of birds was equal to her love of flowers. She would spend hours in the little wood near our house in Wrentham watching their pretty antics when they made love, or built their nests, or fed the young birds and taught them to fly.

I HAVE traveled about the country a great deal but I have never been able to accustom myself to the strangeness of life in cities. At home I have always been where I could breathe the woodland air. Winter and spring have always brought me wind-blown messages across marsh, brook, or stone-walled field. I have felt

> God's great freedom all around
> And free life's song the only sound.

All such peaceful, expansive sensations cannot be enjoyed in the throbbing whirl of a train, the rattle of lurching taxis, or the confinement of hotels and lecture halls. I have never been able to accustom myself to hotel life. The conventional atmosphere wearies me, and there is no garden where I can run out alone and sense the wings of glorious days passing by. At such times, I am painfully aware of the lack of personal liberty, which, next to idleness, is the hardest part of being blind. Nearly all the blind people I know—and I have known many—enjoy walking. It is my favorite relaxation, but there is one kind of walking I never enjoy, and that is in the heart of a great city, where I am played upon like a harp discordantly by the tramp of vast multitudes on the pavement and the rattle of trucks, street cars, and the elevated railroad trains crashing overhead—confusion worse confounded. This avalanche of vibrations seems always to leap at me with a fury of malice, as if it would destroy my body. A loaded cannon pointed at me would not have a more poignant and terrifying effect.

IT IS in the country that I am at home. Everything my foot touches is alive with interest. It matters not at what hour I enter my garden—whether in the cool, pure dawn, when the golden gates of the sun open, and the first rustle of leaves stirs to consciousness the bird in its nest; or in the noonday when all the banners of life are unfurled, and the sun's rays turn everything to splendor; or in the magical stillness of evening, when shadows steal across my path with soundless feet, and I sense "a folding of a world of wings," and down in the dusk of the grass, fireflies light their glow-lamps—I am filled with infinite gladness, and my heart sings the praise of the Creator, Who, out of space and eternity, made this little place for me, and sent the flowers to be my comforters in dark hours.

I enjoy my garden in all weathers. Even wintertime has its own sport and charm for me. As I walk briskly along, the wind shakes the snow down upon me from the hedge. Every few minutes, I pull off my gloves to revel in the touch of congealed loveliness on the trees and bushes—wondrous forms which God has

> Insculped and embossed
> With His hammer of wind,
> And His graver of frost.

Usually, by going from the steps along a cement path that turns off abruptly at the right, I find, without the slightest difficulty, the green circle of trees which surrounds my walk. But when the snow is deep, all paths are obliterated, so that there is no unevenness of the ground to guide my feet, and I get completely lost, but the adventure of blundering into every place but the right one gives me a good laugh or two before I successfully orientate myself beside the hedge. Indeed, Mark Twain's felicitous words form a spritely accompaniment to my steps. For I feel like Sandy when the Connecticut Yankee asked her, "Whereabouts does the castle lie? What's the direction from here?" You remember she replied, "Ah, please you, sir, it hath no direction from here; by reason that the road lieth not straight, but turneth evermore; wherefore the direction of its place abideth not, but is sometime under the one sky and anon under another, wherèso if you be minded that it is in the east, and wend thitherward, ye shall observe that the way of the road doth yet again turn upon itself by the space of half a circle. . . . It were woundily hard to tell [the leagues distant it is], they are so many, and do so lap the one upon the other, and being made all in the same image and tincted with the same color, one may not know the one league from its fellow, nor how to count them except they be taken apart."

IT IS when the book of the year opens at the page of June that I want to drop my work, whatever it may be, and enter the Kingdom of Delight. It is then that Nature receives the spring flowers at her Court, and each perfect day brings new beauties to grace the fête.

June-time within the green circle of evergreens that shields my garden is a wondrous woof of odors—evergreens and marsh-grass threaded with the scent of lilac and laurel. Bright-hued flowers mass beside me and hold up lovely faces to me. Where the grass grows softest, the violets open their blue eyes and look at me wonderingly. I call them dream flowers, because I always see them growing in the Garden of Sleep—violets and lilies of the valley. The honeysuckle trails over the privet wall, blessing every breeze with its fragrance. The wygelias reach out wraith-like arms to embrace me. When I push them aside to pass, how the winged plunderers of their sweets scatter in the sunshine! Tall irises from Japan and Germany display their exquisite gowns across the ribbonlike trails which the gardener has made around the summerhouse. In one corner of my garden there is a clump of old-fashioned lilacs. In June the boughs are weighted with loveliness and heart-penetrating odor—oh, nobody has ever put it into words!

If spirits wear garments, I hope mine will smell of lilac.

All through May and early June, a flaming tide of tulips spreads over the lawn, with here and there an island of daffodils and hyacinths. If I touch one of them, lo, a lily is born in my hands! As far as my arms can reach, the same miracle has been

wrought. Love, which fulfills itself in giving life, has taken possession of my Eden.

A while ago two visitors came and sat themselves upon the dogwood tree, which was all tremulous with white blossoms. It is one of the trees which border my green circle. Morning and evening, as I pass it again and again, I reach up to touch the branches. The two visitors, two robins, had decided to live in that dogwood tree. They went about the business of life with singleness of purpose. They did not seem to mind me.

At first, when I put up my hand to touch the branches, they would fly off to a nearby tree and I could feel them watch me attentively. But they soon became accustomed to me. I brought them food and in my awkward, human way tried to tell them I was a friend. They seemed to understand; anyway, they came and were quite indifferent to my doings. I would stand perfectly still for a long time with my hand on the branch, and often I was rewarded by feeling the leaves quiver and the twigs bend ever so slightly. Once I sensed a commotion very close to my hand and a few days later I felt a tiny claw pinch my finger. It was not many days before the male bird lit squarely upon my hand, and after that there was perfect understanding between us. A bird doesn't stay long on one's hand without saying something. My new bird-friend began to twitter; he hopped back and forth on the branch, telling his mate about me, I suppose. When the eggs were hatched, she came 'way out on the branch, probably to take a good look at me. She must have concluded that I was harmless, for she flew away on a foraging expedition, leaving her little ones at my mercy.

TOWARD the end of the summer, a blind friend of mine came to see me. We were chatting in my study. A thunderstorm came up suddenly, and the rain began to beat in. Elizabeth went to close the windows. As she did so, she heard a plaintive bird-cry, and, catching my hand she drew me to the window. "I believe," she said, "a bird is beating its wings against the screen." It was difficult in the rain to raise the screen; but we succeeded, and there, clinging to the vines which had clambered over the sill, was my little Robin Redbreast! He fluttered into my outstretched hand. He was limp and dripping wet.

After he dried off a bit, he began to fly about the room; I pictured him as scrutinizing everything with his inquisitive little eyes. When the shower ceased, we took him to the window, but he did not seem to want to leave us. His sharp claws pinched my finger; he tilted his body, as if he would say, "I am satisfied; why do you want me to go?" I put him down on the sill, and he flew back into the room. We managed to catch him, and again I put him outside the screen, and again he flew back into the study. This time he hid under the couch, and we could not find him. We had to get someone with eyes to dig him out. He hopped on the window-sill from one side to the other. I thought, "No doubt he is cocking his head this way and that, soliloquizing in this fashion: 'Oh, which do I prefer? Do I prefer you, or yonder tree? Shall I stay here, or go on and on, away, away, away? Oh, my heart aches with such contrary desires!'" At last

Make your Writing pay Dividends
"THE investment I made several years ago in the Palmer Course is paying me big dividends" ... writes Miss Zora A. Loveland, in reporting the sale of another short story. Already she has had stories accepted by Red Book, American, National Geographic, Photoplay and other magazines.
She is but one of hundreds who are daily making their writing talent pay dividends with the help of Palmer training. The Palmer Institute can develop that talent of yours until you too can write the kind of stories that tug at heart strings ... that grip the imagination ... that editors buy!
Palmer Courses are endorsed by many famous authors—among them Rupert Hughes, Gertrude Atherton, Ruth Comfort Mitchell, Katharine Newlin Burt, Jim Tully, Frederick Stuart Greene, Carl Clausen and Alex McLaren.
Send the coupon for booklet telling of Palmer successes and for full information about Palmer Courses.

he slowly spread his wings and unwillingly sailed away on the freshly washed air. He has never returned to the dogwood tree, nor to my hand.

Of all things that grow in my garden, I love best the evergreens. What a beautiful way they have of entering into relations with human beings! How readily they harmonize the wild nature of their forest kindred with our domestic habits. And how subtly yet powerfully they influence us while we set bounds to their growth.

The evergreens which grow on one side of my garden walk seem to know me as I know them. They stretch out their branches to me like hands and tease me and pull my hair whenever I pass them. In the springtime, when the world swims with odors of life, they bend toward me like friends full of glad news. They try to tell me what it is, but I cannot always make out what they are saying. I imagine they are asking each other why human creatures move from place to place, unstable as water, and as the wind that is always in motion. "Look!" they say, pointing their sharp little fingers, "look how she is going in and out among the flowers; like the mother the wind, she is blowing away out of sight."

IF I could fathom that murmur, that sigh, I should fathom the depths of consciousness of my evergreens. I do not know whether they speak of the future, but I am positive they could reveal the past. They could tell me what they have fared through in the immortality that lies behind them. I have felt the rings buried in trees—rings of the many seasons of births and deaths they died to reach this life. Why this thirst to rise higher? Why this love of stars and sun and clouds? Why this sense of duty to the earth, this fixity of purpose, this inward soul that remembers and sighs? As I stand beside my evergreens, they whisper: "All that is you has always been, and will always be. Every atom and every impulse of you began in eternity with us, and with us will return into eternity."

Oh, when my spirit is sore, fretted by the thought of the unhappiness in the world, it soothes me to walk back and forth beside my evergreens. I feel like a flower after a night's frost, when it steadies itself on its stem and looks up again to the sky with brave hope. And ever as I walk round my green circle, I seem to hear the song of the roots down in the ground, cheerily toiling in the dark. They never see the lovely work they have wrought. Hidden away in darkness they bring forth flowers of light! Little and despised are they; but, oh, mighty is their power to create flower and tree!

There are no trees I love more than the redwoods of California. My mother, who was with me when I first went to the west coast, worshiped them. "Nature's monarchs," she called them, and she declared that they were more impressive even than the mountains, "because human faculties can compass them. They are earth's noblest aristocrats."

We went often to the Muir woods on that first trip, and I have visited them many times since. How shall I describe my sensations upon entering that Temple of the Lord? Every time I touch the redwoods, I feel as if the unrest and strife of earth are lulled. I cease to long and grieve—I am in the midst of a Sabbath of repose, resting from human futilities. I am in a holy place, quiet as a heart full of prayer. God seems to walk invisible through the long, dim aisles.

All of us need to go often into the woods alone and sit in silence at the feet of Nature. A few years ago, I persuaded my conscience to turn its back upon prosaic tasks and go pleasuring in the open for two months. My teacher, Mrs. Macy, and a friend went with me. Our automobile was equipped with a tent, a small gasoline stove, an ice box, and, last but not least, my beautiful great Dane, Sieglinde, whose business it was to strike terror into the hearts of wandering Robin Hoods and other intruders.

One of our camping spots was a pasture in the Berkshires, where a brook laughed and romped. We were awakened in the morning by a herd of cows. I touched their glossy coats and wet noses as they investigated our bivouac; if they objected to this familiarity, they kept their thoughts to themselves. Another spot I loved was a pine wood near Lake Champlain. One night, we pitched our tent in a great hayfield out of Montreal which we called Stormfield because just after we had settled for the night a tempest burst upon us. We followed the St. Lawrence from Montreal to Quebec. From Quebec, we came down through Maine and camped on the Kennebec River. My teacher told me that logs were being floated down from Moosehead Lake to sawmills farther along. In order to get a sense of what the river was like, I crawled into it, keeping my body out of the reach of the logs and clinging to the rocks. The current turned me over and over like a leaf, but I managed to touch some of the logs as they shot past, and the sense of the adventure was delightful.

WHEN I am in the woods, I love to put out my hand and catch the rustling tread of small creatures in the leaves.

I love to follow dark roads that smell of moss and wet grasses, hill roads and deep valley roads so narrow that the trees and bushes touch me as I pass.

I love to stand on a little bridge and feel the brook flowing under it with minnows in her hands.

I love to sit on a fallen tree so long that the shy wood-things forget that it may be imprudent to step on my toes, and the dimpling cascade throws water-spray in my face. With body still and observant I hear myriad sounds that I understand: leaf sounds, grass sounds, and twigs creaking faintly when birds alight on them, and grass swaying when insects' wings brush it, and the thistle's silvery flutter. These sounds I hear, yet my way is still.

Sometimes when I am at home and the house is all asleep, I steal out into the garden, silent and dim, where lilies and roses grow together. In the delicate dusk of dawn I stand with the shadow-forms of the flowers, waiting expectant the mystery of the birth of day. The earth's breast is sweet with leaf-hidden violets. The skies grow bright—with lifted head I see my lover, the sun, raise his beautiful face above a silvery, misty sea; and I find the thing I have long sought and hoped for—the light!

"When the Arctic Gets a Man It Never Turns Him Loose"

(*Continued from page 61*)

astern, with fearful crunching, cracking, and sharp reports like cannonading. And all the time, from starboard, the folds of ice were pushing on toward the ship like the undulations of a slow earthquake, thrusting ahead of them the broken blocks.

"We were busy unloading when there was a frightful splintering of wood on the starboard, and we turned to see one of these ice boulders crowding onto the ship. The heavy oak rail was no better than matchwood in the path of that slow-pushing ram. Deck beams upheaved like the ribs of an umbrella, the masts leaned, the frozen rigging sagged.

"I went to my cabin," said Fiala, "to gather up my records and other belongings. Engineer Hartt came up and said the water had reached the fireboxes; he would be unable to keep up steam much longer. The beams were still groaning, and while we talked a shattering crash rang through the ship. The engineer rushed below.

"There followed a period of utter silence. All that I could hear was the labored throb of the pumps. It sounded like the pulse of some dying creature. And I felt that it was time to go The electric light had faded to a dull red; the pump gave one feeble beat, and died as the steam failed. As I passed down the companionway I saw Hartt draping an American flag over the engine. It had been his pet for two voyages north, and he was much affected.

"Scarcely had we landed when there came another squeeze. This time the ice thrust under the ship, lifted her bow, and with the vessel in that posture, the waterhole quickly froze."

FOR two months the wreck stuck there, a gaunt reminder which the huge snowdrifts could never cover up. The men revisited it many times, and dismantled it of cooking stove, doors, bunks, and other parts that could be used in enlarging the overcrowded hut. Then, in January, another hurricane swooped down on Rudolf Island, raging for three days, and when it was over the America had disappeared.

"We were then in the depth of winter," recalled Fiala. "The thermometer dropped to 52 degrees below zero, but with plenty of food and fuel we were snug in our little hut, and busy with preparations for our polar trip in the spring.

"The sun reappeared at noon on March 3, and that was our signal. Next day we dragged out the loaded sledges, lashed on the top loads, and tried the dogs. High winds delayed us until March 7. That morning we started over the glacier, headed for the north shore of the island, from where we proposed to sledge northward over the ocean to the Pole. We were twenty-six men, with sixteen ponies and twelve dog teams.

But the Arctic had said *No*, and the frus-

What to do with
Old Razor Blades!

DON'T throw them away! For old razor blades are worth real money—now that KRISS-KROSS rejuvenates them an amazing way—and gives them the kind of edge you have only dreamed about until now. And not only that, it can take a new blade right out of a fresh package and increase its sharpness almost 100%!

KRISS-KROSS makes blades last astonishingly, too. Ten weeks of slick shaves from a single blade is only a low average—while any number of cases are on record where one blade has lasted for 365 keen, cool shaves a year! KRISS-KROSS fits all blades except Durham—and to make it easy to test it, we are announcing a special limited offer. Right now we are including without extra cost a new kind of razor never sold in stores. Adjusts 3 ways. Find out about it today. No obligation. Write today.

AGENTS!
Find out how to make $100 a week and more just showing KRISS-KROSS to men in your locality. Full or spare time. R. S. Hopkins, (Mich.) made $20 first day. We show you how. It's easy. Write today.

Herpicide saves your hair

This simple "1-2-3 *Method*" for men removes dandruff, saves the hair and keeps it well-groomed.

1. *Shampoo the hair at suitable intervals with Herpicide Tar Soap.*
2. *Rub Newbro's Herpicide (the original scalp germicide) daily into the scalp.*
3. *As a final dressing apply Newbro's Herpi-Lay to keep hair in place and give it lustre.*

By following the "1-2-3 *Method*" every man and woman can have healthy, well-groomed hair.

Sold at drug counters. Applied by barbers. Send 15c to Dept.-H, for "1-2-3 trial treatment"

***The* HERPICIDE CO. DETROIT, MICH.**

Poor English!

How much is it costing you in wasted opportunity?

Every day your associates are judging you—by what you say and how you say it! Hazy ideas, ill-chosen words, halting sentences, crude, slovenly speech—these mark a man as loose in thinking. Thoughts clear-cut, words that give true shape and color, sentences aflame with power and originality—these are the things that proclaim ability, that win for their users swift advancement. Stop apologizing for poor English—it's inexcusable! In the quiet of your home—with LaSalle's help—you can learn to speak and write with real distinction, learn to make the words you utter and the letters you compose stamp you as educated, cultured, a power to reckon with in the business world. Complete details in an attractive 32-page book, "Effective Business English," sent you free upon request. Ask for it TODAY.

LaSalle Extension University, Dept. 633-BE, Chicago

Stop PAIN

in 3 minutes this new way

HERE is a new and totally different way to treat a corn or a callus. One drop stops all pain. You wear tight shoes, walk, dance, in comfort, **instantly and at once.** Acts like a local anaesthetic; really amazing.

Then soon the corn shrivels and loosens. You peel it off with your fingers, like dead skin. No more dangerous paring.

Works alike on any corn or callus, no matter where it is, how old or how painful. Ask your druggist for "Gets-It." You will be delighted.

"GETS-IT" *World's Fastest Way*

trated men turned southward and back to camp after suffering agonies and injury and stark disappointment.

"But I just couldn't give up," said Fiala. "I vowed to make at least one more attempt, and called for volunteers. Thirteen men volunteered to stay with me. Twenty-five voted to go home, and I felt it my responsibility as leader to see that they got safely to the ship."

Cape Flora is almost the southern tip of Franz Josef Land. To get there from Rudolf Island required a journey of one hundred and sixty miles over melting ice. Fiala and his party made it successfully in sixteen days' sledging.

Fiala stayed at Cape Flora until late September, when it was plain that no ship could get through that year. Then the men who wanted to go home could only wait, and they settled down to spend the winter at Cape Flora. They were established in two huts, with stores of food and fuel. Fiala appointed a leader to each hut and assigned ammunition for the winter's hunting. Then he and six of his volunteers loaded their sledges for the journey back north to Rudolf Island, to rejoin the other volunteers who were already preparing for the final dash north in the spring.

"WE WERE fifty-four days on that trip," said Fiala, "and the last half of it was mostly one long groping in the darkness, feeling our way with tent poles over thin ice that bent beneath our weight.

"Our food got low. Sixty miles ahead was a cache, but to reach it we must cross that channel and sledge a long stretch. I put the dogs on quarter-rations, and we cut ourselves to half-rations. Then came that memorable Sunday—the greatest in my recollection. I read to the men from the sixth chapter of Matthew: 'Therefore take no thought, saying, What shall we eat? . . . Take no thought for the morrow, for the morrow shall take thought for the things of itself.' They were very attentive and serious. All realized that we were at a crisis.

"That night a polar bear prowled into camp; after a frantic chase, I shot him just as he was about to leap into the sea—and our food problem was solved. We lived luxuriously on bear steaks, burned his blubber for fuel, and the dogs feasted. Then, on a rare day when ice jammed the channel, we crossed the sound.

"Ahead was a great glacier. One of our party had crossed it during the summer and said it was safe. So we didn't rope together as ordinarily I required in traveling a strange glacier. The weather was thick and the light dim—only a faint twilight between 10 A. M. and 2 P. M.—so we halted the sledges at intervals and walked ahead to pick a trail over the snow. On one of these halts I had passed a few yards in advance, when suddenly the snow caved in under me. I found myself hanging over a crevasse, clinging with my fingers to the ice edge!

"Spencer, the steward, ran to help, and as he reached me the ice broke.

"I awoke in a dark pit. My nose was touching something hard and black and horribly cold. Behind me was something equally hard and cold. I was wedged by the breast between these two walls, with my left arm bent over my chest. Arm, breast, ribs, and back were in sharp pain, but my legs hung free. I kicked them backward and forward and sideways, and couldn't touch anything. Evidently the walls that held me didn't extend below.

"Then, still in a daze, I remembered falling through the glacier, and looking up, saw a faint patch of blue. It was the hole through which I had plunged—by contrast with this abyss the Arctic night was luminous. Long pencils of light streamed down the sloping ice walls, and I could see that I had dropped into a gigantic funnel. Only the thickness of my left arm had saved me from slipping through the neck to the lower depths.

"I heard voices calling from above, and answered. They shouted encouragement, said they were lowering a rope.

"Then I heard deep groans. They seemed to come from below, to my right. My first thought was that a team of dogs had fallen, but in another moment I heard words and recognized a voice—'Commander, are you there?'

"It was Spencer. In trying to help me, he had fallen. I couldn't see him—I couldn't see anything in that lower inferno—but I could tell that the fall had unnerved him. 'My head's cut open and my brains are oozing out,' he reported between groans. 'What's the good of the North Pole, if we have to die in this pit?'

"At last I felt a rope dangling, and grasped it. I made a bowline in the end, working with my right arm and the free fingers of my left. Slipping the noose over my right foot and hanging on with both hands, I called to those above to haul away. Gradually, by their pulling and my wriggling, I unwedged myself, and swung free like a plumb bob at the end of seventy feet of line.

"MY FIRST task was to find Spencer. The echoes were everywhere; I couldn't locate him by calling. Finally I told him to look up at me against the light, and indicate the direction by calling right or left. In this way we found him, and I was lowered ten feet to his position.

"I told him to catch hold—he weighed only ninety pounds—but immediately the men above yelled, 'Let go. It won't stand the weight.'

"Then I proposed to change places with Spencer. But he said, 'No, you'd fall a thousand feet if this ice slab slipped. I'm on the piece that broke and fell with me. It's wedged between these walls, but every time I take a deep breath it rocks. You go on up,' he urged, 'and send the rope back for me.'

"So I signaled the men to haul away, and the line sang like a telephone wire as I swung there. It was the sledge traces, a cotton cord three-eighths of an inch thick, the same as is used for window cord. I remembered a worn, raveled spot I had seen that morning as I was harnessing the dogs. Suddenly I felt giddy, limp, unstrung. Pains were shooting through my breast, my left arm ached acutely. Would the line hold? It did hold.

"We were still more than a hundred miles from Rudolf Island," Fiala said. "The remainder of the journey was a succession of encounters with young ice, glaciers, storms."

The remainder of the winter was spent in preparation for the spring dash north. It was begun on March 16.

"Our trail north that trip led over mountainous pressure ridges that spin-

tered and thundered as we attempted to surmount them," related Fiala.

"Then we would come to a lead of open water, and it was either wait for the ice to drift together, or ferry across on an ice cake, or build an ice bridge. Any process was laborious and time-consuming, and often brought heartbreaking disappointment. As we advanced, the ice seemed to grow worse, more confused and broken. I stopped the sledges, and all hands went forward with ice picks and axes. It took three hours to cut a trail a hundred feet. But again and again we had to do this.

"I climbed a giant pressure ridge. I could see the ocean northward for miles—an unending wilderness of sharp ridges, overturned blocks, and rippling water lanes steaming with vapor. The thermometer was rising rapidly, it reached 34 degrees that day and, in consequence, the ice was melting and breaking up.

"We camped that evening for supper and rest on the only flat block in sight. It broke in two within a few feet of our camp an hour later, and while we were sleeping a crack appeared, with a loud report, right under one of the tents."

NEXT morning the little band turned southward. The ice had won. The Arctic again had said *No.*

The explorers sledged back to Rudolf Island, broke camp there, and sledged on to the south of the archipelago. They had reached Cape Dillon when the relief ship, which had already rescued the men at Cape Flora, picked them up on July 30.

Fiala's chance to see the Tropics came in 1913 when Colonel Theodore Roosevelt invited him to go to Brazil with him.

"How did you like it?" I asked.

"I wouldn't swap the Arctic for the Tropics," he answered. "There is something straightforward about nature in the North that I missed in the Tropics. The Arctic is hard and uncompromising, but one knows what its conditions are. The jungle seems more inscrutable—it is living, creeping, squirming, treacherous."

Out of his experience with the Roosevelt expedition came a tropical tent designed to keep out insects and let in air. Another device was a safety appliance for canoes, to reduce capsizing hazards.

I asked the Major—he won that rank in the World War—if he would care to go to the Arctic again.

"Yes," he answered with quiet emphasis. And then, "If I went North again, I'd use tractors."

"But the ice—wouldn't it break through and the ocean swallow up the tractor?"

"The Army has a tractor that floats," answered Major Fiala. "With a dog team," he went on, "the best speed you can make is four or five miles an hour. A light, canvas-tread, caterpillar tractor would make eighteen or twenty miles, and on rough ice it would go as well as dogs.

"Tractors will enable the explorer to take soundings and make magnetic observations at regular and frequent intervals. My idea is a scientific survey of the Arctic Ocean from Franz Josef Land across the Pole to Grant Land. I believe there is land northwest of Franz Josef Land." And he reached for his memoranda and went into a detailed explanation. He had the whole project worked out.

There's no cure for Arctic fever.

Now Comes The New Shorthand

FOR years there has been a crying need for a really modern, scientific shorthand that could be written RAPIDLY—that would be more ACCURATE—more PRACTICAL—and could be learned more EASILY and QUICKLY than ordinary shorthand. Now at last it is here—the new shorthand. Business and professional men and women everywhere have hailed it with enthusiasm. Experienced stenographers as well as beginners are adopting it.

Speedwriting
The NATURAL SHORTHAND

Right this minute you know the fundamentals of this amazing new method—you use the same "A-B-C's" as you do in your daily speech. No need to spend long, tedious months memorizing a "foreign language" of dots and dashes, hooks and curves. You start using Speedwriting in a few hours and in a few weeks you can acquire all the speed and proficiency necessary for practical work.

Speedwriting was originated by Miss E. B. Dearborn, who has taught practically all systems for eighteen years in such institutions as Columbia University, Rochester Business Institute, Simmons College, and the University of California.

Details FREE

(*Continued from page 43*)

from wanting to show his love. The devil of it is, if you are short on time and money, it's pretty hard to put the idea across. I can't write poetry to my wife. I can't even *read* the poetry written by one of these regular, qualified, union poets—that is, if he pulls anything deeper than the old home-and-mother stuff that we used to get in McGuffey's Fifth Reader."

Oh, there's no doubt in my mind that nine out of every ten husbands mean well. The trouble is that they get into the habit of bringing home bread and bacon instead of flowers and candy, and after a while flowers and candy get pushed back into the woodshed part of their minds, along with a lot of other things which they intend to get around to some day.

But when their attention is called to their shortcomings—by anything except wifely reproaches—they are eager to make amends. Look at the way they jump at any straw that points the way. In less than three weeks after the publication of the article in which I told about my gifter-week club, I had letters from dozens of men who wanted to become members.

PERHAPS you recall that the gifter-week club was started by a North Carolina man who suddenly woke up to the fact that he was forgetting his wife's birthdays and all their joint anniversaries. Shocked by this discovery, as well as by the thought that the years were passing very swiftly, and with them the chance to show his wife how dear she really was to him, he wrote me that he had worked out a plan by which no week should go by without his wife's being reminded of his love for her. Each week I was to select some small present and mail it so that it would reach her by Friday or Saturday. He wound up with something like this:

"I'm not a rich man, and I'm afraid I can't spare more than three dollars a whack. What I want is a sort of little surprise package with something inside that she can't use on the house, or the kids, or me."

Well, as I say, that idea drew blood—and lots of it! Men from everywhere simply fell over themselves in their hurry to get in on the gifter-week plan. Besides the hundreds of orders that came to me, many were received by other purchasing agents—there are a hundred and twenty-odd of us in New York alone, you know. All sorts and conditions of men wrote in. Rich men, poor men, and yes, the thief that I spoke of at the beginning. I'm coming to him in a minute.

There was one man, apparently a rich one, who wrote me from a certain neck of the woods. "I've been married twenty-one years," this man told me, "and I've never remembered our anniversary with a gift. Likewise, most birthdays have gone unobserved. Your story of what these other men do for their wives makes me ashamed of myself. Not one of them is married to a finer woman than I am. Yet, from the way I act about some things, you'd never guess that I feel that way about it.

"My wife's birthday comes the fifth of next month. I want to make up for lost time; so I'm enclosing a check for two hundred and fifty dollars. Get her something handsome, even if it takes twice that much. I guess I can stand it. From now on, it's going to be 'free, wide, and handsome' with me where my wife is concerned. Just because her hair is getting gray is no reason she doesn't still *feel* like a girl about a lot of things.

"Maybe it's funny to other folks, but I always think of her as looking exactly the way she did the day I carried her in my arms over the threshold of the lumber camp shack where I took her as a bride. I promised her silks and satins and everything fine then. And as soon as I got the money I forgot all about my promises. I just handed her the cash and told her to get what she wanted. I guess that isn't the same thing as springing a little surprise now and then.

"After I read that piece of yours the other day, I went home and took a good look at 'Mother.' It gave me quite a shock when I saw that she isn't as young as she once was. Well, from now on, the sky's the limit! You'll get a check the first of every month."

Thus far the checks have turned up on schedule time—good, substantial ones, too! And I wish you could see the delightfully frivolous things I have sent "Mother." I can assure you that they are calculated to make any woman forget that her youth is behind her. For her birthday, I sent her a gold and silver evening shawl which would make any feminine heart turn somersaults of pure ecstasy. Since then I have sent her perfume, exquisite handmade lingerie, and quantities of other beautiful things.

But I am quite positive that the gift which gave her the most joy was her husband's letter to me. I sent it to her under a pledge of strict secrecy. If he sees this, I ask him to forgive me for breaking faith with him. I simply could not resist the temptation to make a fellow mortal *perfectly* happy. And I have the satisfaction of knowing that I helped to do that very thing!

SPEAKING of anniversaries reminds me to tell you about a clever young chap who certainly ought never to have any matrimonial troubles arising from his failure to observe these special occasions which are so dear to a woman's heart. During his courtship he was what you might call actually *forehanded* in remembering anniversaries. About six months ago, I had a letter from him which ran like this:

"I'm leaving soon for South America, to be gone a year. My girl won't wear my ring because she claims she doesn't want to 'tie me down.' Between you and me and the much abused gate-post, *she's* the one who doesn't want to be tied. Since the minute I laid eyes on her, I've been hog-tied and ready to be led to the slaughter.

"But what I set out to tell you is that there's another fellow on the ground. They say all's fair in love and war. Be

hat as it may, I'm taking no unnecessary hances. I may be out of sight, but I on't intend to be out of mind. Not if I an help it!

"I'm leaving an order with the florist bombard her with flowers every week. ll personally shoot the letters and cable-rams along. Now, here's where you ome in: I want you to send her ten dol-rs' worth of something tricky and New orky every month. Not exactly the fter-week idea. She reads THE AMERI-AN MAGAZINE and she'd get onto that ght away.

"You know how hipped women are on e subject of anniversaries? I've got a unch to play up that idea. Please split the ten dollars so as to make it cover ree dates. The first present should ach her on the fifth of every month; I et her on the fifth. The second package ght to get to her on the eighth; that's e anniversary of our first—well, you can obably guess what happened on the ghth! Send the third reminder on the enty-fifth. I've told her that we're go-g to be married during the Christmas lidays. That's when I come home on y vacation."

For the benefit of all masculine readers, will add that the young man's hunch rked. Less than a week ago I had a ter from the lady in the case. She in-rms me that she will be in New York an extended shopping tour this sum-r and that she would like my help in ecting her trousseau. It seems that she 't going to wait for her forehanded ung man to come home; she's going wn to him. I understand that the wed-g is to take place early this fall.

MOST men cannot afford to spend any-thing like the amount spent by the men I have just told you about. Along h the charter member from North rolina, the bulk of my gifter-week mbers can spare only "a few dollars a ack."

However it is not the size of the lay but the thought back of it that nts with the feminine recipients at the er end of the line. I wish that you ld run through my files and see for rself some of the notes I have received n the wives and sweethearts who have n surprised by weekly parcels from w York.

One woman wrote: "Thank you from bottom of my heart. I believe that r idea has saved my life. I didn't need ing on earth but the assurance that husband doesn't take me for granted."

One of my favorite gifter-week mem-s is a boy from Texas who is up here in w York bent upon winning fame and une. He can afford only a dollar a k. I don't know how he manages to eeze out that much, for he told me e frankly that he is making only nty-two dollars a week.

can promise you that I am going to e that boy's dollar buy more than any r ever before bought in New York, is gifter-week parcels to his mother. 's the very best ever," he wrote me. eckon any fellow worth his salt could down on lunches and smokes to ten up things a little for *her*. I can mber when she would have her shoes soled, instead of getting the new pair she needed, so's I could have a

That indefinable air of exquisiteness

Lysol Disinfectant
REG. U. S. PAT. OFF.

THE air of daintiness that hovers about a woman who is fastidiously groomed does not come by chance.

It arises from attention to those intimate phases of the toilette which are sometimes neglected—and sometimes misunderstood. Charm is more than beauty of face and figure. It arises from a well-cared-for body, from the health and vivacity which are so largely aided by meticulous cleanliness.

Every woman should know the facts about feminine hygiene. It is modern science's safeguard for women. The makers of "Lysol" Disinfectant offer you, free, a booklet called "The Scientific Side of Health and Youth." It was written by a woman physician. It gives professional advice and explicit rules. It answers the questions you would like to ask her in person. Send the coupon now.

But do not wait for the booklet to arrive. Buy a bottle of "Lysol" Disinfectant today. It has been the unquestioned standard for personal hygiene for 40 years. Simply follow the directions that come with every bottle. Sole distributors: Lehn & Fink, Inc., Bloomfield, N. J.

"Lehn & Fink Serenade"—WJZ and 14 other stations associated with the National Broadcasting Co.—every Thursday at 7 p.m., Eastern Standard time; 6 p.m., Central Standard time.

ENGINEERING degree in TWO years

NO ENTRANCE EXAMINATIONS
We are interested in helping men who may be short in money, time and education, but who are strong in the desire to improve themselves. Standard university engineering course cut to 96 weeks by eliminating frills and concentrating on Science, Mathematics, Drafting, Laboratory and Field Work. If you haven't a high school diploma, we'll give you the necessary subjects.

Engineering Courses Given:
☐ Aeronautical
☐ Civil
☐ Electrical
☐ Mechanical
☐ Chemical
☐ Administrative
☐ Commerce

LOW TUITION
Meals and room in Angola as low as $5.50 a week. No extras (except "lab" materials). Wonderful bunch of students. B.S. degree (Bachelor of Science) conferred by State authority.

FREE CATALOG Terms start Sept., Jan., March and June. State which course you are interested in.
TRI-STATE COLLEGE Box E-A103 Angola, Indiana

BIG MONEY in MECHANICAL DENTISTRY
Learn in few months to make plates, crowns, bridges, etc., for dentists. Earn up to $125 a week. No books. Day or night schools in Chicago, Detroit, Cleveland, Boston, Philadelphia.
McCarrie School of Mechanical Dentistry
1338 S. Michigan Avenue Dept. 253 Chicago, Ill.

30 Days' Trial Offer
New Models now ready for delivery direct from our factory. *Astonishing* low prices and terms. Do not buy until you get them. RIDER AGENTS WANTED to ride and exhibit sample. Make big money. Many models $21.50 up. Tires *Guaranteed $1.50* each, wheels, lamps, horns, equipment at *half usual prices*. Send No Money. Write for our marvelous prices and terms on RANGER Bicycles.
Mead CYCLE CO. Dept. C-37 CHICAGO

MAKE MONEY AT HOME!
Painting photos and miniatures. No talent required. Fascinating work. Make $35-$100 a week. Earn while learning. We teach you at home. Professional artist's outfit, employment service, given. Write for FREE book TODAY.

catcher's mitt. I guess *that* tells you what sort of a woman she is."

It strikes me, however, that the boy's attitude toward his mother tells the most important part of the story!

And now we come to the thief whom I mentioned at the outset. He is "doing" five years in one of our largest penal institutions. Whatever his shortcomings as a citizen—and obviously they are serious—he has some redeeming qualities as a husband.

He was among the first to join the gifter-week club. And every Monday, as regularly as the day rolls around, I get five dollars from him. He earns the money in the prison tailor shop. Of course, he could send it direct to his wife, but, as he explained in his carefully written letter to me, "that wouldn't be so good, because it would remind her of where I am. I want her to think of me as just being off on a long trip.

"It's long all right!" he went on. "I got sent up eighteen months ago. It seems like eighteen years. Maybe they'll shorten my time for good conduct, and I'll get back to Lola in the next hundred years. I won't let her come up here to see me. I don't want her to get a picture of me in the gray in her mind.

"Her folks are pretty well off, so she won't suffer for anything. But I'm afraid she'll get into trouble some way. She's too young to be foot-loose—only nineteen—and she's as pretty as a picture. The best is none too good for her. I never did measure up. She doesn't know it, but they got me because I was trying to make money fast enough to buy her a fur coat she was begging me for."

Along with the letter, came a number of handmade cards on which were inscribed various loving messages to accompany the gifts. The phrases which occurred most often were:

"From Jim with love. Be good till I get back."

Maybe I'm a sentimental old woman, but I like to think that the little presents which I select for Jim's girl every week will help her in her uphill job of being good. It isn't the easiest thing in the world for a pretty, pleasure-loving young girl to remember that she isn't free when her husband is away on a five-year trip!

OF COURSE, there are some amusing letters among the three thousand and more that have come to me. But even these betray the fact that the writers are hungry for romance. One man sent me a check for a hundred and fifty dollars, together with an order for a reducing machine. He says that he is thirty-six years old and that in spite of the fact that he has been putting on a little flesh lately, it never occurred to him that anybody thought of him as actually decrepit—that is, until he attended a certain dance this spring. On this occasion it seems that a little débutante with whom he was, as he fancied, blithely fox-trotting, looked up into his face and demanded earnestly, "Please tell me, Mr. Blank, why you never got married?"

"It was the dreadful finality of that *never* that completely unnerved me," commented poor Mr. Blank. "For Pete's sake, send that rejuvenating machine along as fast as you can—there's no time to lose!"

Another young chap wanted a sure-fire cure for baldness. He suggested that I try the remedy on my husband before sending it to him. I had to write him that there are lengths to which even the most accommodating of purchasing agents cannot safely go.

Several requests have come in for wives. One man, a prosperous Oregon farmer, took the trouble to describe his ideal in detail. "She must be a brunette and of a lively temperament," he informed me. "Above all things, see that she is healthy. I don't want a woman who whines; I'd much rather have one with a wart on her nose."

As an incentive to speedy action on my part, he concluded with a promise to send me a barrel of his best apples just as soon as I produced a girl who would come up to his requirements. For the benefit of all interested brunettes, I submit the information that I have not yet received the apples!

THUS far, only one woman has asked my help in landing a husband, but she certainly wasted no time in beating about the bush. "I want to join the gifter-week club on my own account," she wrote. "Please send me an inexpensive present every ten days or two weeks—whatever you think would be calculated to put a little life into a man down here who has been hanging on for five years without coming to the point. I'm sick and tired of waiting for him to propose. This is his last chance to pop the question himself. If he doesn't come across pretty soon, I'm going to come out flat and ask him what his intentions are, if any!

"Here's my low scheme: Week before last, I spent three days in New York as a delegate from a church organization to which I belong. I didn't meet a single, solitary man who interested me one bit, but I'm letting Ed think that I did. I've already managed to get several letters with the New York postmark, and I can see that Ed is upset. A book or so, two or three boxes of candy, and a couple of pieces of sheet music ought to turn the trick. Ed plays the flute, but even I don't think he is much good at it. I've hinted to him that my New York friend is very musical. He informed me that no real he-man would ever take music seriously. Hence, my suggestion about the sheet music.

"I suppose you think I'm made of brass, but I just don't care one bit. I give piano lessons to beginners, and I hate scales! What I want is a house and children of my own, and I certainly will appreciate any help you can give me. Go as far as you like. As Ed would say, just let your conscience be your guide!"

Two or three parcels, including a roll of the latest musical hits, have already been dispatched. The latest report from the front brings the news that Ed has invested in several shares of building and loan stock. That ought to be a good sign. Anyway, I'm certainly doing what I can to help Ed's future wife sprinkle a little salt on the tail feathers of romance!

Judging from the incidents I have told you about thus far, you probably think that I am interested only in the man-and-maid variety of romance. Not at all. As a matter of fact, I believe that the letter which thrilled me most came from a

nother in a little New England town. he enclosed a check for ten dollars, with ne request that I buy a complete outfit or her fifteen-year-old daughter, who was o graduate from high school in June. Mind you, the check had to cover dress, ip, white slippers, and silk stockings to natch. This was asking right much of en dollars—and me!

I combed the town for bargains, and, ventually, I assembled a dainty little ostume which would have delighted ne heart of any sweet girl graduate. The ll came to $11.50, but my client was deghted with the result of her investment. ne sent me a lovely note of thanks, and er young son included a snapshot of his ster to prove to me that she is really as retty as her mother thinks she is. When saw the picture, I quite agreed with my cretary, who exclaimed:

"My, she looks sweet enough to eat!"

Shopping for others is often a strenuis job, but it is rarely a dull or thankless ne. On the contrary, it is full of excitement and pleasant contacts. The latter equently ripen into lifelong friendships. Out of the hundreds and hundreds of ders I have had as a result of the arti: in The American Magazine, less than lf a dozen proved impossible to fill beuse the clients were unreasonable in eir demands.

Thank goodness, the vast majority of y clients exhibit a spirit similar to that own by a young oil tester who wrote from the Southwest explaining that he is very much in love with a schoolacher a thousand miles away. He went to say that, being a poor letter writer, thought that a gift a week might adnce his cause considerably, and he ound up by declaring. "And whether vin, lose, or draw, in the young lady's ections, I sure will appreciate your orts!"

Rattlesnake Golf

(*Continued from page 25*)

"Stacey don't dare sink 'em any eper on this land,' says the Colonel, en when he sinks 'em into a flat rock e this. This rock's pretty thin, and it ildn't resist an awful lot of pressure.' "What pressure is he afraid of?' says llis, kind of puzzled—as I was myself. "The pressure of the oil,' says the onel. 'It's liable to bust through anyere here.' I knew by the look on his e and the way he drew in his breath t the real selling campaign was about tart.

'Is there oil here?' asks Willis.

'Is there oil?' says the Colonel, in a d of hushed and reverent voice. 'Is re *oil?*' And he took off his hat, like he in church, or the national anthem was ng played, or something.

'Oil,' he said. 'Oil!' And then all the ural poetry in that man's nature red itself. Willis and Thompson and cowboys and me gathered round him circle, and it was like bells ringing ss moonlit waters, and music playing, childhood's happy days come back, golden dreams of young love coming and going on forever into the golden et of life—it was like that to listen to

Keen, clear-eyed health is so easy when you are free from

Intestinal Toxicity

ENO
THE WORLD-FAMED EFFERVESCENT SALT

It isn't as if it were such a great problem these days—the building of health, brimming, weather-proof health. Medical science has gone forward so fast that there is little reason for us to be otherwise than healthy. All too often sickness is the result of neglect.

Take this matter of intestinal hygiene for instance. We know that bad breath, headaches, tired digestion, are usually symptoms of intestinal toxicity . . . warnings that accumulated poisons are at work destroying health. But what do we do? We "cover up" bad breath with some disinfectant—fight the headache with a drug—take a cathartic to "stimulate our appetite"!

Intestinal toxicity is not a condition that can be overcome in a day—nor, with rare exceptions, by drugs. It has been shown that a balanced diet, plenty of water, fresh air and exercise are usually sufficient.

However — here is a suggestion that has helped countless people to remain "intestinally" healthy. Countless thousands have found that Eno's Effervescent Salt provides exactly the right assistance necessary to carry out such a program successfully.

For Eno is utterly unlike bitter, drastic cathartics. It is an easy, refreshing laxative that never gripes or interferes with your daily routine. It simply flushes and cleanses the eliminative system. Its alkaline reaction combats acidosis, sweetens your stomach and clears your head for the day. It creates no habit.

Try Eno in the morning or evening for one week and judge of its value for yourself. This effervescent saline has been the world standard for almost sixty years. Your druggist has Eno at 75c and $1.25 a bottle.

Prepared only by J. C. Eno, Ltd., London, England. Sales Agents: Harold F. Ritchie & Co., Inc., Belmont Building, Madison Avenue at 34th Street, New York.

Eno—health precaution—will cost you less than 3c a day

When you get up, simply take a glass of water and add a generous teaspoonful of Eno. Taking this sparkling, delightful saline regularly will help to keep you fit and eager through the hardest day.

For a business headache, nothing is better than a glass of Eno. You can get it at the better soda fountains everywhere.

Name.....

Address.....

Colonel Elwood B. Sanford talk of the oil under that land of mine. He made even me believe in it.

"You're innocent, and you're Eastern, and in all your benighted life it's possible you never listened to an oil talk delivered by a born artist. I can't convey to you second-hand any of the solemn and almost religious feeling of it when it's put across properly. We have got beauty out here in this sun-kissed land of ours, the beauty of flowers and fruits and blue skies and glorious business opportunities and optimism and rejuvenated health, but there's no beauty anywhere in the world like the beauty of an oil talk when an old master like Colonel Elwood B. Sanford sweeps the strings of his angelic harp.

"I think he's a dirty old crook, on account of something I'll tell you later; but in some ways I've got to hand it to him. By the time he got through I was almost sobbing with uplift and patriotism and business possibilities, and I was crazy to buy that land myself. I would, too, if I hadn't been unfortunate enough to own it already.

"There was a kind of solemn stillness when he finished, and then one of the cowboys broke the tension by lighting a cigarette. He flipped the match, still burning, into the one and only greasewood shrub on my place. You may not know about greasewood. It don't so much take fire as it explodes.

"'Just see that!' says the Colonel, as the greasewood plant flared up like two bushels of celluloid collars. 'This land is so full of oil that the plants suck it up; their roots are fairly swimming in it. You boys better be careful where you throw your matches after this.'

"'But why don't you let the oil come up?' asks Willis; and it seemed a perfectly reasonable question to me.

"'Major Stacey has been waiting until he could start his own refinery out here,' says the Colonel, 'so that other people wouldn't get the bulk of the profits.' And it sounded like a reasonable answer to me.

"This oil talk relieved my mind a good deal. Willis looked too intelligent to me to fall for the rattlesnake vests and the chili grass; although he'd said nothing. On the way to the second driving tee the Colonel mentioned potash, and that seemed reasonable, too. While we were playing the hole the Colonel sold Willis on the divots we took, which showed sulphur, copper, and borax, and that was all conservative enough.

"THEN he got romantic again, when we pitched up onto the green. My second green is at the corner of what was going to be Orange Drive and Orchid Avenue. For some reason that's always been a popular street corner for Gila monsters to loaf around. Ever see a Gila monster? Well, he's a varmint that looks like he had wanted to be an alligator, but his growth had got stunted by lack of food, water, and public appreciation. He's sad about it, and the only noise he ever makes is like he was snoring. The cowboys had to boot a dozen of them out of the way before we could putt, and then get rid of a rattlesnake that was coiled in the cup itself.

"The Colonel sold the place on the desert crocodiles, as he called the Gila monsters, and the profit from their hides, and a little later he sold it again on a swarm of desert gnats we had to play through—bees that made desert honey, the sweetest in the world, from cactus, he said. I wished he'd quit saying desert this, and desert that, all the time; for I didn't want that word desert to get drilled into Willis's consciousness.

"AT THE seventh hole, which is at the corner of Avocado Street and Chrysanthemum Terrace, he tried to palm off a convention of buzzards as eagles, and figured out for Willis what he'd make a year selling eagle feathers to the Indians. It didn't sound so good to me. I wished he would stick to oil, which is dignified, conservative, and legitimate. The desert ticks and horseflies he snubbed entirely. He sold for a while on gold, iron, tin, radium, silver, magnesia, zinc, lead, and I felt a little safer, for there's lots of pretty-colored rock there.

"But I always will think he made a mistake when he tried to represent a coyote which Willis saw galloping in the distance as a sheep dog.

"'Where are the sheep?' asks Willis.

"Just then a bunch of these long-tailed white rats that inhabit the desert trooped over a hill and down into an arroyo, and I yelled out quick to Willis, 'My sheep have all been sold and shipped!'

"For I saw in that Sanford's eye that he was going to try to represent those rats as desert lambs, or something. His mouth was open to do it. He closed his mouth and gave me an aggrieved look, like I was cramping his style, and then he opened his mouth again and sold those rats as desert foxes.

"'There's a vitamin in the soil on the Major's place,' he said, 'that makes the fur of these Southern white foxes finer and silkier than the Northern species.'

"We were playing along the edge of the canyon itself then—as I recollect it, at the corner of Apricot Avenue and Riverbrink Drive—and the usual sand-storm was in progress there. You've always got to play through one to get into the canyon and to the tenth green, and to get out of it again by way of the eleventh, twelfth, and thirteenth holes, which are sort of terraces, or shelves, or ledges, as you might say, on the far side. There's lots of climatic diversity on my place, but in the canyon itself there's only one season—that's the sandy season. Daytimes the sand washes out of the hills onto the desert near by, and nighttimes it washes back again.

"'This sand,' says the Colonel, spitting a lot of it out and gasping, while we were putting on the tenth green, 'is the most valuable glass-making sand in the world. They send all the way from Europe for it, to make stained-glass windows for churches.'

"'Uh-huh,' says Willis. 'Where's the water hole on this course?'

"'There's a good water hole on my ranch not more than three or four miles from here,' says Old Man Thompson. 'If you were to decide to stock up with cows, I'd make an arrangement with you so your cattle could get water there.'

"'Look here,' I said, 'you two are talking about different kinds of water holes. Mr. Thompson means a water hole where cows drink, and Mr. Hitchcock means a water hole where golfers lose balls.'

"'Either would suit me right now,' says

Your reading problem solved—

CHARLES WILLIAM ELIOT, LL.D.

Forty years President of Harvard University, Editor of the famous 5-Foot Shelf of Books (The Harvard Classics)

"Your arrangement of passages for daily reading from the Harvard Classics has resulted in a very enticing bill of fare. I doubt whether any other device would reveal as well the extraordinary variety of material in the collection."
WILLIAM ALLAN NEILSON—President of Smith College.

"It is the Reading Guide, which in my judgment makes the ownership of a set of The Harvard Classics the greatest single source of enjoyment, as well as the chiefest source of self-benefit, that anyone can possess."
GRANT OVERTON—Distinguished Author and Critic.

"'Fifteen Minutes a Day' is indeed a valuable adjunct to The Harvard Classics and I constantly consult it with profit and delight. Here is a college education within the reach of everyone—knowledge stripped of its dull components and presented with attractive succinctness."
H. C. WITWER—Prominent Fiction Writer.

"As I ran through that inimitable reading guide, 'Fifteen Minutes a Day' I pictured three types of women who would find it invaluable—the woman of leisure with her multiplicity of social obligations; the woman of business whose mind must be keen to meet both professional and social competitions; and the club woman who must study constantly or fall behind her co-workers."
ANNA STEESE RICHARDSON—Author of "Standard Etiquette."

(A page from the new Daily Reading Guide)

WHAT are the few great books really worth reading? How shall a busy man or woman find them? This problem has been wonderfully solved for you by Dr. Eliot from his lifetime of reading, study and teaching. He has made it possible for you, by reading little, still to be well read.

His influence on America cannot be calculated, but that it was prodigious must be admitted when one considers the thousands of men who passed under his eye and hand in the 40 years he was President of Harvard. But that he reached far beyond the Cambridge walls may be seen in thousands of home libraries throughout the land. Many denied any other guidance have gained a speaking acquaintance with the world's classics through Dr. Eliot's Five-Foot Shelf.

And you need only turn to the Daily Reading Guide to find reading selections from the Five-Foot Shelf appropriately assigned for every day in the year. Each can be read in about 15 minutes with leisurely enjoyment. The Reading Guide carries a step farther the expert selection and guidance of Dr. Eliot.

The Five-Foot Shelf of Books free you from the limitations of your age, of your country, of your personal experience; they give you access to all ages, to all countries, to all experience. They take you out of the rut of life in the town you live in and make you a citizen of the world. They offer you the companionship of the most interesting and influential men and women who have ever lived; they make it possible for you to travel without leaving home, and to have vacations without taking time from your work. They offer you—if you will only accept it—friends, travel, the knowledge of life; they offer you education, the means of making your life what you want it to be.

DR. ELIOT'S FIVE-FOOT SHELF *of* BOOKS
(*The Harvard Classics*)

Pleasure, self-satisfaction, entertainment and at the same time the delight of mental growth—these are the ideas behind The Harvard Classics. In all the world there is no other such grouping of the few imperishable writings which picture the whole progress of civilization. Send for the free booklet which gives Dr. Eliot's own plan of reading and tells how he has put into the Five-Foot Shelf "the essentials of a liberal education."

Since 1875, P. F. Collier and Son Company has published good books, and furthers the cause of good reading by offering you the plan which enables you to pay for the books while you are enjoying them.

Since 1875 COLLIER Good Books

You owe it to yourself to act promptly!

Mail this coupon for the famous FREE book

P. F. Collier & Son Company, 250 Park Ave., New York City

By mail, free, send me the booklet that tells all about the most famous library in the world, describing Dr. Eliot's Five-Foot Shelf of Books (The Harvard Classics), and containing the plan of reading recommended by Dr. Eliot. Also, please advise how I may secure the books by small monthly payments.

a cowboy, very tactless, I thought, blowing sand out of his nose.

"'Isn't there any water on this place?' asks Willis.

"I'd been dreading that question. I'm going to trust you with a secret, now, that I wouldn't tell anybody but a close friend—the truth is, there *isn't* really much water on that land of mine. There; it's out now, and I feel better! I'm so candid and honest by nature that it worries me to conceal anything. Some former owner drove a well near the house, and there's a feeble little trickle of water can be pumped out with a gasoline engine. There's as much gasoline goes into the engine nearly as water comes out of the well. When I first got the place, which I took on a bad debt I never could have collected anyhow, I rigged up a shower bath back of the 'dobe house. But when you turn the shower on, the last couple of years, nothing comes out but spiders, ticks, and ants; and now and then a little baby centipede.

"The Colonel, stung to desperation, pointed to a streak of white sand at the top of one of the hills, and began to orate about the perpetual snow of the mountains, and how it fed the perpetual springs.

"'I don't see any springs anywhere,' said Willis, with his back to the way the wind was blowing from.

"'Turn round!' yells the Colonel; and we all looked where he was pointing. Five or six horned toads, that had been blown in from the desert with the sand, were sitting on a rock, and they began to hop away as the Colonel approached them.

"'You see those frogs?' says the Colonel. 'Just follow the frogs and you'll come to the springs and marshland!'

"And while we played the rest of the way out of that canyon, and its perpetual sand-storm, the Colonel wheezed and spluttered and sold the property on frog legs, figs, and oranges.

"Before we played the fourteenth hole, which is located at the corner of Date Palm Place and Waterlily Close, we rested a little and got the sand out of our eyes with water from the canteens. Then we teed up and drove off for the fifteenth hole. The fifteenth hole is like this: First, you got to go over a little hill, which has a flat place on top of it, and then down the other side to the green. You can't see the green, which is at the corner of Almond Street and Narcissus Boulevard, until you get to the top of the hill. There's a kind of a little depression in the flat place at the top of the hill. It's rocky and warm up there, and some days quite a few of my snakes are lolling around in order to get caressed by the sun.

"JUST as we got to the top of the hill, 'Crack!' went a rifle somewhere, and 'Ping!' went a bullet over our heads.

"Without any conference among us, we all flung ourselves with one accord into the dip in the ground, just as there rang out one of those wild, unearthly yells, fierce and mournful, that nobody but an Indian has ever been able to tear out of his vocal cords.

"I risked an eye over the edge of the hollow we'd all dropped into. It was who I thought it might be—Mojave Dave. Dave was down on the putting green, with a chuckwalla he had been eating in one hand, and a rifle in the other, doing one of those dances you usually got to pay money to see. He'd eat some chuckwalla, and then he'd yell another yell, and then he'd cut another caper, and then he'd let loose another bullet; and it wasn't a civilized sight at all for anybody to see that you were trying to sell property to.

"'Where did old Dave get hold of a rifle?' asked one of Mr. Thompson's cow hands, who had also been risking an eye.

"'It's mine—the old varmint's made himself a Christmas present of it,' said Mr. Thompson, clawing at a tick that had worked its way into his skin through his whiskers. 'Don't you boys remember I missed my rifle a couple of days ago, and five boxes of ca'tridges?'

"'Five boxes—huh! That's two hundred and fifty shots Dave's got,' says the cow hand.

"DAVE, he let out another yell and another bullet. It hit a small stone, and the stone jumped, and ricocheted, and hit Willis in the nose, and the blood spurted. And just then I heard a familiar kind of a buzzing somewhere near, and take it all in all it didn't look like such a good sales argument for my property. We didn't dare to stand up, or even lift ourselves high enough to crawl away down hill, the bullets were coming so fast and steady just an inch above us; we had to lie there among the insects while the pebbles danced around us.

"'Those golf balls must have bounced down at Dave over the hill, while he was eating his dinner,' said Old Man Thompson. 'You boys should have yelled "Fore."'

"Dave is really a nice old fellow, and I never heard of his acting that foolish, excited way before. The only thing the matter with him is that he gets loco spells.

"Dave lives mostly in the desert, and what he lives on is chuckwallas and canned peaches. You don't know what a chuckwalla is? Well, it ain't like a peach. He inhabits my place a good deal because of there being more of his favorite game animals on it than any place of similar size in the world.

"His canned peaches he gets mostly from Thompson and me. Old Dave is loco on the subject of owning all the land there is, anywhere. He's a Mojave, but he don't live with any tribe or village; and he says he's the only Indian left that never had anything to do at any time with a government reservation. He says the Indians once owned the whole country, and him being the only ungovernmented Indian remaining, why, naturally, he is the heir to everything everywhere.

"But Dave is usually right reasonable about it, too. He'll trade. He sells the land every so often. About every six weeks Thompson buys his ranch from Dave all over again with another can of peaches, and I guess I've purchased my place from him fifty times in the last five or six years. Once I asked him why I had to keep on and on buying it from him.

"'Dave,' I says, 'you ought to stick to a bargain when you make it. . . . 'Huh!' says he. 'No! Dave no stick! Dave heap like white man!' But Thompson and I like him, and we were both surprised to see him misbehaving this way. Before this his wrongs had only made him sort of sad and dignified, and not active.

"I saw Fred Parsons reach for his gun.

"'Here,' I said, 'don't you shoot at Dave! He's a friend of mine. He's got

WHO is the White Fireman? He is used in this advertising to symbolize loss-prevention engineering service—a nation-wide service, supported by insurance companies, having for its purpose the reduction of loss-hazards. Consultation on proposed structures, inspection of property, testing of materials and equipment, and many other kinds of technical assistance comprise the work of this service. Ask your North America Agent.

North America Agents are listed in the Insurance Sections of classified telephone directories under "INSURANCE CO. OF NORTH AMERICA"

The White Fireman goes on the night watch

FIRE danger never sleeps! Tonight it is lurking in thousands of stores, warehouses, office buildings, apartment houses, hotels, factories, institutions and schools—awaiting its chance to *destroy* while the world slumbers.

Long ago the White Fireman recognized in the night watchman a potential tool for fire prevention work. He fathered the idea of establishing schools where night watchmen might be trained to meet fire emergencies with alert, intelligent, effective action.

Today, in scores of cities, such instruction courses are being conducted—by fire departments, by Chambers of Commerce, by business associations and other civic bodies, and by underwriters' organizations. Thousands of night watchmen are availing themselves of this valuable educational service. Thousands of property owners are being benefited by it.

And this is but one of the hundreds of activities promoted by the White Fireman in his never-ceasing efforts to reduce America's fire loss.

Byrd Antarctic Expedition carries Sergeant's Dog Medicines and Dog Food exclusively

(BELOW) *Our Veterinarian With One of Byrd's Sled Dogs*

(ABOVE) *Loading Byrd's Huskies Aboard Ship*

ONE hundred Eskimo dogs are a vital part of the personnel of the Byrd Antarctic Expedition. They'll draw the sleds to carry supplies to the many "caches" upon which the life of the Expedition depends.

Unless the dog-teams are in splendid condition, the great adventure will fail. The dogs *must* be kept healthy.

With his usual foresight, Commander Byrd made exhaustive tests of various dog medicines and dog foods—and then, chose Sergeant's Dog Medicines and Dog Food exclusively.

Keep *Your Dog* Healthy

Dealers everywhere sell the complete assortment of Sergeant's Dog Medicines and Dog Food carried by the Byrd Expedition. Sergeant's Medicines are backed by fifty years experience. You can depend on them. *But don't wait until your dog is sick.*

Famous Dog Book *Free*

We urge you to get your free copy of Polk Miller's famous Dog Book. In clear, non-technical language it tells the symptoms of all dog diseases and the best treatments for each. A "Symptom Chart" makes it easy for you or your dealer to diagnose your dog's ailments.

Expert Advice Free

Our expert veterinarian cared for Byrd's Huskies before their departure. He will answer, without charge, questions about *your* dog's health. Write fully. Sergeant's Dog Medicines and Dog Food are on sale at dealers everywhere. If you cannot obtain them or the Free Dog Book, write us direct.

the heart of a child. He'll be all right as soon as those ca'tridges are all shot away.'

"Fred took a 'Bang! Bang!' over the lip of the depression we were lying in; and in a second I heard something thrashing about among the pebbles.

"'Excuse me, Major Stacey,' says Fred, 'but I didn't have time to explain before I shot. I wasn't shooting at the Indian. I was just nicking that rattlesnake that had reared himself up there like he was going to kiss Mr. Hitchcock on the neck.'

"There was another whirring that made us all feel like we ought to rise from that little hollow. And some more bullets and dancing stones that made us feel like we better keep on lying down.

"'You take my gun, Mr. Thompson,' says Roy Peters, handing it over; 'you can probably shoot better than I can.'

"So Old Man Thompson lay on our right flank shooting the heads off of rattlesnakes when they lifted above the edge of the hollow, and Fred Parsons lay on the left flank doing a similar humanitarian work. The pebbles poor old Dave kicked up bounced amongst us, and his bullets whined above us and spattered around us, and I saw a couple of buzzards idling about above as if they were looking for business opportunities, and on the whole it was one of the most nervous and irritating golf games I ever implicated myself in.

"Just as I was wondering how Willis was enjoying all this, I heard him laugh.

"'Say, Colonel Sanford,' he says, 'just exactly what is the advantage of *Indians* on a place like this?'

"'Advantage!' yells the Colonel. 'Indians!' And in his excitement he sat up to orate. One of Dave's little Yuletide greetings combed his chin-beard, and he lay down again. But from where he lay, he started the most outrageous selling talk I ever listened to.

"SELL? What did he sell? Why, sir, he sold that Indian himself! Sold him while he dodged his bullets! Sold him romantic and sold him commercial! I only wish I could think that man Sanford is as honest as he is talented. He lay there in the hot sand with ticks in his neck and horse flies under his collar and tried to turn that total loss that was plunking bullets at us into a glorious asset!

"'Mr. Hitchcock,' he yells, above the din and rattle of the bombardment, 'Mr. Hitchcock, you are fortunate in witnessing the last Indian uprising this country will ever see, fortunate in being in the midst of a historic moment. . . .'

"He smashed a centipede with his boot and discouraged a Gila monster with his mashie, and went right on. . . .

"'Chief Bear Skin down there is greeting us with all the beautiful, untamed enthusiasm of his race, but he is really happy! Happy because he and his tribe have consummated a deal with Major Stacey whereby the Major is to take charge of marketing all the Indian products. . . .'

"His broad hat floated away on the wind of one of Dave's bullets, for he'd raised his head too high again.

"'Indian products,' yelled the Colonel, as his hat left him. 'Blankets, metalwork, beads, pottery, baskets. There's a fortune in it, Mr. Hitchcock, there's a fortune . . .'

"A flying pebble knocked his false teeth out, but he rescued them from a chuckwalla, wiped them on his sleeve, put them in again, gulped, and went right on. . . .

"'This fortune, Mr. Hitchcock, will be yours! For we offer you the Indian contract with the land! All aboriginal rights and all riparian rights go with the property, Mr. Hitchcock, making it the most desirable purchase in all the Golden West!'

"Yes, sir; I wish from the bottom of my heart that man had probity to match his gifts!

"Suddenly, I got an idea. 'Dave,' I yelled, sticking up my head at the risk of getting my toupee mussed up. 'Dave! Peaches! Peaches!'

"Thompson caught the idea, too, and began to yell: 'Peaches, Dave, peaches!' And the rest of them joined in without knowing why they were doing it.

"Dave, he had a box of ca'tridges left, and he looked at 'em wishful. And he listened wishful to the cry of 'Peaches!' He stood doubtful for a minute, but the desire for some dessert after his dinner conquered his sense of his wrongs, and he dropped his gun and came towards us. We all got up.

"'There's four cans in my shack,' I says to one of Thompson's cowboys. 'Take him over and give them all to him!'

"JUST then Fred Parsons let out a yell. 'Great Jehoshaphat!' he said, and pointed.

"We looked where he was pointing and there was the city of Los Angeles!

"A mirage, like we sometimes have in the desert countries, was showing it to us as if it were only five or six miles away—this wonderful city, which will have between two and three million inhabitants the next census count if we ain't crooked out of it somehow, with all its skyscrapers and spires reaching up into the blue, unclouded heavens! Near! Why, it looked so near you felt like you could reach right over into Hollywood and put your hand onto the new First National Bank Building or John Barrymore.

"Colonel Elwood B. Sanford stuck out his hands towards it like he had created it himself and loved it.

"'Look!' he said, with that magnificent gesture. 'The city is coming nearer to this fine suburban development every day! From the corner of Almond Street and Narcissus Boulevard, where we stand now, a new car line will soon run right down to the center of Los Angeles proper! It will be but fifteen minutes from here to the Southern Pacific Railway station.'

"I've heard men sell almost everything; but he was the first optimist I ever knew personally who tried to sell a mirage. And yet, in the midst of my admiration, there crept a little doubt. He had genius, but genius can blunder. It takes genius to stand in the midst of a passel of dead rattlesnakes, with a loco Indian beside you, and buzzards drifting inquisitive towards you, and sell these critters as desirable suburban improvements for a city forty miles away. It's genius, but is it sound? Is it judgment? For you can only sell a mirage as long as it lasts.

"'I didn't know it was so near,' says Willis.

"'I brought you around the long way purposely,' says the Colonel. 'I wanted you to get a look at the scenery, and I was saving this as a surprise for you.'

"But sure enough, it was a blunder. It

"Terribly scalded—

yet not a scar—with Unguentine"

HEARTBREAKING sobs . . . How cruel, the pain of burns and scalds! How dreadful, the menace of infection, the threat of hideous life-long scars!

No true mother can take this risk. Let Unguentine, the famous *antiseptic* surgical dressing, protect your child.

Unguentine miraculously soothes the pain; promotes rapid, normal healing; safeguards against infection, wards off scars.

Keep Unguentine always in your bathroom medicine cabinet, and extra tubes in kitchen, office or workshop, automobile. Buy Unguentine today.

At your druggist's—50¢. Send for free household manual, "What To Do," by M. W. Stofer, M. D. The Norwich Pharmacal Co., Norwich, N. Y. In Canada, 193 Spadina Ave., Toronto.

"I WENT TO THE 'PHONE and my elder boy started to put little Harold in his bath before it had cooled. His tiny feet were so terribly scalded way up above the ankles . . . I covered them with Unguentine. They're healing nicely now and without a scar."

Now the new Unguentine Soap for tender skins

was super-salesmanship, but it wasn't sense.

"For right in the midst of the most eloquent suburban lot sale I ever harkened to, that dream city winked sarcastic at us—and faded out.

"At the same moment a chill came out of the canyon and I heard an owl screech in the hills and a coyote began to sing somewhere a long ways off in an arroyo. Willis laughed, and then he shuddered a little, too; and if I ever saw the face of a man that felt over-sold, his was it. We all went back to the shack for supper, me wishing every step of the way the Colonel had concentrated on oil and minerals. Oil always seems reasonable and sound and conservative.

"I hope you're my friend. I couldn't bear to tell the rest of this to anyone that wasn't full of sympathetic friendship.

"Well, after supper a trifling little ten-cent-limit poker game got itself started; and I wish I could remember for sure whether it was Colonel Elwood B. Sanford that proposed it. Anyhow—

"You've got a guess as to what that chill wind blew out of the canyon in the way of luck. I state with shame that it was I myself who suggested that the limit of this game be raised to a quarter. It was Old Man Thompson that wanted it hiked to fifty cents. It was Roy Peters who thought it ought to be a dollar limit after-while. I don't remember that this Willis Hitchcock ever suggested any hiking at all. It was Fred Parsons who said he liked stud poker better than draw.

"THE day after Christmas, when this game started, was a Wednesday. Along towards Thursday evening Thompson left us, with my car, and when he came back he brought two cases of something he said was drinkable, and he found us playing four-dollar stud with an eight-dollar bet on the last card.

"On Friday, the cowboys of the Thompson outfit, who had long since been cleaned out, thought they'd better bid us *adios*, and go and look after cattle a little.

"What I especially remember about Saturday is that some time that day the limit of this game faded away just like that mirage had. There wasn't any limit any more. By Sunday evening this Willis Hitchcock had a check for everything I had in the bank, two building lots in Pasadena, the car I come up there in, another brand-new car in a garage in Hollywood, a half interest in a store building in Beverly Hills, an I. O. U. for the value of a hundred head of cattle that was once Thompson's, everything that Colonel Elwood B. Sanford said he possessed, and a half interest in that very property we were sitting playing on and had tried so hard to sell him. I say nothing of further I. O. U.'s *ad nauseum*.

"You know what I think, mister? I think, somewhere about the middle of that game, or nearer its start, that Sanford person deserted my flag and made common cause with this Willis Hitchcock. And later went and shared what this Willis Hitchcock took from me. The way some of those hands was dealt and played makes me more and more suspicious the more I think 'em over.

"It was the day after New Year's. Willis said he guessed he'd have to bid us good-bye, and he went down to the road and climbed into the car I'd come up there in, and then he says:

"'Major, would you like to cut the cards just once more before I start? One half of this place against the other half?'

"We cut. I hoped I'd lose—that darned place and trying to sell it had cost me so much money that I wanted to be rid of it all and never hear of it again. But I won his half of it back, and that made me wonder if he wasn't a slicker with cards. There I was, stuck with it all once more!

"'Well,' says Willis, turning on the ignition and starting the engine, 'I certainly have enjoyed my little golfing trip up here. And when any of you boys come down to Tia Juana you must make a point of looking me up.'

"'Tia Juana!' I said. 'Aren't you from the East?'

"'Why, no,' says Willis. 'I was born and brought up right in Los Angeles.'

"'Aren't you a retired banker?' I asks.

"'Yes,' he says. 'I am. I mostly fool around with horses and other games now. It's been quite a while since I had anything to do with a faro bank. Good-bye, boys!' And with that he let in the clutch and was off.

"I can't find it in my heart to think that Colonel Elwood B. Sanford knew he was a professional gambler and planted him on me from the start. If so, why would he have tried to sell that land so hard? And he really tried—I could tell. No, the thought of turning and rending me came to the Colonel after that game got started."

Major Stacey fell into a sad silence, which I respected. He rolled himself another cigarette, and looked bluely at the blue smoke. Presently, he spoke:

"There's just one little thing that might be construed as consolation. Colonel Sanford owns half that land now. Us losers had a few consolation rounds, and he won it. And some day he'll go up there with another prospect, and fall off a cliff, or get stung by a rattlesnake, or something. He will, if there's any justice in the universe, on account of the trick he played me."

One of the Japanese bell-boys came out of the hotel. "Telephone for you, Major Stacey," he said.

THE Major went in, and it was ten minutes before he returned. There was a queer look on his face, as if he didn't know whether to be glad or sorry.

"That phone call was from Old Man Thompson," he said, "and I'm trying to figure whether there's justice in the universe or not. This morning one of his hands slung a stick of dynamite at a family of rattlesnakes in the bottom of that canyon, and the explosion opened up an oil gusher—and that old grafter, Colonel Elwood B. Sanford, owns half that oil!"

He sat down, and frowned, and smiled, and smiled and frowned. Finally he said:

"It's terrible on a man like me, who has always led a life of honesty and idealism, to be hooked up as a business partner with an old crook like Colonel Elwood B. Sanford! I wonder if I couldn't buy his half of that property right now—before he finds out about the oil."

And he went in to the telephone booth again.

"This Professional man's $1000 grew...safely...to over $40,000"

Fred I. Pugsley, Cashier of the Westchester County National Bank, Peekskill, N. Y., tells the story of two professional men—and the dramatic contrast in their present fortunes.

SOME years ago," said Mr. Pugsley, "a young professional man came to e for advice—he was a depositor in our nk—on how to build a competence for mself.

"He was able in his profession, and rned a respectable income. I recom-ended a good $1000 bond, safeguarded sound management and history of rnings. He bought it—and promptly rrowed $1000 to buy another bond with.

"For 15 years, he always owed us oney. But in those 15 years this pro-sional man's $1000 grew with constant ving and investing—safely—to over 0,000.

"He presents," continued Mr. Pugsley, remarkable contrast with another ung man—in the same profession, and out his equal in ability—who wouldn't it, who wanted to make a 'killing.' ying bonds—for him—was too slow a y to make a fortune. So he plunged re, took a 'flyer' there—and he's still rying the worry.

"With every new venture into specu-ion, he starts from scratch. The result vays ends disadvantageously. The last ne we met, he told me, 'Mr. Pugsley, vish I had taken your advice a dozen rs ago.'"

LIKE ALL BANKERS worthy of the h position their communities accord

"One of them took my advice."

them, Mr. Pugsley considers that to preach safety in investment is one of the moral obligations of his profession. In every community, leading bankers urge upon their customers to put safety before any other consideration.

Good yield, of course, is important, though never should it be permitted to outweigh the advantages that go with a complete safeguarding of both principal and interest.

The banker knows, too, how important diversification is. Yet this he recognizes as essentially a problem of adaptation of specific types of securities to individual needs. Here the professional knowledge and experience of the banker are of inestimable value to the investor.

Indeed, the selection of the right type of bonds is, for the average investor, too complicated a problem to be decided by himself. It is best to consult a banker, or a high grade investment house, before he buys.

Over 900 bankers, in communities that range from large metropolitan cities to small trading centers, choose bonds from among Straus offerings for their own reserves and to recommend to customers for investment.

As a help to all who are interested in studying the principles of sound investment, S. W. Straus & Co. has prepared an interesting, easy-to-understand booklet, "How To Invest Money." Every person seriously concerned in safeguarding his future should own a copy of this booklet. It will be sent without charge. Write for booklet F-1021.

Fred I. Pugsley, influential banker of Peekskill, N. Y., is President of the Westchester County Bankers' Association, and Cashier of the Westchester County National Bank of Peekskill.

Westchester County National Bank, Peekskill, N. Y., ded in 1833, is the oldest bank in Westchester County is recognized as one of the strongest financial institutions in the country.

The Drift Fence

(*Continued from page 53*)

Jim stepped closer and peered down at Curly.

"Well, Prentiss, have you had enough?" he asked fiercely.

Curly looked up. "Boss, I cain't say how it come aboot, but I'm shore licked," he said, and grinned.

"Did I pick this fight?" went on Jim, quick to grasp the situation.

"You shore didn't."

"All right. Are you going to threaten me with that nonsense about gunplay, or are you going to shake hands?"

CURLEY laboriously got to his feet. Something had pierced the armor of his stupidity. "I reckon I'll shake," he rejoined, and he took Jim's proffered hand.

"Aw, you're drunk," growled Hack Jocelyn, in disgust, with a hard eye on Curly. "An' we had our money on you!"

Bud Chalfack essayed to rise, a task by no means easy, owing to the billets of wood that surrounded his feet.

"Bud, you better stay there, because if you get up I'll only have to knock you down again," said Jim menacingly.

"But *I* wasn't fightin' you. Thet was Curly. You're bigger'n me an' I didn't do nothin', except give you away. An' if you hadn't soaked me I'd hev told the fellars—"

"If you tell any more I'll beat you into jelly. And I'll do that anyhow unless you apologize."

"Aw! Fer callin' Molly Dunn a little hussy?"

Jim looked a grim affirmative.

"All right, boss. I crawl. But I didn't mean any insult."

"You didn't?—Say, you little dumbhead! Didn't you lie when you said you saw me hug her?"

"Boss, I think I was sober *then*," replied Bud gravely. "I seen you hug her. You lifted her clean off the floor. She whacked you one—an' when you let her down, she went fer you sudden-like an' kissed you."

Jim faced the silent, puzzled cowboys. He believed for once he had the upper hand.

"Boys, Bud was drunk last night. He has heaped disgrace on me and insulted a fine girl."

Bud took violent exception to this, as was manifest from his face and actions, without the speech that followed.

"Boss, it ain't no disgrace to hug a gurl in Arizonie. An' if it happened to be Molly Dunn you'd shore make this outfit proud. 'Cause Molly Dunn has handed the mitt to me an' Lonestar. An' she shore set Hack Jocelyn down cold an' hard. Hack is plumb crazy over her."

"But you called her a hussy!" thundered Jim.

"But, boss, I didn't mean thet in no insultin' way," protested Bud. "Molly's a little wildcat. She has shore made this Diamond outfit sick. Why, me an' Lonestar was flirtin' with her down at West Fork, an' we never knowed she was Slinger Dunn's sister. . . . Boss, I take thet 'hussy' back."

"Very well, in that case I'm sorry I misunderstood you," said Jim, and offered his hand to Bud.

Jeff's noisy, banging summons to supper ended the incident. Jim imagined an almost imperceptible transformation in the air of the cowboys, except in Jocelyn and Winters, who were surly and uncommunicative.

Jim sought his bed early. But he did not find slumber coming easily. He believed he had stumbled on a way to get the best of the Diamond outfit. These simple, elemental boys respected only achievement. They did not really care in the least who a man was. It was what he could do! And Jim believed he could whip every last one of them.

But as for Molly Dunn! When Jim let clamoring thoughts of her dominate his consciousness, his exultant glee died and his heart sank like lead in his breast. So some of these tough cowboys knew her! Had dared to approach her! The idea made Jim's blood run hot and cold. Still, Molly could not have helped that, if these cowboys had discovered where she lived or any place she frequented.

As he lay there, his face turned up to the dark canopy of pines, through which starlight filtered, he realized he was infatuated. That was as far as he grasped truth. Molly was an enigma, but only that because of the allusions of Bud Chalfack. Then a staggering thought struck him. Perhaps Bud Chalfack had lied about his interpretation of the word 'hussy.' Bud was a smooth-tongued, crafty cowboy. Jim had observed a hundred instances of his diplomacy with his comrades. He was the brainiest of the lot.

The thought of Bud's trenchant remark was sickening. If these cowboys actually knew Molly Dunn, if they had ever been in her willing presence—especially that hard-lipped, veiled-eyed Jocelyn—it would be for Jim no less than a calamity. Because he would at once have to turn his back on romance. Then suddenly he recalled Molly's shy, swift kiss—timid if there ever had been a timid kiss—and later her sharp retort that he had been the first ever to have that from her, and loyalty and love leaped to her defense. There then the battle raged in Jim's mind—between trust and gossip, between romance and realism, between faith and unfaith.

MOLLY DUNN filled the bucket at the spring and set it down

She had been home from Flagerstown exactly fifteen days, and they seemed years. All had changed. Her very identity was not the same. If she had ever had any capacity for happiness, it had fled.

She looked at the old wooden bucket. She had carried it as long as she could remember, and that was as far back as when she had been so little that she could scarcely lift it. And the spring—all her life she remembered that. Once it had been an unfailing source of wonder and gladness. It was the biggest and finest spring of granite water in all the Cibeque Valley. It roared out from under a mossy cliff at the head of a shady glen, as large as a room and as deep as a well.

Many rocks and drooping ferns lined the banks; maples and sycamores leaned

Have you *heard* the new Kellogg cereal?

So crisp you can hear it *crackle* in the cream

RICE KRISPIES is the new cereal that's attracting so much attention. It's surely different!

Nourishing rice. Has a flavor like toasted nutmeats. And as for crispness—it crackles out loud when you pour on milk or cream!

Order a package for breakfast tomorrow. You'll surely surprise the family! Great with fruits or honey added.

And don't forget lunch. Rice Krispies is a fine suggestion. Give the children some for the evening meal. So easy to digest.

Rice Krispies make wonderful macaroons and candies. Put them in soups. Serve them buttered, like pop corn.

Phone your grocer for a crisp red-and-green package. Rice Krispies are so good you'll want to eat them right out of the carton.

Made in the famous Kellogg Kitchens at Battle Creek by the Kellogg Company—world's largest producers of ready-to-eat cereals. Makers of Kellogg's ALL-BRAN, *Corn Flakes, Pep Bran Flakes, Krumbles, Kellogg's Shredded Whole Wheat Biscuit, also Kaffee Hag Coffee—real coffee that lets you sleep. Other plants at Cleveland, Ohio; London, Canada; Sydney, Australia. Distributed in the United Kingdom by the Kellogg Company of Great Britain. Sold by Kellogg agencies throughout the world.*

VACATION

above all times is just the time for COMPTON'S

FOR here in COMPTON'S is all the knowledge in the world made as interesting as a story book. And here in vacation-time are all the children in the world released from school and with all their natural interests aroused.

They are in the parks, they are in the country, their eyes are seeing new things, their ears are hearing new sounds, their minds are fairly thrilling with new impressions.

They want to know about all these new things, and COMPTON'S tells them. Tells them in terms of their own understanding, and so not only fills them with greater knowledge happily gained, but inspires them to finer character-building and surer leadership.

Just try COMPTON'S for your children this vacation-time and see how naturally they take on this deeper sense of character and this broader sense of leadership when they return to their classrooms this fall.

Mail this coupon now, and we will send you a complete sample section of the wonderful Pictured Encyclopedia for Children, together with our FREE Questionario Game, which is a wonderful mental test of every child at every age. Our Educational Director will also send you full information as to how you can get this wonderful set of reference books for your children for as little as a first payment of $3.50 down.

Here is the coupon. Mail it now and solve your school problems in vacation-time.

☐ Pre School ☐ Grade School ☐ High School

over the amber water, letting only gleams of sunshine through; huge pines and spruces rose from the bank above to tower high. Above the spring on a level bench were grass and flowers, and clean, flat, gray stones where Molly had played alone all her childhood, and dreamed away hours of her girlhood.

But she gazed about now with eyes hopelessly disillusioned, or else blinded by the trouble that had come to her. All because of the wonderful ride to Flagerstown—a white gown, a dance—and *him!* Molly had come at last to feel that she could never be again what she had been before that visit, and that she would be what he had mistaken her for or she would die.

Every day since her return home had seen a struggle. At first she had been hot and resentful in her humiliation. She had hated Jim Traft. She would be a worthy sister of Slinger Dunn. She would carry on so boldly with the riders that her name would become a byword on the range for—for—Molly did not know for what, but she would find out.

She would encourage that nice little cowboy of the Diamond—Bud Chalfack, whose name she had never known until the night of the dance. And she would flirt outrageously with Curly Prentiss. Indeed, she would no longer repel the advances of Hack Jocelyn, though she disliked and feared him. She would show Jim Traft that she could win his stuck-up cowboys and cast them aside, for Seth Haverly, and even for Andy Stoneham.

But opportunities for such conduct had multiplied and she had not availed herself of them. Seth had often been at her home with her brother Arch, but she knew why he came. And always Andy waylaid her when she went on errands to the village. On Sunday she had espied Hack Jocelyn riding up the trail from West Fork, and she had dodged into the brush.

She resented her own vacillation and was long in understanding. But as the days went by she had finally realized that she was terribly, miserably in love. Her amaze and scorn, her fury and contempt, her pride and her shame, her wretched attempts to sink under this malady and make of herself what Jim Traft must think her—all were of no avail.

Lately Molly had begun to soften toward Jim, and that change in her feelings had been the forerunner of dreams and remembrances and longings. Once she had surrendered to this sweet fancy, she was doomed. Before she knew it, she could no longer fight herself or the thought of Jim. So that a few lonely afternoons in the glen, a few nights lying wide awake in the dark loft of the cabin, had been her undoing. The shame of it made her more furious than ever, but she was helpless.

EACH morning for a week when she had come to the spring for water she had set the bucket down, to indulge in pondering, brooding thoughts. This morning they prevailed longer than usual. But at length she picked up the heavy bucket and took the trail home.

The trail led to the clearing, to the forty acres of hideous slash in the forest that Dunn had homesteaded twenty years before. The rest of the hundred and sixty acres consisted of timberland. Dunn had never "proved up" on his claim, and therefore had no patent for it.

Arch Dunn plowed the red field and planted the beans, and corn and sorghum and potatoes. He had spells when he stayed home and worked about the farm. But the last year or two he had left the harvesting of the crop to Molly and her mother.

The cabin, at the end of the clearing, fitted the scene. It consisted of two one-room log buildings, with a porch between and one rough-shingled roof over all. The shingles were moss-green in places and the logs were bleached. In the chinks between, sections of clay had broken out. The fences were down, the sheds built of uneven clapboards.

Altogether Molly viewed the homestead with gloomier eyes than ever. She carried the bucket into the kitchen end of the cabin.

"YOU'VE been gone long enough to dig a well," remarked her mother, with sarcasm. Mrs. Dunn was still young and good-looking enough to be jealous of Molly. She had come from a station considerably above John Dunn's and she was a bitter, unhappy woman. Since Molly had grown old enough to attract the attention of men, what accord had existed between mother and daughter had gradually been broken.

"That bucket is heavy an' it's a long ways," replied Molly.

"You used to fetch it in a jiffy. You met some cowboy on the trail."

"No. It's funny, but I didn't this mawnin'."

"Well, you must have fallen in the spring, then."

"Wisht I had," returned Molly flippantly. She went out and across the porch. Her father had gotten up and was slouching in his crippled way to the big blanketed chair where he passed his wakeful hours. Of late, Molly had seemed to see him differently, with pity and tolerance.

Dunn was a broken man, living in the past, ruined by some secret association with an infamous war between sheepmen and cattlemen, and devoured by passions that had outlived his enemies. Molly had affection for her father, despite the impatience and disgust which grew with the years. And of late, since her own trouble, she had begun to have some little understanding of her mother—of what it must have meant to be faithful to John Dunn all these years.

There flashed over Molly a consciousness that she could follow Jim Traft to the end of the world and slave her fingers to the bone for him. Then she laughed at her own imbecility. For her to aspire to be the wife of Mr. James Traft, gentleman tenderfoot from Missouri and the sole heir to old Jim Traft's land and stock—that was rather far-fetched and ridiculous. Besides, she did not do anything of the kind. But she could not control vagrant and perverse thoughts.

Here flashed another: This same Jim Traft had importuned her to let him be her sweetheart! Molly had a stronger, sweeter, more suffocating rush of emotion. What would become of her, if this thing grew? She must throw herself at Andy or Seth, or both of them, and they would kill this affliction. But could those louts do it? Molly divined they could not kill anything except her self-respect. And that, strangely, had become a pronounced thing. She

would not have it to contend with. Her pride—her vanity! All because she had been hugged by a handsome young fellow from Missouri! Molly let out a peal of ringing laughter, that made even her father take notice.

"Lass, you've been queer since you came back from Flag," he remarked, in his quavering voice.

"I feel queer, Dad," she replied. "I waked up from my backwoods sleep."

"Backwoods! You mean this heah homestead?"

"Never mind what I meant, Dad."

MOLLY plunged into one of her working spells. It could never have been said of her, at any time, that she was lazy, but she took streaks in which she was busy from dawn to sundown. Small as she was, Molly had strength and endurance. Her little tanned hands were pretty to look at, on the back; her palms, however, and the inside of her fingers, were hard and cut and calloused. They occasioned Molly pangs of regret, though she had never felt ashamed of the labor that had coarsened them. It was just that the vanity inborn in her rebelled.

She was vain of her little feet and trim ankles; and that was why she never went barefoot and barelegged any more. She would brush her hair until it crackled and shone with gold glints in its dusky splendor. But she could work like a beaver, and she did this day, preoccupied and sad most of the time, yet cheerful during intervals.

Toward sunset, while Molly was at the woodpile—one of her many accomplishments being skill with an ax—her brother Arch approached. This was an unprecedented action for him. Years before she and Arch had been like sister and brother, playmates, but that seemed long before he had taken to evil ways of the woods and had earned the sobriquet of Slinger Dunn.

"Molly, cain't you leave a little work around heah for me?" he complained.

She dropped the fagot she had picked up, and stared at him. What a handsome, shiftless, backwoods beggar! He had the build of an Indian. Horses had not warped his legs nor broken any bones. His soiled buckskin garments somehow suited him. For some amazing reason he had shaved the golden down from chin and lips, and his dark, lean face shone clean and smooth. Arch's eyes usually lost their piercing quality when they beheld Molly. Just now they were bearable.

"Arch, you shore ain't drunk?" she said, thoughtfully regarding him.

"No. An' I ain't sick, nuther," he replied. "Never you mind aboot me. But cain't I be civil without you gettin' sassy?"

"Shore, I hope so. An' now I know somethin' ails you, Arch."

"Set down. A fellar cain't talk in there," he said, jerking a sinewy brown hand toward the cabin. "Dad is out of his haid. An' Mother—wal, poor Mother raves if you so much as open your mouth."

"Poor Mother! Yes, an' poor Dad, too. . . . Arch, you said a lot."

"Molly, what chanct have we ever had to help make them different?" he queried, swallowing hard. "I never had no school-in'-a-tall. An' you—only a couple of years. What do we know? . . . An' before I was sixteen I was Slinger Dunn!"

Molly was so amazed she could not keep track of flying thoughts. One held, however, and it was that if awakening consciousness of heretofore vague things could come to her, it surely was possible for them to come to Arch.

"Arch, is it too late?" she whispered.

"Thunder, yes, for me. But for you, Molly—wal, mebbe it's not. I hope to Gawd it ain't."

"Arch, if you want to know, I'm as down in the mouth as you," said Molly.

"You have been queer lately, since you come home. . . . Moll, did anythin' happen at Flag?"

"A whole lot."

"Wal, tell me aboot it," he went on, with that wonderful flash of eyes.

Molly laughed. "So you can shoot somebody up?—No, Arch, you cain't ever help me that way."

"Is thet so? Wal, you never know. But all the same tell me."

"Arch, it was awful for me," she rejoined, unable to resist sympathy. "Mrs. See took me, as you know. She was lovely. Bought me clothes—an' oh! such a beautiful dress. She has fine friends in Flag. She introduced me. I was asked to help in a booth at the fair. . . . Well, it's like a dream now. A dream you cain't believe. I—I was the belle at that dance, Arch. Can you believe it? I was crazy with joy—at bein' taken for a—a lady. I must have looked one, Arch. . . . Then somethin' happened an' my heart broke."

"THEY found you out, Moll?" he queried shrewdly. "Thet you lived down in the brakes? Thet your dad was John Dunn? An' your brother Slinger Dunn of the Cibeque?"

"Yes, Arch, I was found out," she replied. "But I didn't go back on you."

"Shore, you'd never do thet," he said somberly. "You oughtn't to have gone to Flag!"

"Must I stick here buried in the backwoods all my life?" she asked passionately.

"Molly, thet stumps me. I reckon I'd have said 'Yes' a while back. But if you *was* made much of in Flag—if you *was* took for a lady, why, there's somethin' turrible wrong. An' it's with Dad an' me. An' with Mother, too, cause she's stuck to him."

"Arch, I am a Dunn, too."

"Moll, I come out heah to ask you a fool question. I see thet now. But I promised Seth an' I'll keep it. He wants to know if you'll marry him."

"Seth Haverly?—Heavens!—No!" she cried, aghast.

"I reckoned you liked Seth."

"Perhaps I did, once, a little."

"Wal, marryin' Seth wouldn't help none. Now you make me think, Molly, I'd be ag'in' thet. But you needn't never tell him. Andy Stoneham is a decent fellar, though. An', Moll, he's turrible sweet on you."

"That tobacco-chewin' lout!" exclaimed Molly.

"Who you gonna marry then—to git you out of this heah hole?"

"No one, Arch. You see that marryin' one of these Cibeque boys would only nail me heah. . . . An' the—the kind of a boy I—I—who could save me—wouldn't have me."

"He'd be a darn poor sort then," flashed Arch, with passion. "If I was sich a fellar as you mean I could swaller a lot for you, Molly. Don't fool yourself. You're good enough for *any* fellar."

His earnestness, his sincerity, touched Molly. She went to the woodpile and sat down beside him, meaning to thank him, to yield to this surprising sympathy in him, but all she did was to burst into tears.

"Wal, don't cry," he said, almost roughly. "Molly, I heah this Diamond cowboy, Hack Jocelyn, was seen in West Fork last Sunday."

"Yes. *I* saw him myself, an' I shore ducked into the brush."

"Ahuh. Wal, thet lets you out, if you're not lyin'."

Molly dried her useless tears and presently faced him. "Arch, I used to lie to you, about the boys, an' everythin'. But I wouldn't no more."

"Reckon Jocelyn hasn't rid down heah so often the last year fer nothin'. Molly, is it you?"

"Yes, Arch, it's me."

"Don't you like him?"

"I did at first. But not now. He's older. He's daid in earnest."

"Humph. You mean aboot you? In love with you? Wants to marry you, same as Seth?"

"Arch, he's in love all right, but he never said nothin' about marryin' me. An' of course, I wouldn't have him if he had."

"Wal, I should smile not!" ejaculated Arch. "Marry one of thet Diamond outfit? . . . But at thet they're some pretty decent boys compared to Jocelyn. . . . Moll, he an' me are aboot ready to meet up."

"Arch, you can't help me by killin' any more fellars," cried Molly, shocked at the significance of his words. "That's one thing against me—your bloody record. An', Arch, if you keep on—if you should happen to kill one of that Diamond outfit—well, I'll just go to the bad!"

He took that darkly, without a protest, as if consciousness was being driven home to a man inevitably lost.

"Wal, I reckon I want to tell you somethin'," he spoke up. "All this talk about marryin'. . . . I up an' asked Lil Haverly to marry me. I told her I'd turn over a new leaf an' go to ranchin' if she'd have me. An' she laughed in my face! . . . She'd let me be sweet on her, too, Molly, an' thet fooled me."

"She's no good!" retorted Molly, hurt suddenly and astoundingly conscious of her brother's pain.

"Wal, not much, mebbe. Anyway, it doesn't matter," he replied, sitting up. "Come. I'll help you pack in this wood."

MOLLY slaved and brooded the days away. On Sundays she accepted the calls of Andy Stoneham and other young boys.

Two of these Sunday afternoons were rendered exciting by the fact that the boys from the Diamond rode up and down the trail. Hack Jocelyn was one of them on both occasions. The other cowboy Molly did not know, though she had certainly seen the youngest one, frank and as rosy as a girl.

"Molly," said Andy, on the second of these visits, "you know thet cowboy Jocelyn belongs to the Diamond?"

"Shore, I know," replied Molly. "Is that a crime?"

"Wal, reckon 'tis; leastways some outfit's been buildin' the drift fence. Jocelyn has an eye fer you, gurl."

"He's very handsome and a[illegible]. Most all the Diamond boys are.

"Ahuh. Why doesn't Jocelyn brace in hyar then?"

"He aims to catch me alone, Andy. An' it's just as well you're heah."

"Much obliged. Glad I'm good fer suthin'," replied Andy, with sour humor. "But jokin' out of it, this fellar Jocelyn is up to tricks. Last night I seen him in Mace's saloon. He had money an' was spendin' it. Sort of stumped me to see Seth Haverly drinkin' with him."

"No, Andy!" exclaimed Molly, aroused. "Was Arch there?"

"Reckon not. Arch hasn't been around lately. Now, what's he a-goin' to say to thet?"

"Say! He won't say anythin'. But he's liable to do somethin'. Seth an' Arch are like brothers."

"Molly, around hyar Arch is considered a dangerous fellar, but one you can trust. Seth ain't so dangerous, they say, but he cain't be trusted. Now, we know thet Arch an' Seth, the other Haverlys, an' Hart Merriwell an' Boyd Flick, an' some others make up the Cibeque outfit. One or more of them, on an' off, rode fer the Coffee Pot, the Hash Knife, the Bar O, an' other outfits in the valley. But so far as I know not one of them is ridin' fer any outfit now—except their own."

MOLLY echoed his last words, and she caught the significance of his lowered voice and roving look around.

"It jest strikes me funny thet Jocelyn of the Diamond seems to be makin' up to Seth Haverly of the Cibeque. How does it strike you, Molly?"

"Not funny, you can bet," replied Molly, with a short laugh. "Andy, there's somethin' in the wind. I'm thankin' you for givin' me a hunch. Arch is strange an' sore lately. He's thet touchy aboot the Diamond boys an' their work I cain't get a word out of him."

"Ahuh. Wal, Molly, you can shore get them out of me," rejoined Andy solidly, as one who had hit upon a happy medium. "I heard folks talk aboot Jocelyn. An' I'll tell you what: If he keeps on ridin' down to West Fork it's gonna be plumb bad fer him."

"Oh—Andy," faltered Molly.

"Slinger will *kill* him," whispered Andy. "My own idee is thet Slinger might stand fer Jocelyn gettin' thick with Seth an' his outfit, fer after all this brother of yours is a lone timber wolf. But he'll never stand fer Jocelyn runnin' after you."

"Andy, I know he won't," whispered Molly. "But I've told Arch aboot it."

"Molly, air you shore you ain't interested in Jocelyn a-tall?"

"Yes, I'm shore. I was at first. Like a ground squirrel with a snake! But now—Jiminy, I'll run like a scared rabbit!"

"Thet's good if it's true. Will Slinger believe you? Molly, excuse me, but thar's folks who say you're meetin' Jocelyn on the sly, along the trail somewheres."

Again Molly suffered a hint of her status in West Fork. She passed by Andy's covert suspicion. What could he know of a girl's honesty? But she told him rather forcibly that at least her brother trusted and believed her.

"Ahuh. Wal, I'm glad. You know what a place West Fork is for talk. Wuss'n a beehive. An' the drift fence has shore stirred up trouble. Molly, do you know thet son-of-a-gun tenderfoot Traft is most clear to the brakes with his darned fence?"

"I—I—hadn't heahed," replied Molly, thrilling.

"Wal, he is. Most clear on the Diamond! Ole Enoch Summers says, "Tenderfoot the devil! Thet boy is Jim Traft over again, an' you two-bit calf-chasers hev gotta look out."

"Did Mr. Summers—say that?" gasped Molly.

"He shore did, an' to a whole storeful of fellars."

From that hour Molly was kinder to Andy. She relied upon him to fetch her news—the facts as well as gossip. And Andy, evidently sensing some change in her, accepted the part gratefully. Molly went to one of the Saturday night dances with him. It was an ordeal and she did not stay long, especially after she had espied Hack Jocelyn enter the hall. She was quick enough, and Andy helped her, to get out before Jocelyn saw her.

"Take me home, Andy," she said, nervously holding his arm.

"Wal, it's a huggin' bee inside an' a fightin' bee outside," replied Andy sardonically. "West Fork as she is an' always will be, I reckon."

The air was cool and sweet after the smoky hall. Molly was glad to turn off the street into the lane, and she held Andy's arm tighter.

"Molly, I ain't had a chanct like this in a coon's age," said Andy, as if stolidly realizing the opportunity.

"Andy, I'm afraid of Hack Jocelyn," replied Molly simply. "I *cain't* be your sweetheart. . . . Do you want me to be afraid of you, too? Afraid to have you take me home in the dark?"

He did not reply at once. Evidently the facts were hard for his slow mind to assimilate.

"Wal, now you tax me aboot it, I reckon I don't."

Molly regarded that as more than an answer to her question. Andy, too, like Arch, had unplumbed depths, in the darkness of which there must be good.

DRY, hot midsummer lay upon the Cibeque. In the shade of the glen Molly spent hours idle on a rock, watching the big trout lying still in the clear water.

Things that concerned the life of West Fork revolved uppermost in her mind. The drift fence, so dominant a factor now, was well out on the Diamond. In the eyes of the Cibeque folk young Jim Traft was a perfect hurricane for work. Conflicting stories about his working pace and his fights with his cowboys were rife about the village. More cattle had drifted down into the brakes this summer than ever before. Vague hints that they did not all drift there of their own accord filtered to Molly's ears.

Arch had been home steadily for a month, more morose than she had ever seen him. But he had driven Molly out of the bean-field and had harvested the beans himself. She tried not to see that he and the Haverly gang had cattle deals frequently. They drove cattle in from the brakes and down the Cibeque, small bunches and short drives that had a sinister significance to Molly.

She went back home through the woods, watchful along the trail, and as soon as she reached the house her mother sent her on an errand to the village. She hurried out back of the barn and slipped into the woods to cut across to the trail, sure that none of the riders with Arch had observed her.

The dusty village street was asleep. So was old Enoch Summers in his store. Molly made the necessary purchase, and made haste homeward.

When she reached the shady trail she went slower to regain her breath. At a thickly overgrown point, where the trail turned, a brown hand shot out from the green and grasped her arm. Molly was not the screaming kind. But she struggled with all her fierce young strength. It availed nothing, however, and she was dragged through the brush a step or two into a little clearing beside a huge, fallen pine. Molly was frightened but not surprised to look up into the dark face of Hack Jocelyn.

"HOWDY, sweetheart," he drawled. "I bin layin' fer you."

"Let go," said Molly, and she jerked so hard that she freed her arm. "What you want? . . . Did you have to drag me in heah?"

"Wal, there's some folks I'd rather not have see me," replied Jocelyn.

"My brother Arch, for one, I reckon."

"No. I'm standin' tolerable with Slinger. I was thinkin' of thet sneak, Andy Stoneham. He's got eyes an' he thinks too much."

"Well, what you want? Mother sent me on an errand. She'll be waitin'."

"Let her wait. Reckon I've waited often an' long enough. I had to see you."

"If you *had* to, why didn't you come to my home, like any decent fellow would?"

"I've had reasons, Molly. But I'm glad to tell you one of them ain't pressin' no more. I've quit the Diamond."

This had decided interest and surprise for Molly, though she did not voice it. She peered, however, up under the big sombrero, at the cowboy's handsome face. It bore signs of recent battle.

"I couldn't stand Jim Traft no longer," went on Jocelyn. "I bin layin' fer a chance to quit a month an' more. We had some words. An' it ended in a fist fight."

"Did he lick you?" asked Molly, unable to resist her swift curiosity.

"I reckon he did," returned Jocelyn ruefully. "He's a slugger with his fists, an' thet kind of fightin' ain't mine. I couldn't make him draw a gun while I was ridin' with the Diamond, so I just quit."

"Ahuh. Quit so you *could* make him?"

"Shore. An' I reckon that sounds good to you."

"It means—nothin' to me," replied Molly, lying with tight lips.

"What was this heah talk aboot Bud Chalfack seein' Traft insult you at the fair dance in Flag?"

"Mr. Jocelyn, if he did, that's my business an' none of yours."

Molly looked away into the forest, conscious of deep-seated pain.

"Good day, Mr. Jocelyn. I'll be goin'," she said, and moved away.

Like a panther he leaped at her, cursing under his breath. She was a leaf in his grasp and she realized it. He lifted her high, held her close, and it was only by contortions of her supple body that she escaped hot, fierce kisses on her lips. But they burned face and neck.

"You're stayin' heah—till I get through—with you!" he panted.

WHY FAMOUS MEN OF THE DAY USE BARBASOL

"I enjoy this par-shave . . . every day"

"With perfect ease and comfort, Barbasol makes the face all fairway. It takes strokes off the razor and gives the cleanest, quickest shave."

Johnny Farrell

1928 NATIONAL OPEN GOLF CHAMPION

Famous men are quick to recognize the best things in life. That's why they're famous. That's why mugs, brushes and messy lather are now in limbo. Famous faces are being shaved with Barbasol—the par-shave—every day!

There's nothing like it

You don't brush. You don't lather. You don't rub. You just spread on Barbasol with your fingertips and shave. It smooths the path of the razor that easily clips the beard (the toughest beard) at the skin line. And in a fraction of the usual time you're shaved. Your face looks clean and it will stay that way all day. The skin feels smooth, fresh, exhilarated. For Barbasol is a cooling, healing, refreshing lotion as well as the modern vehicle for shaving.

Your Face Says "Yes"

Tomorrow morning step into the bathroom with a tube of Barbasol. Do this: 1. Wash the face (leave it wet). 2. Spread on Barbasol (don't rub). 3. Shave—dry the face.

Barbasol

For Modern Shaving

No brushing—No lathering—No rubbing

WOMEN LIKE THEIR MEN

young looking, bright and keenly fresh looking. Men like to be this way too. New Barbasol Skin Freshener cools, revives, freshens. Douse it on the face—after shaving—whenever tired. Nothing better . . . you'll agree!

In three quick steps that take about as many minutes, you're shaved. Your face feels smooth and cool. And it looks as good as it feels. *It's the par-shave.*

Today—step up to the nearest drug counter and speak up. One tube of Barbasol. Two sizes, 35¢ and 65¢. The Barbasol Co., Indianapolis, Ind.

"Let me—down! I—I'll stay," choked Molly.

He let her slide till her feet touched the ground, but did not at once release her. Molly burned with more than shame. She could have killed him if she had not been so scared. All cowboys were violent and rude at times, but this one was a man with a cruel hand as masterful and relentless as if she were a horse. She must use a woman's wit or she might have infinitely more to regret. The place was secluded, lonely, so far from any cabin that screams would be useless.

"I reckon you'd better," he said, giving her a shake. "Molly, I'm through with the Diamond an' I'm throwin' in with the Cibeque. If you fell sweet fer Jim Traft, like them moon-eyed Flag girls, you can jest forget it. 'Cause I'm crazy in love with you an' I'm goin' to have you. An' you'll marry me as soon as I make the stake we—I'm figgerin' on."

"Marry you!—Mr. Jocelyn, you're takin' a lot on your haid," said Molly, aghast and astounded at his effrontery. "I'm thankin' you because a man cain't do any more than ask that of a girl, but I must say 'No.' I don't love you."

"Wal, if I know gurls, you'll change your tune soon as I make my stake!"

"Stake. What you mean?"

"Never you mind now. I want to talk to you aboot your brother. Accordin' to the Haverlys, he ain't got any use fer me. No reason, except I was on the Diamond an' thet I'm supposed to have been driftin' round heah on your trail. An' thet ain't no lie! Wal, you're goin' to set me straight with Slinger."

"Oh, I am!" quoth Molly. Her fear held her in abeyance, but she could not wholly suppress her leaping spirit. "If I know Arch Dunn that little job wouldn't be easy."

"WE—I—I've figgered it out," declared Jocelyn. "It's been goin' the rounds thet Jim Traft made a show of you at the dance. An' we'll see it gets to Slinger's ears pronto. Wal, you're goin' to admit it's true, an' tell him I quit the Diamond because of it. Savvy, sweetheart?"

"I savvy that you are a deep an' cunnin' hombre, Mr. Jocelyn," replied Molly sarcastically. Not to have saved herself another of his onslaughts could she have refrained from that retort. But Jocelyn's instant grin proved that he took it for a compliment.

"You can jest bet your sweet life I am. . . . An' now soon as you swear you'll tell this to Slinger—an', wal, give me a kiss—you can run home to your mom."

"I won't kiss you, but—I'll *think* aboot tellin' that to Arch," she replied, playing for time.

"I cain't let you go on thet, Molly," he said cheerfully. The idiot actually felt sure of her. And he began to roll a cigarette, a shadow of a smile on his dark, smooth face.

Molly averted her eyes, lest he read in hers the thought that was forming.

Once out of reach of his long arm she could get away. The cowboy did not live who could catch her on foot. Molly calculated distance and moment, while concentrating all her energy. Suddenly, like a flash, she ducked and bounded at once, under the brush into the trail. Jocelyn shouted and crashed through. But Molly darted away. She could run like a deer. Her moccasined feet pattered on the hard trail. He thudded heavily after her, soon losing ground. Molly looked over her shoulder to see that he might as well have been roped, for all the hope he had of catching her.

She sped on out of his sight, never slacking her swift pace until she reached the place she had cut across to avoid the riders. Once in the clearing she went slowly so as to regain her breath.

The fool! The hard-lipped cow-puncher—to think he could bully her into knuckling to him! But otherwise she welcomed the encounter. Hack Jocelyn had quit the Diamond. It was a stunning fact, against all precedent. He was making up to the Cibeque, and especially to Arch Dunn. Some deviltry afoot!

MOLLY sat down on a log to rest. And the gist of the complex situation burst upon her in a realization of menace to Jim Traft. That agitated Molly even more than Jocelyn's attack on her. Hackamore Jocelyn would kill Jim, and if he did not, Slinger Dunn or the Haverlys would. Molly divined it, shocked that it had not dawned upon her before, and her warm, pulsing blood turned to ice. Jocelyn had proved traitor to the Diamond. For that he would be welcomed by the Cibeque, though she doubted Arch's complaisance. An infernal scheme had been hatched and Hack Jocelyn was the prime mover in it.

And what did he mean by a stake? Molly understood the word to imply what riders called food or money that they hoped to get by some lucky or clever break. Jocelyn had certainly meant money, and no small amount. Molly racked her brains for a solution, which was not forthcoming. Then her mother, espying her on the log, called loudly. Molly hurried to the cabin.

"I declare, but you take long to do anythin'," said Mrs. Dunn harshly.

"Well, so would anyone if she got waylaid by a bully of a cow-puncher," retorted Molly.

"Who?" demanded the mother, with a keen look at Molly's heated face.

Instead of answering, Molly ran like a squirrel up the ladder to the loft that opened over the porch. It had two compartments, one above each cabin. That over the kitchen was a storeroom, and the other, over the living-room, was Molly's. It had a window at the far end, a rude contraption that had been put in by Arch. The gabled roof was high enough only in the middle for Molly to stand erect.

Since Molly had been a child this had been the only room she had ever had, but she preferred it to the living-room, where her parents slept and quarreled. Arch Dunn used to sleep on the porch below, and then Molly had felt safe, but for years now, most of the nights, only the pines and spruces had sheltered him. What furniture there was in Molly's boudoir was home-made, some of it put together by her own hands. Yet until Mrs. See had taken her to Flagerstown, she had been contented in this loft. But then she had been a good many things before that lamentable visit.

At any rate Molly kept her cubby-hole, as she called it, clean and neat, and fragrant with the scent of pine and spruce boughs, upon which she spread her blankets. She lay down there now and tried to puzzle a way through the maze of circumstances which seemed to have involved her.

Following her mother's call to supper, Molly heard Arch's slow, clinking footfall. When he wore moccasins he could not be heard at all.

"Where's Molly?" he asked.

"I don't know. She got huffy because I asked her a question an' flounced out somewhere," replied the mother.

"Some of your questions are shore irritatin'," said Arch. "What was thet particular one?"

"She came home red in the face and panting, and when I told her it had taken her a long time to go to the store, she said she'd been waylaid by a bully of a cow-puncher. Then I asked her, 'Who?'"

"Ahuh. I reckon the gurl's gettin' too big an' pretty to be alone on the trails," returned the son ponderingly. "Molly is no kid any more. You can bet I'm findin' thet out. I heah she beat them Flag gurls all hollow at the fair dance. I heah a lot."

"I never hear anything," complained Mrs. Dunn. "I'm stuck in this cabin from sunup till dark. I want to get away before I die on my feet."

Molly had heard such ranting of her mother's for years, but she was stunned to hear Arch reply that maybe soon they would be able to move away from the Cibeque.

"Arch! What've you done now?" queried the mother.

"Nothin' jest yet. But I reckon to make a stake soon."

"Humph. Call the girl to supper."

Arch stepped to the end of the porch and called: "Hey, Moll!"

Molly thought best to answer sleepily: "Yes, Arch. Heah I am. What you want?"

"Supper, you wood mouse," he replied, and he waited by the ladder to give her a slap and then lift her down.

"No kid no more! Moll, you're as heavy as a sack of beans."

"Shore, an' worth aboot as much," retorted Molly. "You're plumb interested in me lately, Arch."

"Yep. I am, more'n you'd guess," he replied. "You an' me are goin' to have a little confab after supper."

Molly looked straight into his piercing eyes, though she felt her face burn and her nerves quiver. However, she did not reply. She ate her supper in silence, which, in fact, was what they all did.

"Wal, sister, now you can have a walk with *me*," said Arch dryly, as he got up from the table.

MOLLY did not need to look at him again. She knew there was something in the wind but she felt only half frightened. Arch was a puzzle lately. She walked beside him, as he led her along the edge of the field toward the creek. When he got to the head of the trail where it led down into the glen toward the spring, he halted and said: "Reckon this is far enough. Who was the bully of a cowboy that waylaid you?"

"Hackamore Jocelyn."

"I reckoned so. Wal, what'd he do, Moll?"

"Arch, I don't *have* to tell you everythin' or anythin'," she said steadily.

"Reckon you don't, to be fair aboot it. But you ought to. Poor ole Dad is done, an', wal, I reckon Ma's no good. I'm no good, either, fer thet matter. But I'm your brother, Molly."

BULOVA
Watches

RITA
$65

GARFIELD
$50

Presenting the Watch Ensemble—
with flexible band or bracelet to match

JUST as Bulova has always represented the ultimate in timekeeping, so it represents the ultimate in fashion.

You will see no more exquisite examples of Style in wrist and strap watches than these *Ensembles* by Bulova. In each, the band or bracelet has been conceived as part of the whole, designed to harmonize perfectly with the case.

For the lady, there are watches with bracelets in charming filigreed designs, many with jewels in the bracelet to match the jewels set in the case.

For the man, there are watches with varied types of flexible and mesh bands, rich in beauty—masculine in sturdiness.

It is well to remember in viewing these examples of advanced watch style, that each holds a movement incorporating every important improvement in timekeeping construction, many of which are exclusive with Bulova.

Your jeweler is now showing the new Bulova *Ensemble* watches—priced from $25 to $2,500. They vary in price only as they vary in design—each a dependable timepiece.

BULOVA WATCH COMPANY • FIFTH AVE., NEW YORK
In Canada: Sterling Tower, Toronto

RITA, 15 jewel movement; set with 2 diamonds and 4 emeralds (or sapphires); flexible bracelet with stones to match . $65

. . .

GARFIELD, 17 jewel movement; complete with woven mesh band $50

LISTEN IN NIGHTLY FOR BULOVA RADIO TIME ANNOUNCEMENTS

She had never heard him speak like that before.

"Arch, you—you don't trust me," she faltered.

"Thunder! It's only the last few days thet I seen you was old enough to mistrust."

"Then—how can I confide in you?" she asked simply.

"Molly, are you goin' to make me choke thin's out of you?"

"I'm not anxious aboot it."

"Wal, then, are you sweet on this Diamond cowboy?"

Molly told him bluntly just what she thought of Jocelyn.

"Wal, I'll be dog-goned. I been given to believe you was sweet on him."

"Somebody lied. I haven't any use for Jocelyn. If you want to know, I'll give you the straight goods aboot him—so far as I am concerned—but Arch, I'd a good deal rather not tell you. It'll make you mad, an' probably run you into another fight."

"Molly, it's no shore bet thet Jocelyn an' I won't fight anyhow. Seth has been talkin' too much for Jocelyn. He's too anxious. There's somethin' up. It looks to me like Jocelyn wants to double-cross the Diamond an' somehow throw in with the Cibeque. I'm not shore. But I don't take to the puncher. Mebbe I'm cross-grained. Mebbe it's because he's throwed a gun heah an' there. All the same if he'd double-cross Traft, he'd shore do the same by us."

LONG before Arch had concluded that speech, Molly had made her decision to hold back nothing, though at the thought that he might ask pertinently about Jim Traft, her heart came into her throat.

"Arch, you're on the track," she replied swiftly. "Jocelyn has quit the Diamond. Had a fight with—Jim Traft, he said, an' jumped at a chance to quit. He had a black eye, a cut lip, an' some other fish marks. An'—an'—" here Molly paused to relieve the oppression in her breast, and failed to do it. "Jocelyn tried to bully me into lyin' to you. Wanted me to tell you he'd quit the Diamond because—because Jim Traft had insulted me. Then he could throw a gun on Traft!"

Slinger Dunn whistled long and low, and afterward muttered a deep curse. His brown hand shot out like the strike of a snake and snapped a dead twig of cedar.

"Molly, you've shore cleared up part of this heah deal," he said gratefully. "I'll bet a hundred Jocelyn aimed to throw in with the Cibeques."

"That's what he said, Arch," rejoined Molly, and impelled by released emotion, she began at the point where Jocelyn waylaid her on the trail and she recalled every word and action of that encounter.

"So much fer Hackamore Jocelyn," muttered Dunn. "I wonder now—I jest wonder what cairds Seth holds—or if it is his deal."

"I wouldn't trust Seth Haverly with his grandma's spectacles," said Molly.

"Wal, Molly, mebbe I'd better take your hunch. But I cain't believe Seth would double-cross me, leastways with a puncher from the Diamond. An' thet brings us to real talk!"

Molly had only to look up to realize that herself. Dunn fastened a hand in her blouse, and, with a slow pull, he drew her up so that her eyes were scarcely a foot from his.

"What's this I heah aboot Jim Traft insultin' you?"

"I—I don't know what you heahed, Arch—but it's a lie."

"Did you meet him?"

"Yes, at the fair."

"An' went to thet dance with him?"

"Oh, no. I went with Mrs. See. . . . But Jim Traft came—an' I—I danced with him once."

"An' thet's all? You wasn't out in the moonlight with him, on the porch?"

"Yes—we walked out a—a little."

"An' he grabbed you an' hugged you?"

"Y—yes, Arch—he did."

"You let him?"

"He's big an' strong. . . . what could I—I do? But at that I slapped him."

"Which was proof you felt insulted. So how's it come you say you wasn't?"

"Listen—Arch—an' don't choke me," she gasped. "I—I wasn't honest with him. The truth is—I took to him—somethin' outrageous. An' he must have guessed it. . . . But when he—he had me in his arms—I hit him. I—I wanted him to believe I *was* insulted. He'd taken me for a girl far above one from the Cibeque. . . . But I really wasn't insulted—an' when I hit him I wasn't honest. An'—an'—"

Molly reached the subtlety of a woman in her instinct to protect Jim Traft. And she seemed to divine that her brother might not know more.

"Took to him somethin' outrageous!" ejaculated Arch incredulously. "Molly Dunn!"

"Yes, Molly Dunn," retorted the girl, gaining courage with resentment. "Even if I do belong to the Dunns of the Cibeque, I've got a heart!"

"I ain't blamin' you, Moll," he returned, as if realizing the inevitableness of the fact, and he let go of her. "You're only a kid. An' he's shore a good-lookin' fellar. An' he can talk. But, Molly, the thing is he's old Jim Traft's kin. He's worth a million. An' he couldn't have no honest intent toward you."

"I'm no fool, Arch, if I am a kid," she rejoined. "I know when a man means bad by me. Lord knows I've had reasons to. I shore knew today when Jocelyn grabbed me. . . . But Jim Traft didn't mean bad. I swear it."

"MOLLY, he must have talked you out of your haid," said Dunn, amazed.

"No. He didn't waste any time talkin'. I'd hardly got out into the moonlight. . . ."

He shook his shaggy head doggedly.

"You cain't tell me honest thet Jim Traft didn't make you feel you was Molly Dunn of the Cibeque."

"No, Arch, I—I cain't. He did. He was shore surprised. An' he let out what he thought. Afterward he tried to—to soften it. But—but then my heart was broke."

Dunn made a swifter and more expressive movement with his hand, passionate and vindictive.

"Hurtin' your feelin's thet way is a wuss insult than huggin' you," he declared, with a note of pathos in his anger.

"It hurt like sixty, Arch. But he didn't mean it. There *is* a difference between Molly Dunn of the Cibeque an' Jim Traft from the East—rich, educated, with family name."

"Ahuh. You said it, Molly. Family name. You're daughter of old John Dunn. An' sister to Slinger Dunn!"

"I told him that."

"Before or after?"

"It was after, of course."

"Shore, it was. No, Moll, there ain't no overlookin' thet. He was only playin' with you. Shore, in some safer place he'd gone farther."

"*No!*" cried Molly, poignantly hurt, as if at the thrust of a blade.

"An' you're givin' it away thet you'd let him go as far as he liked."

"Oh, Arch! How can you—talk so!" sobbed Molly. "That's a lie. *You're* insultin' me."

He shook his head gloomily and averted his blazing eyes, to hide their thought from her. Then he strode away, leaving her there trembling and stricken.

FOR days Molly lived in a perpetual state of nervous dread of events that had cast their shadows.

Arch remained in one of his brooding moods. He worked in the fields as if to make up for lost time. And he did not go to the village in the evenings. The Haverlys rode over every day or so and engaged him in long talks, which left Arch more taciturn than ever.

Then one morning when Molly came down she saw Arch's horse saddled and carrying a small pack.

"Where are you goin', Arch?" she asked at breakfast.

"Up on the Diamond, an' I reckon you better stick around home," he replied gruffly.

"What're you—goin' for?" she dared ask.

"Wal, fer one thing, to see if this outfit is lyin' to me. I didn't tell you thet Seth an' his new pard swear they posted a notice up north of the Diamond. They laid down the law fer thet drift fence. The Cibeque wouldn't stand fer the fence goin' farther than the haid of East Fork. Thet's in the saddle just under the Diamond. An' if it was built farther it'd be laid down pronto."

"What *else* you goin' for?" added Molly anxiously.

"Wal, I reckon you ought to know," he replied, with a dark glance on her.

Molly, in trepidation, followed him out to his horse, where her mother would not hear. She laid a trembling hand on him, as he was about to mount. She did not know what to say. But terror of something possessed her. "Arch, if you really love me you—you won't—"

He stared down at her, arrested by her agitation if not her words.

"Who ever said anythin' aboot me lovin' you?" he asked.

"No one. But you *do*, don't you?" she implored. "Somebody must love me or—or I cain't live."

"You seem to've been tolerable healthy all along," he drawled. Nevertheless he evaded the question.

"I've only you to help me, Arch," she went on swiftly. "I'm tryin' hard not to run true to what they expect of Molly Dunn. An' I can be drove too far. I'll hate you if—if you—"

But he was flint.

"You *have* run true to the Dunn's, I reckon," he replied bitterly, and rode away.

(To be continued)

The Mountain Soliloquizes

I am the patriarch of ranges—Mount Rainier—the Great Snow Peak, deified by aborigines.

I come of fiery origin; my crest, my sides torn by the volcanic blasts that created me. I have known the cold and the wild life of the Arctics. To me still cling remnants of that ancient, icy mantle.

I dwell in a kingdom of enchantment, discovered a century and more ago by the navigator Vancouver.

I have gazed, for ages, upon a wondrous terrain, upon the placid Pacific's waters. I have watched the coming of Indians, explorers, trappers, fishermen, pioneers; their shacks and tents into mighty cities grow. I have lured men—then turned them back. The legend of Hamitchou reveals the wrath visited on the wise man of the Squallyamish, who coveted the precious shells of my crown. History tells of Kautz's perils as he sought my summit in '57. And it tells, too, of man's triumph when Stevens and Van Trump scaled my slopes in '70.

No more am I defiant. Age has made me cordial, friendly. Happy throngs visit my National Park throne room—for glorious fun on my glaciers, snows and flower-carpeted Alpine meadows.

For these companions, I am grateful; also to The Milwaukee Road, the only railroad to my threshold, which has interested hundreds of thousands of people in me and enabled me to give them enjoyment.

Visit the romantic Pacific Northwest. See Mount Rainier. Know the joy of Winter sports in mid-Summer. Wander in verdant valleys. Memories of the trip will never leave you.

For a copy of Mount Rainier National Park Folder, or any other information concerning this railroad, address The Milwaukee Road, Room 867-E, Union Station, Chicago

Soft Gums *need more than* nice flavor

They need this medicated powder that puts *results* ahead of taste . . . . . .

DESPITE faithful brushing with flavored pastes, gum troubles steadily increase. No wonder! As your dentist will tell you, soft, easily-irritated gums need the stimulating action of a powder that concentrates on *results* instead of taste.

Pyrozide Powder has done this for twenty-two years. It is not flavored. It contains *only* those gum-stimulating and tooth-cleansing agents that dental clinics have proved most effective. It is medicated with Dentinol, used by dentists to promote gum healing. Its distinctive taste comes from its Dentinol medication.

Scientifically compounded, Pyrozide Powder allays gum irritation and helps make soft gums firm and resistant. It keeps the teeth clean and white by removing the daily deposits of salivary secretions which, if not removed, harden and form tartar.

Today, largely on dentists' prescriptions, more people than ever are turning to it for gum protection. If you wish, begin by using it for just one of your daily brushings instead of your usual paste. The improvement in the condition of your gums will soon be so noticeable that you will use this sterilized, medicated powder exclusively. The economical dollar package contains six months' supply. At all drug stores.

THE FAMILY'S PROBLEMS

We Take Our Frugality In Capsule Form

THE old-fashioned habit of saving money seems to have fallen into some disrepute. All the big fellows nowadays are saying that the thing to do is earn more and spend more, and somewhere in this process become well off. No doubt that plan is all right for those who are in close touch with markets and other money-making opportunities. But what of us millions who are just salaried folks, with not much chance to earn a great deal more? How shall we ever get that first operating capital to indulge ourselves in what they call "intelligent extravagances"? My husband and I have thought hard about this, and have concluded to stick to our policy of saving.

Now, the trouble with saving is that it is slow, and, oh, so dull! If there were only some way to make it interesting! We found ourselves falling behind our goals because we were not sufficiently interested in watching the savings increase. That was four years ago, when our income was three hundred a month. It is now three hundred and fifty, and we have for more than two years been playing a game with our extra money. This game makes the process of putting money in the bank a fairly entertaining one, for there is a premium attached to it—a premium which we give to ourselves. That is, we take thrift in capsule form, so that it will not taste bad!

Every time we put a dollar into the savings account, we allow ourselves another dollar to spend on something that is not absolutely necessary. For instance, suppose we want to buy something that costs twenty-five dollars and is not imperatively needed. First, we must get twenty-five into the account, and then, under our rules and regulations, that other twenty-five may be spent. At present we are saving toward the purchase of an electric refrigerator, and already have two hundred dollars saved and two hundred waiting to be spent. That's more than enough to make a first payment on the refrigerator, but we are trying to pursue a cash policy in regard to these bigger expenditures. (However, if the weather gets any hotter, I think we'll weaken and buy that refrigerator on a part-payment plan.)

We worked this same scheme when we got a good radio—put money week after week into the savings account, and week after week into our "extra" account, and finally got the radio. It's a grand and glorious feeling to make a purchase in this way, for it doesn't seem at all like an extravagance; in fact, it seems like a saving.

I have just gone over our accounts for the past two and a half years, and here is what our savings-game has resulted in:

Vacuum cleaner	$45.	Savings $45.
New gas stove	55.	Savings 55.
Living-room table	60.	Savings 60.
Books	30.	Savings 30.
Pictures	30.	Savings 30.
Summer trips	300.	Savings 300.
Sleeping porch	300.	Savings 300.
New rug	150.	Savings 150.
Pedigreed dog	50.	Savings 50.
Totals	$1,000	$1,000

That thousand dollars in the savings account is, according to present-day viewpoint, just idling there. One of our friends urges us to take it out, buy something on margin with it, some stocks; then watch the market and sell when the stocks go up. I know, and so does my husband, that money is made by those who take such chances. Not many men, in this day and generation, will ever become rich through putting money into savings banks. But we do not know anything much about stocks—that's a phase of life that, for us, does not have reality. We read in the papers, of course, about the new millionaires so suddenly made: the bootblacks going to Europe on their earnings in the stock market, and all that sort of thing. Maybe we should feel ashamed of ourselves for not keeping in closer touch with the financial doings on Wall Street—but, somehow, we are not ashamed.

I HAVE concluded, and so has my husband, that people live the kind of lives their friends live. If we got our salary from a broker, we should no doubt buy stocks; or if it came from a bank, we should no doubt learn something of the financial life, become interested in it, and make some money. But we live in a town of thirty thousand where my husband is employed in railroading. He gives his thoughts to his job. I doubt that he ever looks at the stock quotations in the newspaper, any more than he does at the society column. His attitude is that such things are all right for those who understand them, but that he doesn't understand them. His best friends are the local superintendent of schools, the railway yardmaster, the pastor of our church, the chief of police, and a big farmer who lives five miles out from town. In the main, the wives of these men are my best friends. We often see one another, but the talk is never about stocks and bonds. Such things are not in our line of vision, and I guess we'll have to go on living as we are now, saving and spending and having a pretty good time. Our plan suits us, and we are the only ones who need to be suited by it. Given health and continued raises, which we have every right to expect, we'll have fifty thousand by the time we are fifty—and that's not so bad.

"The Better Half of Beauty ~ THE BEAUTY THAT LIES WITHIN"

It keeps time Beautifully

THIS GREAT AMERICAN WATCH

THE NEW ILLINOIS PICCADILLY, *17 jewels, 14k gold-filled case, raised figure dial with luminous dots, $45. Other men's strap watches from $40 to $75.*

THE NEW THIN ILLINOIS A. LINCOLN, *19 jewels, solid gold, $110. Other men's pocket watches from $40 to $120 and more.*

THE ILLINOIS EDGEWATER, *17 jewels, 14k gold-filled, $50. Other ladies' ribbon watches from $50 to $75 and more.*

The beauty of an Illinois Watch is more than case-deep. It only begins there. Inside is a marvelous beauty of precision which alone makes a watch worth having.

That is why an Illinois watch keeps time—beautifully. And you can own one—a truly beautiful watch—in some models that cost as little as forty dollars.

It takes from eight months to a year to make an Illinois Watch. Many long hours to attain its almost unbelievably fine adjustments; weeks and months of timing, testing, proving at every step, so that when an Illinois Watch reaches the jeweler who sells it to you, it is a timepiece in every sense—good for years to come.

And because such workmanship deserves a setting of comparable beauty, you will find the Illinois Watch encased in many exquisite designs which express the decorative trend of today's styles with most authority and charm.

All this you buy in an Illinois Watch. That is why the watches shown on this page represent such unusual values. And that is why, for over fifty years, the Illinois has been recognized as more than a fine watch—a great American watch.

Ask your jeweler to show you his Illinois Watches—the new models for men and women. He will tell you how good they are. For it's his business to know watches.... and he has known Illinois ever since he's been in business.

Let us send you, without obligation, the Illinois Book of Watches. It illustrates a wide choice of models, with the price of each. Simply address Dept. A, The Illinois Watch, Springfield, Illinois.

The American Magazine

GENIUS has been variously described and defined, but has it ever been defined as the ability to see the obvious? If not, some definition makers have overlooked a good bet, for that, frequently, is what genius comes down to. The men who have made great fortunes have seen something that anyone else might have seen; the men who have invented universally used devices have often just worked out an obvious idea to fit an obvious need.

In the early stages of its life, the automobile was thought to be something for the rich, but Henry Ford saw the obvious — he saw that everyone wants to get from place to place, and that those of moderate means need to ride just as much as do the rich. He is called a genius because of what he saw and what he did about it, when all that he saw was an obvious need.

Whoever made the safety pin saw, and filled, an obvious need. And so it goes. There is always a big market for anything that meets an obvious need or fulfills a great desire.

"The best 'tips' of all," says Bernard M. Baruch in this issue of THE AMERICAN MAGAZINE, "are written so large that anyone with imagination can read and profit by them, while if the world only knew how many 'inside tips' prove disastrous, it would quickly lose its faith in this supposed fountain of easy wealth."

Facts, upon which intelligent courses of action may be laid out, are usually at hand. The men who assemble these facts, study them, and correctly interpret them often become what we call geniuses.

That's an obvious truth, you say. And so it is. The thing to do is to profit by it.

THE EDITOR.

Let this tooth paste take you and the kids to a party

Take the youngsters to the movies on what you save by using Listerine Tooth Paste at 25¢ instead of dentifrices in the 50¢ class. The average saving is $3 per year per person, assuming each person uses about a tube per month. Spend it as you please.

Remember this, you young mothers, who are keeping a budget

IT is good news to most young people starting out in married life that a dentifrice of such outstanding merit as Listerine Tooth Paste can be bought for 25¢.

That saving of $3 per year per person (see top of page) is appreciated when there are so many old and new expenses to be met.

When we decided to produce a tooth paste we were determined that only the finest ingredients should compose it. We wanted it to be worthy of the Listerine name. And we determined to sell it at 25¢ because that is the price intelligent people think is a fair one for a dentifrice. Its reception was enthusiastic. Now millions use it, discarding older and costlier favorites.

We urge you to try Listerine Tooth Paste one month. Note how brilliant and white it leaves your teeth. How it tones up your gums. And note particularly that delightful after effect which you associate with Listerine itself. Lambert Pharmacal Company, St. Louis, Mo., U. S. A.

CREATORS OF THE MODE

HER FROCK BY WORTH . . . HER CAR BY HUPMOBILE

55AM

When the Prince of Wales appears in new style riding clothes, the world hears about it instantly. Because they are smart and right and there's authority back of them . . . It was that way with the new Century cars. Smart and right, and backed with twenty years of HUPMOBILE engineering authority. Other cars complimented the new Century style by fashioning after it. But HUPMOBILE remains a step ahead and an idea ahead. Surface details may be duplicated, but not the distinguished ensemble created by twenty years of creative designing in the automotive field. That remains wholly HUPMOBILE'S . . . and at this very tick of your watch, it is still dated twenty months ahead! . . . The CENTURY SIX $1345 to $1645 . . . The CENTURY EIGHT $1825 to $2625 . . . Custom and standard, all prices, f. o. b. factory . . . Equipment, other than standard, extra.

THE NEW CENTURY SIX & EIGHT HUPMOBILE

The happy ending . . .

Did you win or lose the game? Well, it is history now, and be the score what it may, there is a happy ending. The grand finale to every session of sport is a warm, cleansing Ivory bath.

Quickly! Into the tub before your muscles stiffen. Jump in, if possible, while you are still ruddy from the game. Express your glowing mood with a whistle or song . . . but steep your body in absolute laziness until your play-bound muscles run smooth and supple again . . .

Now—you can stir! And your cake of Ivory Soap comes rollicking over the bath-tub waves. Ivory is the buoyant play-fellow that dares you to try to duck it! The generous floating bath-friend that covers you with thousands of gay, cleansing bubbles.

A tingling shower or spray to finish with. And tomorrow no twinging regrets that you played so hard, because you have taken the right kind of bath today!

Wise sports-lovers know that sun-and-wind-touched skin needs the care of a soap which comforts while it cleanses. So they naturally use Ivory Soap . . . safe for babies, safe for lovely complexions . . . as soothing, refreshing and gentle a soap as money can buy.

. . . kind to everything it touches · $99^{44}/_{100}$ % Pure · "It floats"

Teachers KNOW which are the *cleanest* homes

SCHOOL children from nice homes have an advantage . . . are better liked, get more consideration, have better times.

And it's that way all through life. Everywhere we go the people we meet are sizing us up. Very quickly they decide that we are, or are not, from nice homes.

What counts most in winning this ready acceptance? Isn't it *cleanliness?* . . . the deep seated and habitual kind, that must be taught young?

Parents are judged by their children

Teachers cannot help judging one child against the cleanliness of others. Nor can friends or neighbors.

Every child is a little ambassador of his home, and his appearance represents its standard of cleanliness.

Do children take enough baths?

No mother would fail to bathe her small baby every day. For older children, however, daily baths are frequently thought not so necessary. Is that true? Think of the dust and dirt that youngsters get into, and the germs that baths wash away. Also, the daily bath clears the pores of perspiration waste. Many a fine, clear complexion is endangered by clogged pores in early life.

The "inspirational" method

When it comes to clean clothes there are three principal ways in which mothers can help:

1. By correcting that guilty family feeling that, above all else, "We must keep down the size of the wash this week";

2. By keeping drawers well *filled* with clean clothes...for father, sister, brother;

3. By being a good advocate herself of fresh, clean clothes, even in the mornings around the house.

It is also mother, and no one else but mother, who must see to the regular changing of bed linen . . . both sheets at least once a week. (Twice a week is better yet.)

Pillow-cases should be changed twice as often as sheets because they soil so quickly as restless heads grind into them the dirt carried from the dusty activities of the day; and because, too, the pillow-case is exposed to daytime house dust.

Women who cook must wash more often

Careful housewives must also manage:

1. Always to wash before turning to the preparation of food;

2. Always to wash after sweeping, dusting, or other household tasks;

3. To so schedule the sweeping, dusting and cleaning that the whole house, every day, is a splendid lesson in the cheerfulness and importance of cleanliness.

"The brightest corner on earth"

Clean, genial, cordial homes . . . is there anything finer? . . . or anything that can be counted on more surely to teach a deep-down, daily lesson of all-around cleanliness?

And isn't it those seemingly secondary things like fresh curtains, scrubbed woodwork, and clean linens regularly that have most of all to do with making any place, modest or pretentious, a happy haven . . . a real *home?*

Published by the Association of American Soap and Glycerine Producers, Inc., to aid the work of CLEANLINESS INSTITUTE, *45 East 17th Street, New York.*

Name your beard, Gentlemen

BEARDS are past reforming. Blue and bristly or blond and silken, they're all hard to shave—at least you can't tell their owners otherwise.

We don't try to.

It's easier to put the burden on the blade; to use the best and most expensive steel and to spend, as we have, some $12,000,000 in the past ten years to develop precise and delicate machines that hone and strop that fine steel far beyond the limits of human craftsmanship. It's easier to pay a bonus to workers for every blade they reject which does not come up to the high Gillette standard.

True, it makes some difference whether your beard is heavy or silken, your skin sensitive or tough; whether the water is hot or cold, hard or soft; whether you slept well or badly the night before.

But even under the worst possible conditions you can count on the Gillette Blade to do its job smoothly, surely and well. It's the one constant factor in your daily shave. Gillette Safety Razor Co., Boston, U. S. A.

THE NEW FIFTY-BOX. Fifty fresh double-edged Gillette Blades (10 packets of fives) in a colorful chest that will serve you afterward as a sturdy button box, cigarette box or jewel case. Ideal as a gift, too. $5.00 at your dealer's.

VACATION OFFERING EXTRAORDINARY
5 NATIONAL PARKS IN ONE LOW COST TOUR

You wouldn't believe so much of the grandeur of the West could be seen in a single two weeks' tour! The geysers, canyons and great cataracts of Yellowstone . . the sheer, soaring summits of Grand Teton, our newest National Park . . . the majestic towers of Zion Canyon, rising like great altars, nearly a mile into the blue Utah sky . . . Bryce Canyon, a new National Park, entirely different from all others in its fantastic sculpturing and rainbow colors . . and, finally, the overpowering immensity of Grand Canyon, the most awe-inspiring spectacle in the world!

All these! And a host of fascinating sights on the way: colossal forests, friendly wild animals, snow capped mountains, Alpine lakes, wild flowers, quaint Mormon villages, Rocky Mountain National Park, Great Salt Lake . . . every hour of this greatest of American scenic tours brings something new and thrilling.

An exclusive Union Pacific offering, it can be made independently or by Escorted All-Expense Tours with interesting people as companions. You go on the finest trains via Chicago, St. Louis, Kansas City or Omaha. And the cost is amazingly low. Mail coupon below for full information.

Old Faithful Geyser—Yellowstone National Park

Great White Throne—Zion National Park

Temple of Osiris—
Bryce Canyon National Park

Grand Canyon
from Grand Canyon Lodge

C. J. Collins, General Passenger Agent, Dept. 338
Union Pacific System, Omaha, Neb.

Please send me complete information including cost, and booklet: Western Wonderlands (tells about *all* the West). I am also interested in:

☐ Zion-Bryce Canyon-Grand Canyon National Parks
☐ Yellowstone ☐ Pacific Northwest and Alaska
☐ Colorado ☐ Hawaii ☐ Escorted All-Expense Tours
☐ California ☐ Dude Ranches

No wonder the Joneses have such a *colorful* home

They all use "Rogers"

ROGERS
THE MARK OF QUALITY

BRUSHING LACQUER

ROGERS"—the wonderful home lac-
quer—isn't for the use of folks with
istic talents alone. It is for every mem-
r of the family. Even the inexperienced
auber" can use "Rogers" successfully.
t is ideal for boys—fired with impa-
nce—who want finished results at once.
Mother and the girls find "Rogers" a
t—for keeping living room, bedrooms,
chen, all bright and cheery with smart,
orful things.
nd Dad, of course, gets a big kick out
he ease and speed with which "Rogers"
nsforms everything that needs a new,
able, colorful finish.
hat is why millions of homes like the
nes's" are always colorful and inviting.
ou haven't tried this wonderful guar-
eed home lacquer as yet, start now.

No experience is needed to use dependable Rogers Brushing Lacquer. Anyone can use it successfully. Simply flow on the rich "Rogers" colors with a full brush. "Rogers" quickly levels itself.

Dries While You Wait

Then it actually "Dries while you wait." Dries smooth—no laps nor brush marks. Dries before dust can settle in.

Dries in time for any urgent need, and is often a life-saver. Dries to a tough, hard, porcelain-like finish that wears and *wears* and WEARS.

"Rogers" colors are very beautiful—and modern. There are 26 standard colors. In addition there are black, white, clear and six new, rich, dark colors suited to outdoor as well as indoor uses. These darker shades are designed for hard usage.

There is only one genuine "Rogers." It is sold by leading paint, hardware and department stores everywhere. To be assured of satisfactory results, demand the familiar "oriental" container shown here. Read the "money-back" guaranty printed on this page. Detroit White Lead Works, Detroit, Michigan, Makers of Highest Grade Paints, Varnishes, Colors, Lacquers.

Sheaffer Lifetime° Desk Fountain Pen and Pencil Set, Brazilian Onyx Base, $35

Utility Clothed in Beauty— a standing invitation to write

In office and home, Sheaffer Lifetime° desk fountain pen and pencil sets are outward evidence of inward efficiency and taste. Their universal receptacles always return to the correct writing angle, and keep ink from the fingers. The pens fit your hand. At first touch to paper they write flowingly, without effort, yet positively enough to give three carbon copies of personal letters. And understand, please, that with these sets we do not merely sell you fine pens—we sell you a lifetime writing service. See and try them. You will not choose to be without.

Identify the Lifetime° pen by this white dot

Sheaffer Lifetime° pens are guaranteed unconditionally for your lifetime.
